# CONTENTS

<b>1. More Than Just Plasmids: Newly Discovered Gene Transfer Agents and Their Implications for Controlling the Spread of Resistance</b> .....	1
<i>Abigail A. Salyers and Nadja B. Shoemaker</i>	
Genes on the Move .....	1
What's New in Gene Transfer Elements? .....	5
A Possible Role for Antibiotics in Stimulating Resistance Gene Transfer .....	14
What Are the Selective Pressures That Lead to the Evolution and Maintenance of Antibiotic Resistance Genes? .....	16
<b>2. Gene Cassettes and Integrons: Moving Antibiotic Resistance Genes in Gram-Negative Bacteria</b> .....	19
<i>Ruth M. Hall, Gavin D. Recchia, Christina M. Collis, Heidi J. Brown and H. W. Stokes</i>	
Introduction .....	19
Mobile Gene Cassettes .....	21
Integrons and the Cassette Integration System .....	21
Expression of Cassette-Associated Resistance Genes .....	26
Cassettes Go Astray .....	27
Structure of Class 1 Integrons .....	28
Origin of Resistance Genes in the 3'-Conserved Segment .....	30
Tn21 and Integrons .....	31
Conclusions .....	31
<b>3. Antibiotic Resistance: Merely the Tip of the Iceberg of Plasmid-Driven Bacterial Evolution</b> .....	35
<i>Carlos F. Amábile-Cuevas and Maura Cárdenas-García</i>	
Introduction .....	35
Plasmids: A Possible Target for Antimicrobial Therapy .....	51
Summary .....	53
<b>4. Bacterial Regulated Responses Resulting in Antibiotic Resistance</b> .....	57
<i>Carlos F. Amábile-Cuevas and Ana M. Fuentes</i>	
Introduction .....	57
Summary .....	69

<b>5. Antibiotic Usage and Antibiotic Resistance in Latin America .....</b>	<b>73</b>
<i>Juan J. Calva, Alina Niebla-Pérez, Vidal Rodríguez-Lemoine, José I. Santos and Carlos F. Amábile-Cuevas</i>	
Introduction .....	73
Discussion .....	90
 <b>6. Atomic Genetics and Structure-Function Studies of PSE-4: A Model Enzyme for Class A <math>\beta</math>-Lactamases .....</b>	 <b>99</b>
<i>François Sanschagrin, Christian Therrien, Esther Thériault, Noureddine Bejaoui, Daniel Dubois and Roger C. Levesque</i>	
Introduction .....	99
PSE-4 as a Prototype Carbenicillinase .....	100
Homology with Other $\beta$ -Lactamases .....	103
Multiple Alignment of Carbenicillinases .....	106
Three-Dimensional Structure of the PSE-4 Enzyme .....	108
Structure-Function Studies via Atomic Genetics .....	111
Function of Amino Acids near the Serine 70 .....	112
Hybrid Proteins and Omega Loop ( $\Omega$ ) Replacements in PSE-4 .....	115
Random Replacement Mutagenesis from Leucine 161 to Aspartic 179 in the PSE-4 Omega Loop .....	116
Regions 216 to 221 in PSE-4 and Defining Inhibitor Binding in the Active Site .....	120
The $\beta$ 3- $\beta$ 4 234 to 245 Region .....	124
Conclusion .....	125
 <b>7. Imipenem Resistance Mechanisms .....</b>	 <b>133</b>
<i>Alina Niebla-Pérez and Ileana González-Bonet</i>	
Enzyme-Mediated Resistance .....	134
MBLs Are Widely Distributed .....	134
Plasmid-Mediated MBLs .....	136
Other Classes of $\beta$ -Lactamases Conferring Imipenem Resistance .....	136
Homology Between MBLs .....	137
Clinical Significance of $\beta$ -Lactamases in Imipenem Resistance .....	138
Resistance to Imipenem by Other Mechanisms .....	139
Concluding Remarks .....	141

<b>8. Molecular Aspects of Fluoroquinolone Resistance .....</b>	<b>147</b>
<i>Lidia Yolanda Fuchs, Fernando Reyna, Lilia Chihu and Berta Carrillo</i>	
Introduction .....	147
Mode of Action .....	148
Resistance Mechanisms .....	149
Decreased Drug Accumulation/Outer Membrane Modification .....	162
Efflux Systems .....	165
<i>Mar</i> Locus .....	166
<b>9. Possible Alternatives to Standard Antibiotics in the Management of Infections with Antibiotic-Resistant Organisms .....</b>	<b>175</b>
<i>Richard P. Novick</i>	
Introduction .....	175
Bacteriocins: Lysostaphin and Nisin .....	177
Interference with the Expression of Virulence Factor .....	182
Interference with Signal Transduction .....	188
<b>10. Concluding Remarks .....</b>	<b>193</b>
<b>Index .....</b>	<b>197</b>
