# Engineering Geology Applied to the Design and Operation of Underground Coal Mines

By C. Richard Dunrud

U.S. GEOLOGICAL SURVEY BULLETIN 2147

---

UNITED STATES GOVERNMENT PRINTING OFFICE, WASHINGTON : 1998

# CONTENTS

Introduction .....	1
Results of Experience.....	1
Purpose.....	1
Geologic Mapping.....	1
Compilation of Geologic Maps.....	1
Genesis of Coal-bearing Rocks.....	18
Properties of Rocks .....	24
Remote Sensing Applied to Geologic Mapping.....	25
Subsurface Geologic Studies.....	28
Geotechnical Studies.....	37
Field and Laboratory Tests on Coal and Rock.....	37
Engineering Properties and Deformation Characteristics of Rocks.....	43
In-situ Stresses .....	45
Petrophysical (Geophysical) Logging.....	47
Coal Mining Methods and Mine Support Procedures.....	53
Current Mining Methods.....	53
Panel-Pillar Mine Geometry .....	53
Mining Methods Used Under Various Geologic Conditions.....	54
Mine Support Procedures.....	65
Coal Mine Deformation .....	68
Failure Within the Mine Workings .....	68
Coal Mine Subsidence.....	85
Coal Mine Fires and Explosions .....	109
Mine Site Selection, Design, and Operation .....	115
Mine Site Selection Phase.....	117
Mine Design Phase.....	117
Mining Phase.....	128
References Cited .....	128

## FIGURES

1. Field geologic map and vertical stereo aerial photographs of coal-bearing rocks in the Cedaredge area, Delta County, Colo. ....	3
2. Profiles showing general stratigraphic framework of the coal-bearing rocks of the Mesaverde Formation in the Paonia-Cedaredge area, Delta and Gunnison Counties, Colo. ....	5
3. Diagrams showing classification of faults caused by various stress conditions, based on the Mohr and Coulomb theories.....	11
4. Rose diagrams showing the relation between the trends of cleat, joints at the outcrop, and lineaments.....	12
5. Profile showing structural relations between sedimentary rocks and laccoliths in the Paonia, Colo., area.....	15
6. Profile and logs showing effects of complex intrusive bodies on coal beds in the Eocene Ashford coal field, Pierce County, Wash. ....	16
7. Sketch map, cross section, and photograph showing landslides in the Somerset area, Delta County, Colo. ....	17
8. Sketches and block diagram of models of various depositional environments.....	20
9. Generalized stratigraphic column in Appalachian Basin relating lithology to ratio of rainfall-to-evapotranspiration	21
10. Diagram showing general relationships between peat-forming paleoenvironments and resulting coal quality in Central Appalachian Basin.....	22
11. Diagram showing classification of sedimentary rocks by lithology, grain size, and matrix.....	24

12. Diagram of transmission coefficients of electromagnetic (EM) radiation through the atmosphere as a function of wavelength .....	26
13. Diagrammatic profile showing a rotary drill bit, circulation of mud, and intrusion of mud into sides of drill hole .....	28
14. Plan view showing reliability categories of outcrop and drill-hole data for classification of coal resources, based on distance from points of measurement .....	29
15. Geologic logs showing lithology, relative resistance to weathering, grain size, and internal characteristics .....	30
16. Semivariogram of coal thickness showing data points fitted to a spherical model .....	33
17. Map of Anderson coal deposit, Powder River Basin, Wyo., showing estimated thickness determined by Kriging and the semivariogram .....	34
18. Map of Anderson coal deposit showing estimated Kriging variances .....	35
19. Tabulation of amount of coal in-place in the Anderson coal deposit, by township, in western Wyoming .....	36
20. Sketches and graph of point-load index strength test .....	38
21. Graph to correct point-load index strength to standard core diameter of 50 mm .....	39
22. Graph showing correlation between tests of point-load index strength and uniaxial compressive strength .....	40
23. Geologic and geotechnical log of a core hole located north of Sheridan, Wyo. ....	41
24. Graphs showing general deformation processes in rocks .....	44
25. Classification diagram of jointed rock masses .....	46
26. Graphs showing relation between vertical and horizontal stress with depth .....	48
27. Sketch of zones around a mud-filled, rotary drill hole in a permeable sandstone .....	49
28. Logs showing relation between lithology and petrophysical logs .....	50
29. Lithologic column and diagram showing relation between geologic and geotechnical properties of rocks from drill core and petrophysical logs, Somerset, Colo., area .....	51
30. Maps of underground mine layouts .....	52
31. Maps showing mining room-and-pillar panels .....	55
32. Mine sketch maps showing common room-and-pillar mining sequences .....	56
33. Block diagram showing a typical retreating longwall system .....	57
34. Block diagram showing a shortwall mine panel layout .....	60
35. Sketch map and cross section showing mining thick coal beds by the double-lift longwall method near Breza, Bosnia-Hertzevovina, [former] Yugoslavia .....	61
36. Sketch map and cross section showing mining thick coal beds by longwall with sublevel caving near Zenica, Bosnia-Hertzevovina, [former] Yugoslavia .....	63
37. Plan and profiles showing a modified room-and-pillar mining method .....	64
38. Diagrammatic cross sections of mine openings showing how thick beams are more stable than thin beams .....	66
39. Photographs of longwall powered roof supports .....	67
40. Photograph showing unstable mine roof in Somerset, Colo., area .....	69
41. Photographs and cross sections showing some causes and effects of mining hazards in Somerset, Colo., area .....	70
42. Photographs and sketches showing structural features that caused severe roof-fall hazards in the Sunnyside coal bed, Emery County, Utah .....	72
43. Photograph and sketch section showing effects of rock "spars" in the "B" coal bed, Somerset, Colo., area .....	74
44. Sketch sections and photographs illustrating unstable mine openings caused by lateral tectonic and mine-induced stresses .....	75
45. Map and graph showing potential hazards from unstable roofs in southwestern Pennsylvania and northern West Virginia .....	77
46. Map and cross section showing conditions caused by rock bursts and bumps in Geneva mine area, Emery County, Utah .....	78
47. Map, cross section, and photographs showing damage caused by rock bursts and bumps, Geneva mine area, Emery County, Utah, Oct. 25, 1967 .....	80
48. Conceptual diagrams showing general relation of vertical stress to unmined coal and goaf areas in longwall and room-and-pillar extraction panels .....	82
49. Mine map location of an outburst in Redstone area, Pitkin County, Colo., 1969 .....	83
50. Photograph and cross sections showing effects of a squeeze, Somerset, Colo., area .....	84
51. Diagrams and photographs showing processes of coal mine deformation and subsidence .....	85
52. Photographs showing caving characteristics at the extraction limits in two room-and-pillar extraction panels .....	89
53. Graph showing maximum subsidence ratio for Western United States and the United Kingdom .....	89

54. Conceptual subsidence maps and profiles .....	90
55. Profile showing laterally constrained plate undergoing downwarping .....	91
56. Coal mining and subsidence map and geologic cross section, Somerset area, Colorado.....	92
57. Coal mining and subsidence map and profiles, Huntington area, Utah .....	94
58. Subsidence graphs and map for predicting limit angle, displacement, tilt, and horizontal strain .....	98
59. Graph illustrating structural damage in relation to horizontal strain and length of structure.....	100
60. Cross sections and photograph showing how faults can control subsidence area.....	101
61. Subsidence development curves for longwall and room-and-pillar extraction panels in Western United States and the United Kingdom.....	102
62. Cross sections of coal mine openings showing changes in stability with dip of a jointed roof .....	103
63. Sketches illustrating initial stages of stoping in thinly and thickly layered rocks.....	103
64. Sketches showing stoping limits controlled by topography, dip of coal, and local presence of strong rocks .....	104
65. Photograph showing stoping process in the Sheridan area, Wyoming.....	105
66. Graph and photographs showing aspects of stoping process .....	106
67. Photographs showing potentially hazardous sudden pit development .....	108
68. Maps, cross sections, and photographs showing block movement above underground coal mines in Colorado and Utah.....	110
69. Maps showing sites of coal explosions in Colorado and [the former] Yugoslavia.....	114
70. Flow diagram showing possible steps in mine site selection, mine design, and operation of underground coal mines .....	116
71. Maps showing thickness of the Pittsburgh coal bed and overburden thickness relative to the Pittsburgh coal bed in southwestern Pennsylvania and northern West Virginia.....	118
72. Fence diagram of the Pittsburgh coal bed and overlying rocks, southwestern Pennsylvania and northern West Virginia .....	120
73. Mine map showing room-and-pillar extraction and longwall mine panels, Huntington area, Utah .....	122
74. Composite map showing mine workings and complex mine roof rocks northwest of Helper, Utah.....	126
75. Maps showing contours of equal percentage of sand in the roofs of two mines in a lower and an upper coal bed, Huntington area, Utah.....	127

## TABLE

1. Maximum allowable subsidence deformations for various group classes of structures in [former] Yugoslavia, Poland, and the former Soviet Union .....

100

## METRIC CONVERSION TABLE

Many of the measurements in this report are in feet, miles, and 2,000-pound tons. For some, metric equivalents are presented alongside. For others, conversion factors are as follows:

To convert	To	Multiply by
Feet (ft)	Meters (m)	0.3048
Miles (mi)	Kilometers (km)	1.609
2,000-lb tons	Metric tons (t)	0.91
