Precision Electroweak Physics at Electron-Positron Colliders

With 107 Figures

 Springer

Contents

1	Electroweak Interactions	1
1.1	Gauge Invariance and Formulation of the Theory.	2
1.2	Parameters of the Theory.	4
1.3	Radiative Corrections.	6
1.4	Beyond the Standard Model.	9
	References.	11
2	The Accelerators SLC and LEP	13
2.1	The Stanford Linear Collider SLC.	13
2.2	The Large Electron Positron Collider LEP.	15
2.3	Calibration of the LEP Beam Energy.	16
2.4	Detectors at Electron-Positron Colliders.	19
2.5	Luminosity Measurement	24
	References.	25
3	Electroweak Measurements on the Z Resonance	27
3.1	Fermion-Pair Production in e^+e^- Collisions.	27
3.2	Measurement of the Z Lineshape.	30
3.3	Forward-Backward Asymmetries.	32
3.4	Tau Polarisation.	34
3.5	Left-Right Asymmetry.	34
3.6	Determination of the Effective Weak Mixing Angle.	35
3.7	Effective Couplings and Weak Radiative Corrections.	36
	References.	37
4	Electroweak Physics Above the Z Resonance	39
4.1	Fermion-Pair Production Above the Z Resonance.	41
4.2	Production of Electroweak Gauge Bosons.	45
4.2.1	Compton Scattering.	45
4.2.2	Single-Z Production.	47
4.2.3	Single-W Production.	49

VIII Contents

4.2.4	Photon Production	51
4.2.5	Z-pair Production	54
4.3	Measurement of Z γ Production	56
4.3.1	Neutrino-Pair Production in Z γ Events	56
4.3.2	Reconstruction of the Z Resonance with Z γ Events	58
4.3.3	Extraction of the Z Mass from the Mass Spectrum	60
4.3.4	Cross Check of the LEP Energy Calibration	63
	References	64
5	W-Boson Pair Production	67
5.1	Simulation of Four-Fermion Production	69
5.2	Hadronisation Models	72
5.3	Colour Reconnection in the $qqqq$ Channel	73
5.4	Bose-Einstein Correlations in the $qqqq$ Channel	78
5.5	Selection of W-Boson Pairs	84
5.5.1	Selection of Fully-Leptonic Events	84
5.5.2	Selection of Semi-Leptonic Events	84
5.5.3	Selection of Fully-Hadronic Events	86
5.6	Measurement of the W-Pair Cross Section	88
5.7	Measurement of W-Boson Polarisation	89
5.8	Triple Gauge Boson Couplings	90
	References	96
6	Measurement of the W Mass at LEP	99
6.1	The W Mass from the Threshold Cross Section	100
6.2	Measurement of the W Mass Using the Lepton Energy	102
6.3	Direct Reconstruction of the Invariant-Mass Spectrum	103
6.3.1	Identification of the Final State Fermions	104
6.3.2	Kinematic Fit	104
6.3.3	Jet Pairing in Fully-Hadronic Events	108
6.3.4	Photon and Gluon Radiation	110
6.4	Extraction of the W Mass	111
6.4.1	Monte-Carlo Re-Weighting and Binned Likelihood Fit	113
6.4.2	Monte-Carlo Re-Weighting and Box Fit	113
6.4.3	Event Likelihood from a Convolution Function	115
6.4.4	Fit of an Analytic Breit-Wigner Function	116
6.5	Systematic Uncertainties	116
6.5.1	Four-Fermion Generation and Photon Radiation	117
6.5.2	Hadronisation	118
6.5.3	Colour Reconnection	120
6.5.4	Bose-Einstein Effects	124
6.5.5	Detector Effects	124
6.5.6	LEP Beam Energy	128
6.5.7	Correlations	129

6.6	Results for W Mass and Width	130
	References	132
7	Fit of Electroweak Parameters to Precision Data	133
7.1	Direct W-Mass Measurement Facing Precision Data	133
7.2	Global Fit to Electroweak Data	135
7.3	Higgs Mass Prediction	138
7.4	Search for the Standard Model Higgs at LEP	140
	References	144
8	Electroweak Physics at an e^+e^- Linear Collider	145
8.1	The Physics Potential of an e^+e^- Linear Collider	146
8.2	Electroweak Gauge Bosons	147
8.3	Precision Measurement of the Top Mass	149
8.4	Higgs Mass and Couplings	152
8.5	Complementarity of a Linear Collider and the LHC	158
8.6	The International Linear Collider ILC	159
8.7	Detector Development for the ILC	162
	References	167
9	Summary and Conclusions	169
