

Carbon in the Geobiosphere — Earth's Outer Shell —

FRED T. MACKENZIE

*Department of Oceanography,
School of Ocean and Earth Science and Technology,
University of Hawaii, Honolulu, U.S.A.*

ABRAHAM LERMAN

*Department of Geological Sciences,
Northwestern University,
Evanston, Illinois, U.S.A.*

Contents

Published Titles in Topics in Geobiology Book Series	ii	
Aims & Scope Topics in Geobiology Book Series	v	
Preface	vii	
Acknowledgements	xiii	
Picture Credits	xvii	
1	Brief Overview of Carbon on Earth	1
1	An Unusual Look at Earth's Shells	2
2	Global Carbon Cycle	7
3	Fundamental Equation of a Cycle and Carbon Flows	14
4	Carbon in Fossil Fuels	18
5	Feedbacks in the Carbon Cycle	21
2	Earth's Volatile Beginnings	23
1	The Major Volatiles	23
2	Primordial Atmosphere-Ocean System	35
3	Carbon Dioxide	40
4	Summary and Speculations	45
5	An Early Biosphere	49
3	Heat Balance of the Atmosphere and Carbon Dioxide	61
1	Heat Sources at the Earth's Surface	62
2	Solar Heating and Radiation Balance	63
3	Greenhouse Effect	69
4	Temperature of a Prebiotic Atmosphere	80
5	CO ₂ and Climate Change	83
4	Mineralogy, Chemistry, and Reaction Kinetics of the Major Carbonate Phases	89
1	Carbonate Minerals	90
2	Calcites	93
3	Dolomite	101
4	Aragonite	105
5	Carbonate Dissolution and Precipitation Kinetics	110
6	Carbonate Precipitation and Dissolution in Marine Ecosystems	115
7	Some Geological Considerations	116
		xix

5	Carbon Dioxide in Natural Waters	123
1	Dissolution and Dissociation of CO ₂ in Water	124
2	CO ₂ Transfer from Atmosphere to Water	133
3	Calcite and Aragonite in Natural Waters	137
4	Degree of Saturation with Respect to Carbonate Minerals	138
5	CO ₂ Phases: Gas, Liquid, Hydrate, Ice	142
6	Air-Sea CO ₂ Exchange due to Carbonate and Organic Carbon Formation	147
6	Isotopic Fractionation of Carbon: Inorganic and Biological Processes	165
1	Isotopic Species and Their Abundance	165
2	Isotopic Concentration Units and Mixing	167
3	Fractionation in Inorganic Systems	170
4	Photosynthesis and Plant Physiological Responses to CO ₂	174
5	Isotopic Fractionation and ¹³ C Cycle	184
6	Long-Term Trends	188
7	Sedimentary Rock Record and Oceanic and Atmospheric Carbon	193
1	Geologic Time Scale and Sedimentary Record	194
2	The Beginnings of Sedimentary Cycling	195
3	Broad Patterns of Sediment Lithologies	197
4	Differential Cycling of the Sedimentary Mass and Carbonates	199
5	Sedimentary Carbonate System	202
6	Evaporites and Fluid Inclusions	208
7	Isotopic Trends	211
8	Summary of the Phanerozoic Rock Record in Terms of Ocean Composition	220
8	Weathering and Consumption of CO₂	225
1	Weathering Source: Sedimentary and Crystalline Lithosphere	226
2	Dissolution at the Earth's Surface	232
3	Mineral-CO ₂ Reactions in Weathering	237
4	CO ₂ Consumption from Mineral-Precipitation Model	242
5	CO ₂ Consumption from Mineral-Dissolution Model	247
6	Environmental Acid Forcing	252
9	Carbon in the Oceanic Coastal Margin	255
1	The Global Coastal Zone	256
2	Carbon Cycle in the Coastal Ocean	262
3	Inorganic and Organic Carbon	267
4	Marine Calcifying Organisms and Ecosystems	278
5	Present and Future of the Coastal Ocean Carbon System	284

10	Natural Global Carbon Cycle through Time	289
1	The Hadean to Archean	289
2	The Archean to Proterozoic	293
3	The Phanerozoic	297
4	Pleistocene to Holocene Environmental Change	303
11	The Carbon Cycle in the Anthropocene	319
1	Characteristics of the Anthropocene	319
2	Major Perturbations of the Carbon Cycle: 1850 to the Early 21st Century	321
3	Partitioning of the Carbon, Nitrogen, and Phosphorus Fluxes	326
4	The Fundamental Carbon Problem of the Future	336
	Bibliographic References	343
	Index	383
