

Konstantin Naumenko Holm Altenbach

Modeling of Creep for Structural Analysis

With 77 Figures and 5 Tables

Contents

1	Introduction	1
1.1	Creep Phenomena in Structural Materials	1
1.1.1	Uni-Axial Creep	1
1.1.2	Multi-Axial Creep and Stress State Effects	7
1.2	Creep in Engineering Structures	11
1.3	Basic Approaches to Creep Modeling	15
2	Constitutive Models of Creep	17
2.1	General Remarks	17
2.2	Secondary Creep	22
2.2.1	Isotropic Creep	23
2.2.1.1	Classical Creep Equations	23
2.2.1.2	Creep Potentials with Three Invariants of the Stress Tensor	25
2.2.2	Creep of Initially Anisotropic Materials	28
2.2.2.1	Classical Creep Equations	30
2.2.2.2	Non-Classical Creep Equations	38
2.2.3	Functions of Stress and Temperature	44
2.3	Primary Creep and Creep Transients	48
2.3.1	Time and Strain Hardening	50
2.3.2	Kinematic Hardening	53
2.4	Tertiary Creep and Creep Damage	60
2.4.1	Scalar-Valued Damage Variables	62
2.4.1.1	Kachanov-Rabotnov Model	62
2.4.1.2	Micromechanically-Consistent Models	72
2.4.1.3	Mechanism-Based Models	75
2.4.1.4	Models Based on Dissipation	77
2.4.2	Damage-Induced Anisotropy	78

3	Examples of Constitutive Equations for Various Materials	85
3.1	Models of Isotropic Creep for Several Alloys	86
3.1.1	Type 316 Steel	86
3.1.2	Steel 13CrMo4-5	87
3.1.3	Aluminium Alloy D16AT	87
3.1.4	Aluminium Alloy BS 1472	87
3.2	Model for Anisotropic Creep in a Multi-Pass Weld Metal	92
3.2.1	Origins of Anisotropic Creep	93
3.2.2	Modeling of Secondary Creep	99
3.2.3	Identification of Material Constants	100
4	Modeling of Creep in Structures	103
4.1	General Remarks	103
4.2	Initial-Boundary Value Problems and General Solution Procedures	106
4.2.1	Governing Equations	106
4.2.2	Vector-Matrix Representation	108
4.2.3	Numerical Solution Techniques	111
4.2.3.1	Time Integration Methods	113
4.2.3.2	Solution of Boundary Value Problems	117
4.2.3.3	Variational Formulations and Procedures	118
4.3	Beams	122
4.3.1	Classical Beam Theory	122
4.3.2	Closed Form Solution	124
4.3.3	Variational Formulation and the Ritz Method	126
4.3.4	Examples	128
4.3.4.1	Solutions by the Ritz Method	128
4.3.4.2	Finite Element Solutions	132
4.3.5	Stress State Effects and Cross Section Assumptions	138
4.3.6	First Order Shear Deformation Theory	138
4.3.7	Example: Refined vs. Classical Beam Theory	144
4.4	Plates and Shells	148
4.4.1	Approaches to the Analysis of Plates and Shells	148
4.4.2	Examples	151
4.4.2.1	Edge Effects in a Moderately Thick Plate	151
4.4.2.2	Long Term Strength Analysis of a Steam Transfer Line	161

A	Basic Operations of Tensor Algebra	167
A.1	Polar and Axial Vectors	168
A.2	Operations with Vectors	169
A.2.1	Addition	169
A.2.2	Multiplication by a Scalar	169
A.2.3	Scalar (Dot) Product of Two Vectors	170
A.2.4	Vector (Cross) Product of Two Vectors	170
A.3	Bases	171
A.4	Operations with Second Rank Tensors	172
A.4.1	Addition	172
A.4.2	Multiplication by a Scalar	173
A.4.3	Inner Dot Product	173
A.4.4	Transpose of a Second Rank Tensor	173
A.4.5	Double Inner Dot Product	173
A.4.6	Dot Products of a Second Rank Tensor and a Vector	174
A.4.7	Cross Products of a Second Rank Tensor and a Vector	174
A.4.8	Trace	175
A.4.9	Symmetric Tensors	175
A.4.10	Skew-Symmetric Tensors	176
A.4.11	Vector Invariant	176
A.4.12	Linear Transformations of Vectors	176
A.4.13	Determinant and Inverse of a Second Rank Tensor	177
A.4.14	Principal Values and Directions of Symmetric Second Rank Tensors	177
A.4.15	Cayley-Hamilton Theorem	178
A.4.16	Coordinates of Second Rank Tensors	178
A.4.17	Orthogonal Tensors	179
B	Elements of Tensor Analysis	181
B.1	Coordinate Systems	181
B.2	Hamilton (Nabla) Operator	182
B.3	Integral Theorems	184
B.4	Scalar-Valued Functions of Vectors and Second Rank Tensors	185

XII Contents

C	Orthogonal Transformations and Orthogonal Invariants	187
C.1	Definitions	187
C.2	Invariants for the Full Orthogonal Group	188
C.3	Invariants for the Transverse Isotropy Group	188
C.3.1	Invariants for a Single Second Rank Symmetric Tensor	189
C.3.2	Invariants for a Set of Vectors and Second Rank Tensors ...	194
C.4	Invariants for the Orthotropic Symmetry Group	196
