Partial Differential Equations

A Unified Hilbert Space Approach

De Gruyter

Contents

Preface	vii
Nomenclature	xv
1 Elements of Hilbert Space Theory	1
1.1 Hilbert Space	1
1.2 Some Construction Principles of Hilbert Spaces	2
1.2.1 Direct Sums of Hilbert Spaces	3
1.2.2 Dual Spaces	15
1.2.3 Tensor Products of Hilbert Spaces	19
2 Sobolev Lattices	30
2.1 Sobolev Chains	30
2.2 Sobolev Lattices	56
2.3 Sobolev Lattices from Tensor Products of Sobolev Chains	65
3 Linear Partial Differential Equations with Constant Coefficients	72
3.1 Partial Differential Equations in $H_{-\infty}(\partial_\nu + e)$	72
3.1.1 First Steps Towards a Solution Theory	72
3.1.2 The Tarski–Seidenberg Theorem and some Consequences	76
3.1.3 Regularity Loss $(0, \dots, 0)$	89
3.1.4 Classification of Partial Differential Equations	90
3.1.5 The Classical Classification of Partial Differential Equations	94
3.1.6 Elliptic, Parabolic, Hyperbolic?	104
3.1.7 Evolutionary Expressions in Canonical Form	107
3.1.8 Functions of ∂_ν and Convolutions	114
3.1.9 Systems and Scalar Equations	121
3.1.10 Causality	125
3.1.11 Initial Value Problems	142
3.1.12 Some Applications to Linear Partial Differential Equations of Mathematical Physics	156
3.1.12.1 Transport Equation	156
3.1.12.2 Acoustics	160
3.1.12.3 Thermodynamics	170
3.1.12.4 Electrodynamics	171
3.1.12.5 Elastodynamics	181

	3.1.12.6	Fluid Dynamics	195
	3.1.12.7	Quantum Mechanics	198
3.2		Partial Differential Equations in $H_{-\infty}(\mathcal{D}_\nu)$	205
	3.2.1	Extension of the Solution Theory to $H_{-\infty}(\mathcal{D}_\nu)$	205
	3.2.2	Some Applications to Linear Partial Differential Equations of Mathematical Physics	223
	3.2.2.1	Helmholtz Equation in \mathbb{R}^3	223
	3.2.2.2	Helmholtz Equation in \mathbb{R}^2	226
	3.2.2.3	Cauchy–Riemann Operator	229
	3.2.2.4	Wave Equation in \mathbb{R}^2 (Method of Descent)	229
	3.2.2.5	Plane Waves	232
	3.2.2.6	Linearized Navier–Stokes Equations	233
	3.2.2.7	Electro- and Magnetostatics	235
	3.2.2.8	Force-free Magnetic Fields	236
	3.2.2.9	Beltrami Field Expansions	238
	3.2.3	Convolutions in $H_{-\infty}(\mathcal{D}_\nu)$, $\nu \in \mathbb{R}^{n+1}$	243
	3.2.4	Integral Representations of Convolutions with Fundamental Solutions	248
	3.2.4.1	An Integral Representation of the Solution of the Transport Equation	248
	3.2.4.2	Potentials, Single and Double Layers in \mathbb{R}^3	249
	3.2.4.3	Electro- and Magnetostatics (Biot–Savart’s Law)	275
	3.2.4.4	Potential Theory in \mathbb{R}^2	278
	3.2.4.5	Cauchy’s Integral Formula	281
	3.2.4.6	Integral Representations of Solutions of the Helmholtz Equation in \mathbb{R}^3	285
	3.2.4.7	Retarded Potentials	296
	3.2.4.8	Integral Representations of Solutions of the Time- Harmonic Maxwell Equations	297
4		Linear Evolution Equations	303
	4.1	Linear Operator Equations in Sobolev Lattices	303
	4.1.1	Polynomials of Commuting Operators	303
	4.1.2	Polynomials of Commuting, Selfadjoint Operators	304
	4.2	Evolution Equations with Polynomials of Operators as Coefficients	305
	4.2.1	Classification of Operator Polynomials with Time Differenti- ation	305
	4.2.2	Causality of Evolutionary Problems	308
	4.2.3	Abstract Initial Value Problems	316
	4.2.4	Systems and Scalar Equations	329
	4.2.5	First-Order-in-Time Evolution Equations in Sobolev Lattices	334

5	Some Evolution Equations of Mathematical Physics	338
5.1	Schrödinger Type Equations	338
5.1.1	The Selfadjoint Laplace Operator	338
5.1.2	Some Perturbations	342
5.1.2.1	Bounded Perturbations	342
5.1.2.2	Relatively Bounded Perturbations (the Coulomb Potential)	346
5.2	Heat Equation	349
5.2.1	The Selfadjoint Operator Case	350
5.2.1.1	Prescribed Dirichlet and Neumann Boundary Data	357
5.2.1.2	Transmission Initial Boundary Value Problem	366
5.2.2	Stefan Boundary Condition	369
5.2.3	Lower Order Perturbations	371
5.3	Acoustics	372
5.3.1	Dirichlet and Neumann Boundary Condition	374
5.3.2	Wave Equation	377
5.3.3	Reversible Heat Transport	382
5.4	Electrodynamics	385
5.4.1	The Electric Boundary Condition	387
5.4.2	Some Decomposition Results	391
5.4.3	The Extended Maxwell System	394
5.4.4	The Vectorial Wave Equation for the Electromagnetic Field	400
5.5	Elastodynamics	407
5.5.1	The Rigid Boundary Condition	409
5.5.2	Free Boundary Condition	412
5.5.3	Shear and Pressure Waves	413
5.6	Plate Dynamics	415
5.7	Thermo-Elasticity	420
6	A “Royal Road” to Initial Boundary Value Problems	426
6.1	A Class of Evolutionary Material Laws	427
6.2	Evolutionary Dynamics and Material Laws	431
6.2.1	The Shape of Evolutionary Problems with Material Laws	431
6.2.2	Some Special Cases	437
6.2.3	Material Laws via Differential Equations	440
6.2.4	Coupled Systems	441
6.2.5	Initial Value Problems	443
6.2.6	Memory Problems	447
6.3	Some Applications	453
6.3.1	Reversible Heat Transfer	454
6.3.2	Models of Thermoelasticity	455
6.3.3	Thermo-Piezo-Electro-Magnetism	457

Conclusion	459
Bibliography	461
Index	465
