<b>1</b>	<b>Changes in the Chemical Composition of the Atmosphere and Potential Impacts</b>	<b>1</b>
1.1	Introduction	1
1.1.1	Atmospheric Chemistry and Life on Earth	1
1.1.2	Environmental Issues and Atmospheric Chemistry	3
1.1.3	The Atmosphere in the Earth System	5
1.2	Global Atmospheric Chemistry and the IGAC Project	8
1.3	Past Changes in Atmospheric Chemical Composition	10
1.3.1	Long-Term Variability: Evidence of Feedbacks	10
1.3.2	Changing Atmospheric Composition During the Last Few Centuries	11
1.3.3	Future Changes in Atmospheric Composition	12
1.4	Causes of Atmospheric Changes	13
1.4.1	Fossil Fuel Combustion and Industry	13
1.4.2	Biomass Burning	13
1.4.3	Land-Use Changes	15
1.4.4	Climate Changes	15
1.5	Impacts of Changes in Atmospheric Composition	15
1.5.1	Climate Change	15
1.5.2	Impacts on Ecosystems	16
1.5.3	Corrosion	16
1.5.4	Health Effects	16
1.6	Some Important Questions	17
<b>2</b>	<b>Biosphere-Atmosphere Interactions</b>	<b>19</b>
2.1	Introduction	19
2.2	Key Biogenic Gases or Families and their Relevance to Atmospheric Chemistry	20
2.2.1	The Carbon Family of Gases: CH <sub>4</sub> , Volatile Organic Carbon Compounds (VOCs), and Carbon Monoxide (CO)	20
2.2.2	The Nitrogen Family of Gases: Ammonia (NH <sub>3</sub> ), N <sub>2</sub> O, and NO	22
2.2.3	The Sulphur Family: Dimethylsulphide and Carbonyl Sulphide	24
2.3	A Paleoclimatic Perspective on CH <sub>4</sub> and DMS	25
2.4	Atmospheric Compounds as Nutrients or Toxins	27
2.5	Approaches for Studying Exchange	27
2.6	Terrestrial Highlights	28
2.6.1	Exchange of Trace Gases and Aerosols from Terrestrial Ecosystems	28
2.7	Background: Emissions and Deposition	29
2.7.1	Production and Consumption of CH <sub>4</sub>	30
2.7.2	Biomass Burning	43
2.7.3	Wet Deposition in the Tropics	52
2.8	Marine Highlights	54
2.8.1	Air-Water Gas Exchange Parameterisation	55
2.8.2	Marine Biogenic Emissions: A Few Examples	57
2.8.3	Biological and Chemical Impacts of Atmospheric Deposition on Marine and Estuarine Systems	64
2.9	Summary of Achievements and Remaining Research Challenges	70

---

<b>3</b>	<b>Atmospheric Photooxidants</b>	73
3.1	Introduction	73
3.1.1	Background	73
3.1.2	Chapter Structure	75
3.2	Ozone Precursors	75
3.2.1	Introduction	75
3.2.2	Primary Emissions of Ozone Precursors	75
3.2.3	Global Distribution of Ozone Precursors	77
3.3	Photochemistry in the Troposphere	86
3.3.1	Background	86
3.3.2	IGAC Activities Related to Testing the Theory of HO <sub>x</sub> Photochemistry	89
3.3.3	Measurements of Total Peroxy Radicals (HO <sub>2</sub> + RO <sub>2</sub> )	91
3.3.4	Measurements of Ozone and Peroxide Climatologies in Clean Air	92
3.3.5	Reactive Nitrogen Chemistry	93
3.3.6	The Role of Tropospheric Chemistry in the Production of Particulate Matter in the Troposphere	94
3.3.7	Modelling of Radical Chemistry and Ozone Production and Loss	95
3.3.8	Progress in Modelling the Global Budget of OH	96
3.3.9	Night Time Free Radical Chemistry – NO <sub>3</sub>	98
3.3.10	Halogen Chemistry in the Troposphere	99
3.4	Transport and Mixing Processes	101
3.4.1	Boundary Layer Mixing and Exchange	102
3.4.2	Convection	103
3.4.3	Synoptic Scale Transport	104
3.4.4	Stratosphere-Troposphere Exchange	106
3.5	A Climatology of Tropospheric Ozone	107
3.5.1	Factors Controlling the Global Distribution of Ozone	107
3.5.2	Global Measurements of Ozone and Sonde Data	109
3.6	Long-Range Transport of Pollution and Impact on the Ozone Budget	116
3.6.1	Introduction	116
3.6.2	Continental Pollution	117
3.6.3	North Atlantic Ocean Field Campaigns	118
3.6.4	Pacific Ocean Field Campaigns	120
3.6.5	Studies of Aircraft Emissions	122
3.7	Summary of Principal Achievements and Remaining Uncertainties	122
3.7.1	Achievements	122
3.7.2	Uncertainties	124
<b>4</b>	<b>Tropospheric Aerosols</b>	125
4.1	Introduction	125
4.2	Integrated View of the Present State of Knowledge of Atmospheric Aerosols	127
4.2.1	Space-Borne Measurements	127
4.2.2	In situ Measurements	131
4.2.3	Process Understanding	135
4.2.4	Large-Scale Aerosol Models	137
4.3	Selected Recent Developments	138
4.3.1	Primary Emissions	138
4.3.2	Emissions of Particle Precursors	139
4.3.3	Formation, Evolution, and Removal of Condensed Material	142
4.3.4	Effects of the Aerosol on Radiation in the Atmosphere	147
4.3.5	Effects of Aerosols on Atmospheric Photochemistry	150
4.3.6	Aerosols and Health	151
4.4	Research Approaches	151
4.4.1	In situ Observations with Intensive Campaigns	151

---

4.4.2	In situ Observations Using Long-Term Monitoring Networks	152
4.4.3	Remote Sensing of Aerosols	152
4.4.4	Aerosol Modelling	152
4.5	Highlights and Remaining Challenges	153
4.5.1	Characterisation of the Atmospheric Aerosol	154
4.5.2	Formation and Growth of Particulate Matter	154
4.5.3	Aerosol-Cloud Interactions	155
4.5.4	Modelling Challenges	155
<b>5</b>	<b>Advances in Laboratory and Field Measurements</b>	<b>157</b>
5.1	Introduction	157
5.2	Laboratory Studies	157
5.2.1	Recent Advances	157
5.2.2	Future Needs	159
5.2.3	Summary	160
5.3	Field measurements: Gas Phase	161
5.3.1	Recent Advances	161
5.3.2	Techniques for the Measurement of Isotopes	163
5.3.3	Use of Lidar on Airborne Chemistry Missions	164
5.3.4	Flux Measurements	164
5.3.5	Instrument Intercomparisons	165
5.3.6	Future Needs	166
5.4	Field measurements: Aerosols	166
5.4.1	Chemical Analysis of Aerosol Samples	166
5.4.2	Particle Number Concentration	169
5.4.3	Number Size Distribution	169
5.4.4	Optical Properties	169
5.4.5	Hygroscopicity	170
5.4.6	Aerosol Deposition Fluxes	170
5.4.7	Issues in Aerosol Sampling	171
5.4.8	Summary of Future Needs	172
5.5	Satellite Instruments for Tropospheric Chemistry	172
5.5.1	Introduction	172
5.5.2	Recent Advances	173
5.5.3	Future Trends	176
5.5.4	Summary	178
5.6	Long-Term Measurements	179
5.6.1	Introduction	179
5.6.2	Global Networks	179
5.6.3	Summary and Future Trends	183
5.7	Summary and Conclusions	183
<b>6</b>	<b>Modelling</b>	<b>185</b>
6.1	Introduction	185
6.2	Types of Models	185
6.3	Model Components	186
6.3.1	Treatment of Large-Scale Transport	187
6.3.2	Representation of Chemical Processes	189
6.3.3	Input to Chemistry-Transport Models	193
6.4	Model Evaluation	197
6.4.1	Comparisons with Observations	197
6.4.2	Model Intercomparisons	198
6.5	Model Applications	200
6.5.1	Evolution of the Composition of the Troposphere	200
6.5.2	Use of Photochemical Models for Supporting Field Campaigns	201
6.5.3	Climate Assessments	201

---

6.6	Current Developments and Future Challenges .....	201
6.6.1	Further Development of Current CTMs .....	201
6.6.2	Chemical Data Assimilation .....	202
6.6.3	Inverse Modelling .....	203
6.6.4	Dynamic Aerosol Modelling .....	203
6.6.5	Nesting-Variable Resolution .....	204
6.6.6	Cloud-Resolving Chemical Models .....	205
6.6.7	Coupled Earth System Models .....	206
<b>7</b>	<b>An Integrated View of the Causes and Impacts of Atmospheric Changes</b> .....	<b>207</b>
7.1	Introduction .....	207
7.2	What Determines the Chemical Composition of the Atmosphere? .....	207
7.3	How Have Human Activities Altered Atmospheric Composition? .....	208
7.4	How Have Human Activities Changed the Global Atmospheric Budgets of Carbon, Nitrogen, and Sulphur? .....	212
7.5	What Controls Tropospheric Ozone? .....	215
7.6	Is the “Cleansing Efficiency” of the Atmosphere Changing? .....	216
7.7	How Does Atmospheric Chemistry Affect the Biosphere and Food Production? .....	217
7.7.1	Impact on Terrestrial and Marine Ecosystems .....	218
7.7.2	Direct Effects .....	218
7.7.3	Earth System Feedbacks .....	219
7.7.4	Impacts on Agricultural Production Systems .....	220
7.8	How Does Atmospheric Chemistry Affect Human Health? .....	220
7.9	What is the Connection between Atmospheric Composition and Climate? ...	220
7.10	How Might Chemical Composition Evolve in the Future? .....	225
7.11	Are There Risks of Abrupt Changes and/or Irreversible Changes in Atmospheric Composition? .....	227
7.12	What Should the Research Strategy Be to Address Unresolved Questions? ..	229
