

SECOND EDITION

**PRINCIPLES OF
SEDIMENTOLOGY AND
STRATIGRAPHY**

Sam Boggs, Jr.
University of Oregon

Prentice Hall
Upper Saddle River, New Jersey 07458

Contents

PART 1 INTRODUCTION **1**

1 Development and Application of Sedimentology and Stratigraphy **3**

- 1.1 Historical Development of Sedimentology and Stratigraphy as Sciences** 3
Introduction 3 / Organization of Sedimentary Rocks into Stratigraphic Successions 4 / The Geologic Cycle and Uniformitarianism 5 / Birth of Biostratigraphy and Stratigraphic Correlation 6 / Development of Petrographic Microscopy 6 / Sedimentologic and Stratigraphic Syntheses 7 / The Geologic Revolution—Seafloor Spreading and Global Plate Tectonics 7
- 1.2 New Concepts and New Analytical Tools for Studying Sedimentary Rocks** 10
- 1.3 Applications of Sedimentologic and Stratigraphic Study** 11
Paleogeography and Environmental Analysis 11 /
Paleoclimatology 11 / Applications in Industry 12
- Further Readings 14

PART 2 WEATHERING PROCESSES AND PRODUCTS AND SEDIMENT TRANSPORT 15

2 Weathering and Soils 17

- 2.1 Introduction 17
- 2.2 Subaerial Weathering Processes 18
Physical Weathering 18 / Chemical Weathering 18 / Products of Subaerial Weathering 23
- 2.3 Submarine Weathering Processes and Products 24
- 2.4 Soils 26
Soil-forming Processes 26 / Soil Profiles and Soil Classification 27 / Paleosols 29 / Recognition of Paleosols 30
- Further Readings 32

3 Transport and Deposition of Siliciclastic Sediment 33

- 3.1 Introduction 33
- 3.2 Fundamentals of Fluid Flow 34
Types of Fluids 36 / Laminar vs. Turbulent Flow 36 / Reynolds Number 38 / Velocity Profiles and Bed Roughness 39 / Boundary Shear Stress 39 / Froude Number 40
- 3.3 Particle Transport by Fluids 40
Particle Entrainment 41 / Role of Settling Velocity in Grain Transport 45 / Relationship of Unidirectional Current Flow to Bedforms 46 / Wind Transport and Bedform Development 53 / Entrainment and Transport by Waves 56 / Sediment Loads and Transport Paths 60 / Deposits of Fluid Flow 64
- 3.4 Particle Transport by Sediment Gravity Flows 65
Turbidity Currents 68 / Liquefied Flows 72 / Grain Flows 74 / Debris Flows and Mud Flows 75
- Further Readings 75

PART 3 PHYSICAL PROPERTIES OF SEDIMENTARY ROCKS 77

4 Sedimentary Textures 79

- 4.1 Introduction 79
- 4.2 Grain Size 79
Grain-Size Scales 80 / Measuring Grain Size 80 / Graphical and Mathematical Treatment of Grain-Size Data 84 / Application and Importance of Grain-Size Data 91

- 4.3 Particle Shape** 94
 Particle Form 94 / Roundness 98 / Surface Texture 100 / Fourier
 Shape Analysis 102
- 4.4 Fabric** 103
 Grain Orientation 104 / Grain Packing, Grain-to-Grain Relations, and
 Porosity 106
- Further Readings 107

5 Sedimentary Structures **108**

- 5.1 Introduction** 108
- 5.2 Classification of Primary Sedimentary Structures** 109
- 5.3 Stratification and Bedforms** 109
 Bedding and Lamination 109 / Graded Bedding 115 / Massive
 Structureless Bedding 117 / Ripples and Cross-Bedding 118 / Ripple
 Cross-Lamination 122 / Flaser and Lenticular Bedding 124 /
 Hummocky Cross-Stratification 125 / Irregular Stratification 127 /
 Erosion Structures 131
- 5.4 Bedding-Plane Markings** 132
 Markings Generated by Erosion and Deposition 132 / Markings
 Generated by Deformation: Load Casts 135 / Biogenic Structures 137 /
 Bedding-Plane Markings of Miscellaneous Origin 146
- 5.5 Other Structures** 150
 Sandstone Dikes and Sills 150 / Structures of Secondary Origin 150
- 5.6 Paleocurrent Analysis from Sedimentary Structures** 151
- Further Readings 154

PART 4 COMPOSITION, CLASSIFICATION, ORIGIN, AND DIAGENESIS OF SEDIMENTARY ROCKS **155**

6 Siliciclastic Sedimentary Rocks **157**

- 6.1 Introduction** 157
- 6.2 Sandstones** 157
 Mineralogy 158 / Mineral Cements 162 / Chemical
 Composition 163 / Classification of Sandstones 166 / General
 Characteristics of Major Classes of Sandstones 168
- 6.3 Conglomerates** 173
 Particle Composition 173 / Classification 174 / Origin and
 Occurrence of Conglomerates 175
- 6.4 Shales** 177
 Composition 178 / Classification 181 / Origin and Occurrence of
 Shales 181

- 6.5** Provenance Significance of Mineral Composition 183
- 6.6** Diagenesis 185
 Stages and Realms of Diagenesis 187 / Major Diagenetic Processes and Effects 188
- Further Readings 193

7 Carbonate Sedimentary Rocks 194

- 7.1** Introduction 194
- 7.2** Chemistry 195
- 7.3** Mineralogy 195
- 7.4** Limestone Textures 197
 Carbonate Grains 197 / Microcrystalline Calcite 203 / Sparry Calcite 204
- 7.5** Dolomite Textures 204
- 7.6** Classification of Carbonate Rocks 206
- 7.7** Origin of Carbonate Rocks 210
 Limestones 213 / Dolomites 221
- 7.8** Diagenesis 227
 Regimes of Carbonate Diagenesis 227 / Major Diagenetic Processes and Changes 229 / Summary Results of Carbonate Diagenesis 234
- Further Readings 235

8 Other Chemical/Biochemical and Carbonaceous Sedimentary Rocks 236

- 8.1** Introduction 236
- 8.2** Evaporites 237
 Composition 237 / Classification 238 / Origin of Evaporite Deposits 242 / Diagenesis of Evaporites 245
- 8.3** Siliceous Sedimentary Rocks (Cherts) 245
 Mineralogy and Texture 246 / Chemical Composition 246 / Classification and Occurrence 247 / Origin of Cherts 250 / Precambrian Cherts 254 / Diagenesis of Chert 254
- 8.4** Iron-bearing Sedimentary Rocks 256
 Kinds of Iron-rich Sedimentary Rocks 256 / Iron-Formations 257 / Ironstones 259 / Iron-rich Shales 261 / Miscellaneous Iron-rich Sediments 261 / Origin of Iron-rich Sedimentary Rocks 263
- 8.5** Sedimentary Phosphorites 266
 Composition 267 / Principal Kinds of Phosphate Deposits 268 / Origin of Phosphorites 271 / Summary of Phosphorite Deposition 273

- 8.6 Carbonaceous Sedimentary Rocks 275**
 Introduction 275 / Kinds of Organic Matter in Sedimentary
 Rocks 275 / Classification of Carbonaceous Sedimentary Rocks 276 /
 Coals 276 / Oil Shale (Kerogen Shale) 279 / Petroleum and Solid
 Bitumins 282
 Further Readings 285

PART 5 SEDIMENTARY ENVIRONMENTS 287

9 Principles of Environmental Interpretation and Classification 289

- 9.1 Concept of Environment 289**
9.2 Sedimentary Processes and Products 290
 Sedimentary Process and Response 290 / Facies Associations 290
9.3 Basic Tools of Environmental Analysis 293
9.4 Classification of Depositional Environments 294
9.5 Facies Models 295
 Definition of Models 296 / Types of Facies Models 297 /
 Construction and Use of Models 297
 Further Readings 298

10 Continental Environments 299

- 10.1 Introduction 299**
10.2 Fluvial Systems 300
 Alluvial Fans 300 / River Systems 306 / Recognizing Ancient Fluvial
 Deposits 318
10.3 Eolian Desert Systems 318
 Introduction 318 / Depositional Processes 319 / Deposits of Modern
 Deserts 320 / Ancient Desert Deposits 324
10.4 Lacustrine Systems 328
 Origin and Size of Lakes 329 / Sedimentation Processes in
 Lakes 330 / Characteristics of Lacustrine Deposits 333 / Recognition
 of Ancient Lake Deposits 336 / Examples of Ancient Lake
 Deposits 337
10.5 Glacial Systems 340
 Introduction 340 / Environmental Setting 342 / Transport and
 Deposition in Glacial Environments 342 / Glacial Facies 345 /
 Continental Ice Facies 346 / Marine Glacial Facies 349 / Vertical
 Facies Successions 350 / Ancient Glacial Deposits 352
 Further Readings 353

11	Marginal-Marine Environments	355
11.1	Introduction	355
11.2	Deltaic Systems	356
	Introduction	356 / Delta Classification and Sedimentation Processes 357 / Physiographic and Sediment Characteristics of Deltaic Systems 368 / Constructional vs. Destructional Phases of Delta Development 371 / Recognition of Ancient Deltaic Deposits 373 / Ancient Deltaic Systems 374
11.3	Beach and Barrier Island Systems	377
	Introduction	377 / Depositional Setting 379 / Depositional Processes on Beaches 381 / Characteristics of Beach and Barrier-Island Deposits in Modern Environments 384 / Transgressive and Regressive Beach and Barrier-Island Deposits in the Geologic Record 389
11.4	Estuarine and Lagoonal Systems	395
	Introduction	395 / Physiography of Estuaries and Lagoons 396 / Hydrologic and Sediment Characteristics 397 / Ancient Estuarine and Lagoonal Deposits 404
11.5	Tidal-Flat Systems	407
	Introduction	407 / Depositional Setting 408 / Sedimentation Processes 409 / Characteristics of Tidal-Flat Sediments 410 / Ancient Tidal-Flat Sediments 414
	Further Readings	416
12	Siliciclastic Marine Environments	418
12.1	Introduction	418
12.2	The Neritic (Shelf) Environment	419
	Physiography and Depositional Setting	420 / Depositional Processes 421 / Shelf Sediments 426 / Ancient Siliciclastic Shelf Sediments 433
12.3	The Oceanic (Deep-Water) Environment	438
	Depositional Setting	439 / Transport and Depositional Processes to and within Deep Water 443 / Principal Kinds of Modern Deep-Sea Sediments 447 / Ancient Deep-Sea Sediments 455
	Further Readings	459
13	Carbonate Marine Environments	461
13.1	Introduction	461
13.2	Carbonate Shelf (Nonreef) Environments	463
	Depositional Setting	463 / Sedimentation Processes 467 / Sediment Characteristics 468 / Modern Shallow Platform Environments 470 / Examples of Modern Carbonate Platforms 472 / Ancient Carbonate Shelf Successions 473

- 13.3 Organic Reef Environments 476
 Modern Reefs and Reef Environments 477 / Ancient Reefs 482
- 13.4 Slope/Basin Carbonates 484
- 13.5 Mixed Carbonate-Siliciclastic Systems 487
- Further Readings 488

PART 6 PRINCIPLES OF STRATIGRAPHY AND BASIN ANALYSIS 489

14 Lithostratigraphy 491

- 14.1 Introduction 491
- 14.2 Types of Lithostratigraphic Units 491
- 14.3 Stratigraphic Contacts 493
 Contacts between Conformable Strata 493 / Unconformable
 Contacts 494 / Contacts between Laterally Adjacent Lithosomes 496
- 14.4 Vertical and Lateral Successions of Strata 497
 Nature of Vertical Successions 497 / Cyclic Successions 497 /
 Sedimentary Facies 499 / Walther's Law of Succession of Facies 501 /
 Effects of Climate and Sea Level on Sedimentation Patterns 505
- 14.5 Nomenclature and Classification of Lithostratigraphic Units 507
 Development of the Stratigraphic Code 507 / Major Types of
 Stratigraphic Units 508 / Formal Lithostratigraphic Units 510
- 14.6 Depositional Sequences and Sequence Stratigraphy 511
 Definition 511 / Time Significance of Sequences 512 / Internal
 Relationships 512 / Identification of Depositional Sequences 514 /
 Stratigraphic Rank of Sequences 514 / Sequence Stratigraphy 515
- 14.7 Correlation of Lithostratigraphic Units 519
 Introduction 519 / Definition of Correlation 520 /
 Lithocorrelation 522
- Further Readings 530

15 Seismic Stratigraphy 531

- 15.1 Introduction 531
- 15.2 Early Development of Seismic Methods 532
- 15.3 Principles of Reflection Seismic Methods 532
 On-Land Surveying 532 / Marine Seismic Surveying 534
- 15.4 Application of Reflection Seismic Methods to Stratigraphic Analysis 537
 Parameters Used in Seismic Stratigraphic Interpretation 538 /
 Procedures in Seismic Stratigraphic Analysis 546 / Sea-Level
 Analysis 552 / Orders of Stratigraphic Cycles 555 / The Reliability of
 Sea-Level Analysis from Seismic Data 558

- 15.5 Correlation by Seismic Events 561
 15.6 Nomenclature and Classification of Seismic Stratigraphic Units 562
 Further Readings 563

16 Magnetostratigraphy 564

- 16.1 Introduction 564
 16.2 Sampling, Measuring, and Displaying Remanent Magnetism 567
 16.3 Development of the Magnetic Polarity Time Scale 568
 16.4 Nomenclature and Classification of Magnetostratigraphic Units 577
 16.5 Applications of Magnetostratigraphy and Paleomagnetism 580
 Correlation 580 / Geochronology 581 / Paleoclimatology 584 /
 Other Applications of Paleomagnetism 585
 Further Readings 586

17 Biostratigraphy 587

- 17.1 Introduction 587
 17.2 Fossils as a Basis for Stratigraphic Subdivision 589
 Principle of Faunal Succession 589 / Concept of Stage 590 /
 Concept of Zone 590
 17.3 Biostratigraphic Units 592
 Principal Categories of Zones 592 / Rank of Biostratigraphic
 Units 595 / Naming Biostratigraphic Units 595
 17.4 The Basis of Biostratigraphic Zonation: Changes in Organisms through
 Time 596
 Evolution 596 / Taxonomic Classification and Importance of
 Species 597 / Changes in Species through Time 598
 17.5 Distribution of Organisms in Space: Paleobiogeography 604
 Dispersal of Organisms 605 / Barriers to Dispersal 607
 17.6 Combined Effects of the Distribution of Organisms in Time and
 Space 613
 17.7 Biocorrelation 613
 Correlation by Assemblage Zones 614 / Correlation by Abundance
 Zones 615 / Chronocorrelation by Fossils 616 / Correlation by
 Biologic Interval Zones 617 / Correlation by Biogeographic Acme
 Zones 623
 Further Readings 625

18 Chronostratigraphy and Geologic Time 626

- 18.1 Introduction 626
 18.2 Geologic Time Units 626

- 18.3** The Geologic Time Scale 630
 Purpose and Scope 630 / Development of the Geologic Time Scale 630
- 18.4** Calibrating the Geologic Time Scale 638
 Calibrating the Geologic Time Scale by Fossils: Biochronology 639 /
 Calibrating by Absolute Ages: Radiochronology 641
- 18.5** Chronocorrelation 650
 Event Correlation and Stratigraphy 650 / Correlation by Stable Isotope Events 654 / Problems with Isotopic Chronocorrelation 665 /
 Correlation by Absolute Ages 665
- Further Readings 666

19 Basin Analysis, Tectonics, and Sedimentation 667

- 19.1** Introduction 667
- 19.2** Basin Classification and Origin 668
 Interior Basins, Intracontinental Rifts, and Aulacogens 668 / Passive (Rifted) Continental Margins 672 / Oceanic Basins and Rises 673 / Subduction-related Settings 674 / Strike-Slip/Transform-Fault-related Settings 675 / Collision-related Settings 675
- 19.3** Sedimentary Basin Fill 678
- 19.4** Techniques of Basin Analysis 678
 Preparation of Stratigraphic Maps and Cross Sections 679 / Paleocurrent Analysis and Paleocurrent Maps 683 / Siliciclastic Petrofacies (Provenance) Studies 684 / Geophysical Studies 685
- 19.5** Applications of Basin Analysis 686
 Interpreting Geologic History 686 / Economic Applications 688
- 19.6** Relationship of Tectonics and Sedimentation 690
- Further Readings 691

APPENDIX A: Principal Methods for Estimating Diagenetic Paleotemperatures 692

APPENDIX B: North American Stratigraphic Code 695
