

# The Cauchy Problem for Solutions of Elliptic Equations

Nikolai N. Tarkhanov

Akademie Verlag

# Contents

<b>Introduction</b>	<b>17</b>
<b>List of main notations</b>	<b>27</b>
<b>1 Function spaces</b>	<b>29</b>
1.1 An abstract theory	29
1.1.1 Semilocal spaces	29
1.1.2 Functions of positive smoothness	31
1.1.3 Function spaces on closed sets	32
1.1.4 Dual spaces	34
1.1.5 Functions of negative smoothness	36
1.2 Spaces of smooth functions	38
1.2.1 Spaces of continuous functions	38
1.2.2 Spaces of functions of finite smoothness	39
1.2.3 The space of infinitely differentiable functions	39
1.2.4 Standard regularization	40
1.2.5 Approximation by $C^\infty$ functions	41
1.2.6 Spectral synthesis in spaces of smooth functions	43
1.2.7 Smooth functions on closed sets	44
1.2.8 Dual spaces	45
1.2.9 Functions of negative smoothness	46
1.3 Hölder spaces	47
1.3.1 Spaces of Hölder functions	47
1.3.2 Hölder functions of finite smoothness	48
1.3.3 Hölder continuous functions	50
1.3.4 Standard regularization of Hölder functions	51
1.3.5 Approximation by $C^\infty$ functions	53
1.3.6 Spectral synthesis in spaces of Hölder functions	54
1.3.7 Hölder functions on closed sets	56
1.3.8 Dual spaces	58
1.3.9 The negative Hölder spaces	58
1.4 Sobolev spaces	60
1.4.1 Lebesgue spaces	60
1.4.2 The spaces $W_{opt}^{s,q}(X)$	60

1.4.3	Standard regularization of Sobolev functions . . . . .	61
1.4.4	Approximation by $C^\infty$ functions . . . . .	62
1.4.5	Geometrical properties of domains . . . . .	63
1.4.6	Embedding theorems . . . . .	65
1.4.7	Spectral synthesis in Sobolev spaces . . . . .	66
1.4.8	Sobolev functions on closed sets . . . . .	68
1.4.9	The negative Sobolev spaces . . . . .	69
1.4.10	Duality . . . . .	70
1.4.11	Fractional order Sobolev spaces . . . . .	72
1.4.12	Besov spaces . . . . .	74
1.4.13	Traces of Sobolev functions . . . . .	75
<b>2</b>	<b>Pseudodifferential operators in the spaces of distributions on closed sets</b>	<b>78</b>
2.1	Calderon-Zygmund operators . . . . .	78
2.1.1	The Kernel Theorem of L. Schwartz . . . . .	78
2.1.2	Calderon-Zygmund kernels . . . . .	80
2.1.3	Singular integrals . . . . .	81
2.1.4	Extension to $L^q(\mathbb{R}^n)$ . . . . .	82
2.1.5	Maximal operator . . . . .	83
2.1.6	Classical examples . . . . .	84
2.1.7	Calderon-Zygmund operators . . . . .	85
2.1.8	The maximal function . . . . .	86
2.1.9	Bounded mean oscillation . . . . .	87
2.1.10	The Calderon-Zygmund theory . . . . .	88
2.2	Pseudodifferential operators . . . . .	89
2.2.1	The Fourier integral representation of Calderon-Zygmund operators . . . . .	89
2.2.2	The definition . . . . .	90
2.2.3	Symbols . . . . .	92
2.2.4	Schwartz kernels of pseudodifferential operators . . . . .	93
2.2.5	$C^*$ -algebra of pseudodifferential operators . . . . .	95
2.2.6	Pseudohomogeneous kernels . . . . .	97
2.2.7	Seeley's theorem . . . . .	100
2.2.8	Operators on manifolds . . . . .	103
2.2.9	Elliptic operators and parametrices . . . . .	104
2.2.10	Symbols with limited smoothness . . . . .	106
2.3	Boundedness theorems for pseudodifferential operators in local spaces . . . . .	107
2.3.1	Fundamental theorem of calculus . . . . .	107
2.3.2	Behavior in local Hölder spaces . . . . .	109
2.3.3	Behavior in local Zygmund spaces . . . . .	110
2.3.4	Behavior in local spaces of Hölder continuous functions . . . . .	110
2.3.5	Behavior in local Sobolev spaces . . . . .	111

2.3.6	Behavior in local Besov spaces . . . . .	112
2.3.7	Behavior in local BMO spaces . . . . .	112
2.3.8	Potential spaces . . . . .	113
2.4	Boundedness theorems for pseudodifferential operators in non-local spaces . . . . .	115
2.4.1	Surface layer potentials . . . . .	115
2.4.2	Surface values of layer potentials . . . . .	116
2.4.3	Symbols with the transmission property . . . . .	117
2.4.4	Operators with the transmission property . . . . .	119
2.4.5	Pseudodifferential operators on manifolds with boundary . . . . .	120
2.4.6	Potential operators . . . . .	121
2.4.7	Continuity in Hölder spaces . . . . .	122
2.4.8	Continuity in Sobolev spaces . . . . .	123
<b>3</b>	<b>Capacity</b>	<b>124</b>
3.1	Generalized form of capacity associated with a seminormed space . . . . .	124
3.1.1	More on the traces of distributions . . . . .	124
3.1.2	Removable singularities . . . . .	126
3.1.3	Solutions regular at infinity . . . . .	128
3.1.4	The equivalence of two forms of capacity . . . . .	129
3.1.5	Capacitary extremals . . . . .	131
3.1.6	Approximation on nowhere dense compact sets . . . . .	132
3.1.7	The unified capacity . . . . .	133
3.2	Capacity in spaces of smooth functions . . . . .	136
3.2.1	Fundamental solutions of homogeneous elliptic equations . . . . .	136
3.2.2	Orthogonal decomposition in the space of polynomials . . . . .	138
3.2.3	A Laurent expansion at infinity . . . . .	139
3.2.4	Higher order capacities . . . . .	143
3.2.5	Examples . . . . .	145
3.2.6	Other expressions for the capacity . . . . .	148
3.2.7	Behavior under affine transformations . . . . .	149
3.2.8	The capacity of a point . . . . .	151
3.2.9	More on outer capacity . . . . .	152
3.2.10	Comparison with Hausdorff measure . . . . .	153
3.3	Capacity in Hölder spaces . . . . .	153
3.3.1	A definition . . . . .	153
3.3.2	Behavior under affine transformations . . . . .	154
3.3.3	A nondegeneracy property . . . . .	154
3.3.4	A further look at outer capacity . . . . .	155
3.3.5	Hausdorff measure . . . . .	155
3.3.6	Commensurability with Hausdorff content . . . . .	156
3.3.7	Semiadditivity of the capacity . . . . .	159
3.4	Capacity in Sobolev spaces . . . . .	160

---

3.4.1	Bessel capacity . . . . .	160
3.4.2	Metric properties of Bessel capacity . . . . .	163
3.4.3	Quasicontinuous representatives of Sobolev functions . . . . .	163
3.4.4	An application to spectral synthesis in Sobolev spaces . . . . .	165
3.4.5	A brief review of higher order capacities . . . . .	165
3.4.6	Comparison with Bessel capacity . . . . .	166
3.4.7	Nguyen's theorem . . . . .	168
<b>4</b>	<b>Systems of differential equations with injective (surjective) symbols</b>	<b>172</b>
4.1	Elliptic complexes . . . . .	172
4.1.1	(Over-) underdetermined systems . . . . .	172
4.1.2	Complexes of differential operators . . . . .	173
4.1.3	Resolutions of overdetermined systems . . . . .	175
4.1.4	Laplacians . . . . .	176
4.1.5	Parametrices of elliptic complexes . . . . .	179
4.2	A solvability criterion for a system with surjective symbol in terms of convexity of supports . . . . .	180
4.2.1	$P$ -convex sets . . . . .	181
4.2.2	Statement of the theorem . . . . .	181
4.2.3	Proof of the necessity . . . . .	182
4.2.4	Proof of the sufficiency . . . . .	183
4.2.5	Solvability in the space of distributions . . . . .	184
4.3	Uniqueness condition for the Cauchy problem in the small . . . . .	184
4.3.1	The sheaf of solutions . . . . .	184
4.3.2	The uniqueness condition . . . . .	185
4.3.3	Topological conditions for solvability . . . . .	186
4.4	Left (right) fundamental solutions for a system with injective (surjective) symbol . . . . .	187
4.4.1	Fundamental solutions to differential complexes . . . . .	187
4.4.2	An existence theorem . . . . .	188
4.4.3	Some examples . . . . .	189
<b>5</b>	<b>Coarse results on approximation on compact sets by solutions of a system with surjective symbol</b>	<b>190</b>
5.1	Runge theorem for solutions of a system with surjective symbol . . . . .	190
5.1.1	Problem of approximation . . . . .	191
5.1.2	Some examples . . . . .	192
5.1.3	A brief survey . . . . .	193
5.1.4	The annihilator of $sol(K)$ . . . . .	194
5.1.5	$P$ -convex hull . . . . .	194
5.1.6	Runge theorem . . . . .	196
5.2	Approximation of finitely smooth solutions by infinitely differentiable solutions . . . . .	197
5.2.1	More on the hypoellipticity of elliptic complexes . . . . .	197

5.2.2	An auxiliary result . . . . .	198
5.2.3	Proof of the theorem . . . . .	198
5.2.4	A generalization of the Stone-Weierstrass Theorem . . . . .	199
5.3	Approximation by potentials . . . . .	201
5.3.1	A digression . . . . .	201
5.3.2	Analogy with rational approximation . . . . .	201
5.3.3	Examples . . . . .	202
5.4	Localization property under approximation on compacta by solutions of a system with surjective symbol . . . . .	203
5.4.1	The validity range . . . . .	203
5.4.2	Localization property . . . . .	203
5.4.3	The necessity of condition $(U)_s$ . . . . .	204
<b>6</b>	<b>Approximation in spaces of smooth functions</b> . . . . .	<b>206</b>
6.1	Approximation of high order . . . . .	206
6.1.1	Further look at the approximation problem . . . . .	206
6.1.2	The main theorem . . . . .	207
6.1.3	Notes . . . . .	208
6.2	Approximation on the closure of a domain with the strong cone property . . . . .	208
6.2.1	Approximation of lower order . . . . .	208
6.2.2	The role of the connectedness of the complement . . . . .	209
6.2.3	Walsh theorem . . . . .	210
6.2.4	Bernstein theorems for elliptic equations . . . . .	211
6.3	Approximation on nowhere dense compact sets . . . . .	213
6.3.1	Hartogs-Rosenthal theorem for systems with surjective symbol . . . . .	213
6.3.2	A generalization of the Lavrent'ev Theorem . . . . .	213
6.3.3	Further remarks on the Hartogs-Rosenthal theorem . . . . .	214
6.3.4	Systems elliptic in the sense of Douglis-Nirenberg . . . . .	215
6.3.5	The case of totally disconnected compact sets . . . . .	217
6.3.6	More on the Weierstrass Theorem . . . . .	219
6.3.7	The general case . . . . .	223
6.3.8	Overdetermined systems of canonical type . . . . .	226
6.3.9	Approximation by harmonic vector fields . . . . .	228
6.4	Capacitary criteria of Vitushkin type for approximation in spaces of smooth functions . . . . .	229
6.4.1	A capacitary criterion . . . . .	229
6.4.2	Discussion of the theorem . . . . .	230
6.4.3	Approximation on compacta whose complements have the cone property . . . . .	231

<b>7</b>	<b>Approximation in Hölder spaces</b>	<b>233</b>
7.1	Approximation of high order in Hölder spaces . . . . .	233
7.1.1	Description of the annihilator of the subspace of solutions . . . . .	233
7.1.2	The range $s \geq p$ . . . . .	234
7.2	Approximation of lower order in Hölder spaces . . . . .	235
7.2.1	A counterexample . . . . .	235
7.2.2	A brief review . . . . .	236
7.2.3	Reduction . . . . .	236
7.3	Approximation criteria in terms of Hausdorff content . . . . .	237
7.3.1	Approximation on compacta of measure zero . . . . .	237
7.3.2	Approximation on nowhere dense compacta . . . . .	238
7.3.3	Further results . . . . .	238
7.4	Capacitary criteria of Vitushkin type for approximation in spaces of Hölder functions . . . . .	239
7.4.1	A capacitary criterion . . . . .	239
7.4.2	Discussion of the theorem . . . . .	240
7.4.3	Approximation on compacta whose complements have the cone property . . . . .	241
<b>8</b>	<b>Approximation in Sobolev spaces</b>	<b>242</b>
8.1	Approximation of high order in Sobolev spaces . . . . .	243
8.1.1	The annihilator of $sol(K)$ in $W^{s,q}(K)^k$ . . . . .	243
8.1.2	The range $s \geq p$ . . . . .	244
8.2	Approximation of lower order in Sobolev spaces . . . . .	245
8.2.1	Reducing approximation of lower order to a problem of spectral synthesis . . . . .	245
8.2.2	Approximation in Sobolev spaces on compact sets by potentials with densities supported on the boundary . . . . .	247
8.2.3	Degenerate cases of approximation in Sobolev spaces on compact sets with empty interior . . . . .	249
8.2.4	Degenerate cases of approximation in Sobolev spaces on arbitrary compact sets . . . . .	251
8.2.5	Uniform approximation on compact sets by potentials with densities supported on the boundary . . . . .	254
8.2.6	Degenerate cases of uniform approximation on nowhere dense compact sets . . . . .	255
8.2.7	Distinguished case of uniform approximation on nowhere dense compact sets . . . . .	257
8.2.8	Absence of degenerate cases of uniform approximation on compact sets with nonempty interior . . . . .	259
8.3	Approximation criteria in terms of Bessel capacity . . . . .	262
8.3.1	The case of nowhere dense compact sets . . . . .	262
8.3.2	The problem for arbitrary compact sets . . . . .	263

8.3.3	Approximation criteria in terms of special capacities . . . . .	264
8.3.4	Bounded point evaluations . . . . .	266
8.4	Capacitary criteria of Vitushkin type for approximation in spaces of Sobolev functions . . . . .	268
8.4.1	Statement of the theorem . . . . .	268
8.4.2	Comments . . . . .	269
8.4.3	Proof of the direct part, 1) $\Rightarrow$ 2) . . . . .	270
8.4.4	Proof of the converse part, 3) $\Rightarrow$ 1) . . . . .	273
<b>9</b>	<b>Generalized boundary values of solutions of a system with injective symbol</b>	<b>277</b>
9.1	Golubev series for solutions of elliptic equations . . . . .	278
9.1.1	Statement of the main results . . . . .	278
9.1.2	The converse theorem . . . . .	280
9.1.3	A basic special case . . . . .	281
9.1.4	Inductive limit topology in the space of solutions on a compact set . . . . .	282
9.1.5	Banach spaces $l^{q'}(r)^K$ . . . . .	283
9.1.6	Inductive limit of the spaces $l^{q'}(r)^K$ . . . . .	285
9.1.7	Another topology in the space of solutions on a compact set . . . . .	286
9.1.8	The role of local connectedness . . . . .	287
9.1.9	Equivalence of two topologies on $Sol(K, P')$ . . . . .	290
9.1.10	Conclusion of proof . . . . .	291
9.1.11	A variant of Laurent-series expansion . . . . .	293
9.1.12	Separation of singularities into atomic singularities . . . . .	293
9.1.13	Representation of solutions by boundary integrals . . . . .	294
9.1.14	Solutions with poles . . . . .	294
9.1.15	An example for harmonic functions . . . . .	296
9.1.16	Further results . . . . .	296
9.1.17	Hyperfunctions . . . . .	297
9.2	The Dirichlet problem for the generalized Laplacian by means of generalized functions . . . . .	298
9.2.1	Green operators . . . . .	298
9.2.2	Dirichlet systems . . . . .	298
9.2.3	Green's formula for the generalized Laplacian . . . . .	300
9.2.4	The Dirichlet problem . . . . .	302
9.2.5	Function spaces . . . . .	304
9.2.6	The operator related to the Dirichlet problem in the complete scale of Sobolev spaces . . . . .	306
9.2.7	Fredholm operators . . . . .	307
9.2.8	Theorem on a Complete Set of Isomorphisms . . . . .	309
9.3	Traces on the boundary of generalized solutions of the Dirichlet equation . . . . .	312

9.3.1	Weak solutions of the Dirichlet problem . . . . .	313
9.3.2	Traces on the boundary of weak solutions to the Dirichlet equation . . . . .	314
9.3.3	Traces on the boundary of solutions in the domain . . . . .	317
9.3.4	Remarks . . . . .	319
9.3.5	Traces of generalized solutions on parallel hypersurfaces . . . . .	320
9.3.6	Solutions of finite order of growth near the boundary . . . . .	322
9.3.7	Local increase of smoothness . . . . .	323
9.3.8	Green's function . . . . .	324
9.3.9	Problems with power singularities . . . . .	328
9.4	Weak limit values on the boundary of solutions of a system with injective symbol . . . . .	328
9.4.1	Green's formula for solutions of finite order of growth . . . . .	328
9.4.2	Weak limit values . . . . .	329
9.4.3	Equivalence of strong and weak limit values . . . . .	331
9.4.4	A characterization . . . . .	333
9.4.5	Miscellaneous . . . . .	334
<b>10</b>	<b>The Cauchy problem for a system with injective symbol</b> . . . . .	<b>335</b>
10.1	Green-type integral . . . . .	336
10.1.1	Definition and simple properties . . . . .	336
10.1.2	The Sokhotskii-Plemelj formulas . . . . .	338
10.1.3	An application to the Cauchy problem . . . . .	340
10.2	Iterations of the Green-type integral . . . . .	342
10.2.1	Prologue . . . . .	342
10.2.2	A theorem on iterations . . . . .	344
10.2.3	The inner product $h(\cdot, \cdot)$ . . . . .	346
10.2.4	Solvability conditions for $Pu = f$ . . . . .	350
10.2.5	A remark about the $\bar{\partial}$ -problem . . . . .	353
10.2.6	An application to the Dirichlet problem . . . . .	355
10.3	Solvability of the Cauchy problem in the class of distributions of finite order . . . . .	355
10.3.1	Further look at the Cauchy problem . . . . .	355
10.3.2	Tangential equation . . . . .	357
10.3.3	Reduction to the Cauchy problem for the generalized Laplacian . . . . .	358
10.3.4	Solvability of the Cauchy problem with data on the whole boundary . . . . .	362
10.3.5	Criterion of solvability of the Cauchy problem with data on a boundary subset . . . . .	363
10.3.6	A concluding remark . . . . .	365
10.4	Carleman function . . . . .	366
10.4.1	Definition . . . . .	366
10.4.2	Existence . . . . .	367

10.4.3	Carleman formula . . . . .	368
10.4.4	Conditional stability of the Cauchy problem . . . . .	369
10.4.5	The system of elasticity theory . . . . .	370
<b>11</b>	<b>Method of Fischer-Riesz equations in the Cauchy problem for a system with injective symbol</b>	<b>374</b>
11.1	Operator-theoretic foundations of the method of Fischer-Riesz equations . . . . .	375
11.1.1	Abstract problem in Hilbert spaces . . . . .	375
11.1.2	Special bases . . . . .	375
11.1.3	Solvability . . . . .	377
11.1.4	Approximate solution . . . . .	379
11.2	Hardy spaces . . . . .	380
11.2.1	A further look at generalized boundary values . . . . .	380
11.2.2	Generalized Hardy spaces . . . . .	384
11.2.3	Boundary kernel function . . . . .	386
11.2.4	Bergman formula . . . . .	388
11.2.5	Relation with Green's function . . . . .	389
11.3	Analysis of the Cauchy problem . . . . .	389
11.3.1	Special bases for the Cauchy problem . . . . .	389
11.3.2	Examples of special bases . . . . .	391
11.3.3	Solvability of the Cauchy problem . . . . .	393
11.3.4	Approximate solutions of the Cauchy problem . . . . .	396
11.3.5	Zin's theorems . . . . .	398
11.3.6	Traces of holomorphic functions on subsets of Shilov's boundary . . . . .	400
11.3.7	Another approach . . . . .	402
11.4	Analysis of the Dirichlet problem . . . . .	402
11.4.1	Basic assumptions . . . . .	403
11.4.2	Special bases in the Dirichlet problem . . . . .	405
11.4.3	Examples of special bases . . . . .	406
11.4.4	A criterion of solvability of the Dirichlet problem . . . . .	408
11.4.5	Regularization of solutions of the Dirichlet problem . . . . .	410
11.4.6	Some calculations for the classical Dirichlet problem . . . . .	412
<b>12</b>	<b>Bases with double orthogonality in the Cauchy problem for a system with injective symbol</b>	<b>415</b>
12.1	An operator-theoretic approach . . . . .	417
12.1.1	The abstract framework . . . . .	417
12.1.2	Abstract Bergman Theory . . . . .	420
12.1.3	Further horizons . . . . .	423
12.1.4	An alternative method . . . . .	425
12.1.5	Extremal property . . . . .	427
12.2	Analysis of the Cauchy problem in terms of surface bases with double orthogonality . . . . .	429

12.2.1	The main step . . . . .	429
12.2.2	Surface bases . . . . .	430
12.2.3	Analysis of the Cauchy problem . . . . .	431
12.2.4	Notes . . . . .	432
12.3	Analysis of the Cauchy problem in terms of solid bases with double orthogonality . . . . .	433
12.3.1	Formulation of the problem . . . . .	433
12.3.2	Green-type integral . . . . .	434
12.3.3	Main lemma . . . . .	435
12.3.4	The Cartan-Kähler Theorem . . . . .	437
12.3.5	Extension problem . . . . .	438
12.3.6	Solid bases . . . . .	439
12.3.7	Solvability of the Cauchy problem . . . . .	441
12.3.8	Approximate solution . . . . .	443
12.3.9	Example for harmonic functions . . . . .	446
12.3.10	A stability set . . . . .	446
12.4	Applications to matrix factorizations of the Laplace equation . . . . .	448
12.4.1	The Cauchy problem . . . . .	448
12.4.2	Green-type integral . . . . .	449
12.4.3	A solid basis of harmonic polynomials . . . . .	451
12.4.4	An expansion of the fundamental solution . . . . .	452
12.4.5	A solvability criterion . . . . .	453
12.4.6	Regularization . . . . .	454
