## PART I. THE EVOLVING LANDSCAPE

|   |           |
|---|-----------|
| <b>Chapter 1. The Changing Scene</b>                  | <b>3</b>  |
| <b>Chapter 2. Geomorphology and the Field Problem</b> | <b>10</b> |
| Introduction  | 10        |
| A Mountain Block in a Semiarid Climate                | 10        |
| A Meandering River Cut into Bedrock                   | 18        |
| Benches along a Sea Coast                             | 22        |

## PART II. PROCESS AND FORM

|  |           |
|--|-----------|
| <b>Chapter 3. Climate and Denudational Processes</b>                 | <b>27</b> |
| Introduction: Processes of Upbuilding and of Downwasting             | 27        |
| Characteristics and Classification of Processes                      | 29        |
| Erodibility  | 37        |
| Morphogenetic Regions  | 40        |
| Interaction of Vegetation, Runoff, and Sediment Yield:<br>an Example | 46        |
| Effective Climate in Geomorphology                                   | 49        |
| The Annual Water Budget  | 49        |
| Distribution of the Total Water Supply                               | 51        |
| Frequency Distribution of Climatic Events                            | 52        |
| Streamflow Fluctuation   | 58        |
| Flood Frequency  | 63        |
| The Frequency Concept and Geomorphic Processes                       | 67        |
| Landforms in Relation to Frequency of Climatic Events                | 80        |
| <b>Chapter 4. Weathering</b>   | <b>97</b> |
| Rocks and Water—the Components of Weathering                         | 97        |
| Materials Subject to Weathering                                      | 99        |

|   |            |
|---|------------|
| Composition of Rain and Snow in Relation to Weathering        | 101        |
| Mineral-water Reactions                                       | 104        |
| Products of Chemical Weathering and Some Determining Factors  | 107        |
| Products of Weathering—Clay Minerals                          | 107        |
| Effects of Removal by Erosion                                 | 108        |
| Effects of Weathering Sequence                                | 109        |
| Effects of Transport of Materials                             | 110        |
| Effects of Precipitation and Temperature                      | 111        |
| Organic Matter  | 112        |
| Processes of Physical Weathering                              | 113        |
| Products of Physical Weathering                               | 114        |
| Rates of Weathering   | 116        |
| Soils: Introduction   | 116        |
| Factors That Affect Soil Formation                            | 118        |
| Precipitation   | 121        |
| Parent Material   | 123        |
| Topography  | 126        |
| Biologic Factors  | 127        |
| <b>Chapter 5. The Drainage Basin as a Geomorphic Unit</b>     | <b>131</b> |
| Numbers, Lengths, and Orders of Stream Channels               | 134        |
| Drainage Density and Texture                                  | 142        |
| Description of the Drainage Basin in Cross Section            | 149        |
| <b>Chapter 6. Water and Sediment in Channels</b>              | <b>151</b> |
| Introduction  | 151        |
| Forces Acting in Channels                                     | 152        |
| Velocity and Its Distribution                                 | 153        |
| Factors Controlling Flow Velocity                             | 156        |
| Energy Losses in Streamflow                                   | 160        |
| Measurement of Velocity and Discharge                         | 166        |
| The Debris Load of Rivers: Introduction                       | 169        |
| The Nature of Fluid Force and Its Relation to Debris Movement | 173        |
| Bed Load and Suspended Load                                   | 180        |
| Computation of Sediment Load                                  | 181        |
| Measurement of Sediment Load                                  | 185        |
| The Stream Bed and Its Description                            | 188        |

|   |            |
|---|------------|
| <b>Chapter 7. Channel Form and Process</b>                          | <b>198</b> |
| Shape of the Channel  | 198        |
| Riffles and Bars  | 203        |
| Variation of Hydraulic Characteristics at a Given Cross<br>Section  | 215        |
| River-bed Scour During Floods                                       | 227        |
| Variation of Hydraulic Characteristics in a Downstream<br>Direction | 241        |
| Longitudinal Profile of the River Channel                           | 248        |
| Observations on Artificial Base Level                               | 258        |
| Equilibrium, River Profiles, and Channel Geometry                   | 266        |
| Channel Pattern: Introduction                                       | 281        |
| Straight Channels   | 281        |
| Braided Channels  | 284        |
| Geometry of Meanders  | 295        |
| Flow in Meanders  | 298        |
| Initiation and Development of Meanders                              | 301        |
| Meandering Valleys  | 308        |
| The River Flood Plain: Introduction                                 | 317        |
| Floods and the Flood Plain  | 319        |
| Flood Plain Formation   | 322        |
| <b>Chapter 8. Hillslope Characteristics and Processes</b>           | <b>333</b> |
| Features of Slopes  | 333        |
| Controls of the Form of Hillslopes                                  | 336        |
| Relation to Lithology and Environmental Controls                    | 337        |
| Mass Movements: Introduction  | 337        |
| Landslides and Rockfalls  | 338        |
| Rapid Flows of Wet Debris   | 341        |
| Creep   | 344        |
| Overland Flow: General  | 353        |
| Runoff  | 354        |
| Erosion   | 357        |
| Lithology and Form  | 363        |
| Climate and Form  | 367        |
| Examples of Slope Forms in Different Regions                        | 370        |
| Spitzbergen and Scandinavia   | 370        |
| Central Appalachian Mountain Region                                 | 372        |

|   |     |
|---|-----|
| Hawaii  | 374 |
| Southern Sudan                                  | 377 |
| Southwestern United States                      | 379 |
| South Africa                                    | 381 |
| Some Generalizations on the Forms of Hillslopes | 383 |

### PART III. THE EFFECTS OF TIME

|   |            |
|---|------------|
| <b>Chapter 9. Geochronology</b>   | <b>389</b> |
| Introduction  | 389        |
| Historical Records  | 389        |
| Dendrochronology  | 393        |
| Archeological Methods   | 396        |
| Varves  | 397        |
| Pollen Analysis   | 398        |
| Radioactivity   | 402        |
| An Example of Geochronologic Problems                                   | 405        |
| <br>  |            |
| <b>Chapter 10. Drainage Pattern Evolution</b>                           | <b>411</b> |
| Development of Rill Systems   | 411        |
| Effect of Longitudinal Profile on Tributary Junctions                   | 414        |
| Probability and the Drainage Network                                    | 416        |
| Evolution of the Drainage Net   | 420        |
| Modes of Drainage Extension   | 428        |
| Limits of Drainage Development  | 430        |
| <br>  |            |
| <b>Chapter 11. Channel Changes with Time</b>                            | <b>433</b> |
| Channel Aggradation and Accumulation of Valley Alluvium                 | 433        |
| Degradation: Headcuts and Gullies                                       | 442        |
| The Discontinuous Gully   | 448        |
| Degradation of Channels as a Result of Changes in<br>Hydrologic Regimen | 453        |
| River Terraces  | 458        |
| Terrace Sequences and Correlation of Terrace Remnants                   | 465        |
| Paleosols   | 468        |
| River Terraces and the Field Problem                                    | 474        |

|  |             |
