Boca Raton, New York London Tokyo

Contents

I	Non-precise data and their formal description	1
1	Non-precise data	3
2	Non-precise numbers and characterizing functions	7
3	Construction of characterizing functions	23
4	Non-precise vectors	33
5	Functions of non-precise quantities and non-precise functions	37
II	Descriptive statistics with non-precise data	43
6	Non-precise samples	45
7	Histograms for non-precise data	49
8	Cumulative sums for non-precise data	57
9	Empirical distribution function for non-precise data	61
10	Empirical fractiles for non-precise data	69
III	Foundations for statistical inference with non-precise data	73
11	Combination of non-precise observations	75
12	Sample moment for non-precise observations	85
13	Sequences of non-precise observations	95

IV	Classical statistical inference for non-precise data	99
14	Point estimators for parameters	101
15	Confidence regions for parameters	109
16	Nonparametric estimation	115
17	Statistical tests and non-precise data	129
V	Bayesian inference for non-precise data	133
18	Bayes' theorem for non-precise data	135
19	Bayesian confidence regions based on non-precise data	143
20	Non-precise predictive distributions	151
21	Non-precise <i>a priori</i> distributions	155
22	Bayes' theorem for non-precise <i>a priori</i> distribution and non-precise data	161
23	Bayesian decisions based on non-precise information	171
	Outlook	177
