Contents

Preface to the Second Edition xiii
Preface to the First Edition xv

1. INTRODUCTION AND HISTORICAL BACKGROUND 3
History 5
The Discovery of X-Rays 6
The Discovery of X-Ray Diffraction 10
History of Clay Mineralogy 14
The Importance of Clay Mineralogy 17
Box 1.1 Clay Minerals as Catalysts 18
The Literature of Clay Mineralogy 22
Summary 23
References 24

2. NATURE AND PRODUCTION OF X-RAYS 28
Box 2.1 Other Methods 28
Safety and Protection 31
Box 2.2 Defining a Dose of Radiation 31
The Nature or X-Rays 33
Continuous or White Radiation 33
Characteristic Radiation 35
General Absorption of X-Rays 38
Characteristic Absorption 40
Equipment for Producing and Recording X-Rays 42
Stabilizing the Voltage 42
Generating X-Rays 43
The Diffractometer 44
Step-Scanning with Automated Diffractometers 49
The Single-Crystal Monochromator 52
The Detector 52
Signal Processing Circuitry 54
The Strip-Chart Recorder 55
An Example of a Checklist for Operating XRD Equipment 56

Summary 58
References 59

3. X-RAY DIFFRACTION 61
Scattering 62
Interference 64
Scattering from a Row of Atoms 64
Scattering from a Three-Dimensional Array of Atoms 67
Bragg's Law 69
Box 3.1 Diffraction and Reflection 70
The Arithmetic of Scattering 72
The Summation of Scattering Amplitudes 72
The Structure Factor F 77
Information from Intensity 79
The Reciprocal Lattice 80
Real versus Idealized Peaks on XRD Tracings 84
The Interference Function F: Diffraction from a Crystal Whose Unit Cell Has a Unitary Scattering Factor 88
The Lorentz-Polarization Factors 90
Putting It All Together—Building an 001 Diffraction Pattern 92
Exercise: Calculation of the Intensity from d(001) for Illite 97
Points to Remember 103
References 103

4. STRUCTURE AND PROPERTIES: GENERAL TREATMENT 104
General Structural Features 104
Tetrahedral Sheets 104
Octahedral Sheets 105
Dioctahedral and Trioctahedral 106
Joining the Sheets 107
Stacking the Layers 112
Properties 117
Total Charge, Layer or Permanent Charge, and Variable Charge 118
Electric Double Layer 120
Exchangeable Ions or Cation-Exchange Capacity 121
Interaction of Water with Clay Mineral Surfaces 123
Interaction with Organic Compounds 126
Classification 130
Box 4.1 Nomenclature 132
References 134

5. STRUCTURE, NOMENCLATURE, AND OCCURRENCES OF CLAY MINERALS 138
The Individual Clay Minerals 138
The 1:1 Layer Type 138

Serpentine minerals 139
Berthierine 139
Odinite 139
Kaolin minerals 140
Box 5.1 Uses of Kaolinite 144
Allophane and imogolite 145
The 2:1 Layer Type, x = 0 146
The 2:1 Layer Type, x ~ 1 146
The trioctahedral subgroup 147
The dioctahedral subgroup 147
The 2:1 Layer Types with x < 1 148
Illite 149
Glauconite 153
Smectite 155
Box 5.2 Alteration of Ash-Fall Layers 158
Vermiculite 158
Chlorite 162
Mixed-Layered Clay Minerals 167
Mixed-layering, interlayering, and interstratification 168
Illite/smectite (I/S) 170
Box 5.3 Reichweite or Ordering 171
Models for smectite-to-illite transition 176
MacEwan crystallite model 177
Fundamental particle model 177
Two-solid-solution model 179
Chlorite/smectite (C/S) 181
Serpentine/chlorite 183
Kaolinite/expandables (K/E) 184
Sepiolite and Palygorskite 185
The Origin of Clay Minerals 186
Summary 188
Exercise: Calculating Structural Formulas 189
Exercise: Making Structural Models of Layer Silicates 192
References 195

6. SAMPLE PREPARATION TECHNIQUES FOR CLAY MINERALS 204
Evaluating the Sample 204
Disaggregating the Rock 206
Separating Clay Minerals from Clastic Rocks 206
Separating Clay Minerals from Carbonate Rocks 207
Separating Clay Minerals from Sulfate Rocks 207
Separating Clay Minerals from Unconsolidated Materials 208
Box 6.1 Glacial Deposits, North American Interior 208

Chemical Pretreatments 209
Removal of Iron Oxides 209
Removal of Organic Materials 209
Saturating the Clay Minerals with Different Cations 210
Particle-Size Separation 211
Preparing the Oriented Clay Mineral Aggregates 214
The Glass Slide Method 214
The Smear Mount Method 215
The Millipore® Filter Transfer Method 216
The Centrifuged Porous Plate Method 218
Dealing with Curlers or Peelers 219
Making the Random Powder Mount 220
Everyday random powder packs 222
Freeze-dried random powder packs 222
Ethylene Glycol Solvation 224
Final Note 225
References 225

7. IDENTIFICATION OF CLAY MINERALS AND ASSOCIATED MINERALS 227
Clay Mineral Identification—General Principles 228
Illite and Glauconite 233
Chlorite and Kaolinite 233
Vermiculite 239
Smectite 241
Sepiolite, Palygorskite, and Halloysite 243
060 Reflections 244
The Use of *hkl* Reflections for the Determination of Polytypes 246
Chlorite Polytypes 246
The Kaolin Polytypes 247
The Micas, Illite, and Glauconite 247
Nonclay Minerals 248
Silica Minerals 250
Feldspar 252
Zeolites 254
Carbonates 255
Apatite, Pyrite, and Jarosite 256
Gypsum, Anhydrite, Celestite, and Barite 257
Lepidocrocite, Goethite, Gibbsite, and Anatase 258
Summary 259
References 259

8. IDENTIFICATION OF MIXED-LAYERED CLAY MINERALS 261
Méring's Principles and Mixed-Layered Nomenclature 263
The Q Rule, a Broadening Descriptor 266

Mixed-Layered Clay Minerals 270
Illite/Smectite 270
Chlorite/Smectite and Chlorite/Vermiculite 276
Kaolinite/Smectite 284
Serpentine/Chlorite 289
Mica/Vermiculite 292
Summary 296
References 296
9. QUANTITATIVE ANALYSIS 298
Required Sample Characteristics 299
Sample Length 300
Sample Thickness 301
Sample Position 306
Homogeneity of the Sample 307
Equations for Quantitative Analysis 308
Basic Quantitative Diffraction Equation 308
Derivation of a Working Form of the Equation for Analysis 313
The Method of the Orienting Internal Standard 316
Mineral Reference Intensities 317
General Comments 317
Calculated Mineral Reference Intensities 318
Practical Examples of the Application of Reference Intensities 321
Measurement of Peak Intensity 321
Comments and Summary 327
References 329

10. DISORDER IN SMECTITE, ILLITE/SMECTITE, AND ILLITE 330
Small Crystals in Reciprocal Space 331
Turbostratic Disorder 335
Theory 335
Smectite 339
Illite/Smectite 339
Rotational Disorder in Illite and Illite/Smectite 341
Cis-Vacant Illite and Interstratified *Cis*- and *Trans*-Vacant Illite/Smectite 349
Conclusions 356
References 357

APPENDIX: MODELING ONE-DIMENSIONAL X-RAY PATTERNS 359
The Input Variables 360
Simulating the Instrument 360
Describing the Clay Mineral 360
Theory 362
Structures of the Component Layers 366
Advanced Techniques 368
Pure Minerals 369

Compositional Superstructures 369
Layer Types Not Specifically Included 369
Atom Types Not Incorporated in the Model 370
Defect Broadening 370
References 371
