Contents

Preface	xi
1 Introduction	1
1.1 Traces of ice ages in the earth's history	1
1.2 Causes of ice ages	5
 SECTION I GENERAL QUATERNARY GEOLOGY	
2 Glacier Dynamics	11
2.1 Formation of glaciers	11
2.2 Glacier flow	14
2.3 Formation of Alpine-type ice-stream networks	16
2.4 Formation of continental ice sheets	17
2.5 Formation of marine ice sheets	23
2.6 Glacial erosion	24
2.7 Glacial transport	26
2.8 Glacier dynamics as exemplified by the Late Weichselian Scandinavian Ice Sheet	29
2.9 Methods of reconstructing glacier dynamics	32
2.9.1 Landforms	32
2.9.2 Striae	36
2.9.3 Long-axis orientation of clasts	41
2.9.4 Joint systems	45
2.9.5 Thrust directions	45
2.9.6 Moraine elevations	50
 SECTION II QUATERNARY DEPOSITS AND LANDFORMS	
3 Glacigenic Deposits and Landforms	55
3.1 Deposits of recent glaciers	55
3.1.1 Subglacial till	56

3.1.2	Other morainic deposits	59
3.2	Pleistocene glacial deposits	59
3.3	Post-depositional alteration	63
3.4	Glacial deposits	64
3.4.1	Drumlins	64
3.4.2	End moraines	67
3.4.3	Ice-decay landscapes	77
3.4.4	Kettle holes	80
4	Meltwater Deposits and Landforms	82
4.1	Discharge of modern glacial streams	82
4.2	Traces of Pleistocene meltwater activity	86
4.2.1	Tunnel channels	87
4.2.2	Buried channels	87
4.2.3	Eskers	92
4.2.4	Sandur plains, delta plains and gravel terraces	93
4.2.5	Kames	101
4.2.6	Ice-dammed lakes	104
4.2.7	Ice-marginal valleys	108
5	Periglacial Deposits and Landforms	110
5.1	Recent periglacial processes	110
5.1.1	Cryoplanation	114
5.1.2	Rock glaciers	115
5.1.3	Cryoturbation	116
5.1.4	Solifluction	117
5.1.5	Frost fissures and ice wedges	117
5.1.6	Pingos	121
5.1.7	Palsas	124
5.1.8	String mires	126
5.1.9	Thufur	126
5.2	Traces of Pleistocene periglacial processes	127
5.2.1	Fluvial processes	133
5.2.2	Aeolian processes	138
6	Terrestrial Interglacial Environments	146
6.1	Vegetation	146
6.2	Fauna	147
6.3	Weathering and soil formation	147
6.4	Human activities	153
7	Marine Environment	157
7.1	Sea-level changes	157
7.2	Marine circulation	162
7.3	Marine deposits	164
7.3.1	Deep sea	164

7.3.2 Shelf seas	168
7.4 Coasts	172
8 Methods of Investigating Glacial and Interglacial Deposits	176
8.1 Grain size	176
8.2 Erratics	177
8.3 Fine gravel and coarse sand	181
8.4 Clast morphology	186
8.5 Heavy minerals	187
8.6 Clay minerals	192
8.7 Geochemistry	193
8.8 Micromorphology	196
8.9 Magnetic susceptibility	197
8.10 Seismic investigations	199
8.11 Geophysical logging	201
8.12 Biological remains	204
8.12.1 Macroscopic plant remains	206
8.12.2 Pollen and spores	208
8.12.3 Diatoms	215
8.12.4 Mammals	215
8.12.5 Molluscs	217
8.12.6 Beetles	218
8.12.7 Foraminifera	219
8.12.8 Ostracods	220

SECTION III QUATERNARY STRATIGRAPHY

9 Principles of Stratigraphy	227
9.1 Chronostratigraphy	227
9.2 Lithostratigraphy	227
9.3 Biostratigraphy	228
9.4 Other stratigraphies	228
10 Dating Quaternary Deposits	230
10.1 Oxygen isotopes	231
10.2 Magnetostratigraphy	237
10.3 Radiocarbon dating	238
10.4 Potassium/argon dating	239
10.5 Thorium/uranium dating	240
10.6 Fission-track dating	240
10.7 Thermoluminescence, optical stimulated luminescence and electron spin resonance	241
10.8 Beryllium dating	242
10.9 Amino-acid dating	243
10.10 Varves	244

11 Quaternary Stratigraphy of Northern Europe	249
11.1 Palaeogeographic situation at the beginning of the Pleistocene	249
11.2 Subdivision of the Pleistocene in North Germany and the Netherlands	251
11.3 Praetiglian	254
11.4 Tiglian	254
11.5 Eburonian	255
11.6 Waalian	256
11.7 Menapian	257
11.8 Bavelian	257
11.9 Cromerian	258
11.10 Elsterian Cold Stage	261
11.11 Holsteinian Interglacial	268
11.12 Fuhne Cold Stage	272
11.13 Wacken Interglacial	272
11.14 Saalian Cold Stage	275
11.14.1 Older Saalian Glaciation	279
11.14.2 Middle Saalian Glaciation	282
11.14.3 Younger Saalian Glaciation	283
11.15 Eemian Interglacial	284
11.16 Weichselian Cold Stage	290
11.17 Holocene	309
11.18 Quaternary development of the Baltic Sea	311
11.18.1 Origin of the Baltic Sea	311
11.18.2 Postglacial development of the Baltic Sea	313
12 Quaternary History of the Alps	317
12.1 Tectonic framework	317
12.2 Origin of the valleys and basins	318
12.3 Classic subdivision of the Alpine Quaternary stratigraphy	323
12.4 Traces of old glaciations	325
12.5 Uhlenberg Interglacial	334
12.6 Günz Complex	334
12.7 Günz/Haslach Interglacial	335
12.8 Haslach Glaciation	335
12.9 Haslach/Mindel Interglacial	335
12.10 Mindel Glaciation	336
12.11 Mindel/Riss Interglacial	336
12.12 Riss Glaciation	338
12.13 Riss/Würm Interglacial	341
12.14 Würmian Cold Stage	344
12.15 Holocene	350
13 Quaternary History of North America	352
13.1 Late Tertiary	353
13.2 Early Pleistocene	355
13.3 Pre-Illinoian warm stages	357

13.4	Pre-Illinoian glacial stages	358
13.5	Pre-Illinoian/Illinoian Interglacial	359
13.6	Illinoian Glaciation	361
13.7	Sangamonian Interglacial	362
13.8	Wisconsinan Glaciation	365
13.8.1	Early Wisconsinan	365
13.8.2	Middle Wisconsinan	369
13.8.3	Late Wisconsinan	369
13.8.4	The Great Lakes	384
13.9	Holocene	398
14	Quaternary History of the Rivers	401
14.1	River Danube (Donau)	404
14.2	Rhine (Rhein) and tributaries	408
14.3	Thames	414
14.4	The Siberian rivers	419
14.5	Mississippi	424
14.6	Fluvial development during the Holocene	429
15	Loess Stratigraphy	434
SECTION IV PERSPECTIVE		
16	Overview	447
17	Outlook	455
	References	457
	Index	549
