Seismic Modelling of Earth Structure

edited by

Enzo Boschi, Göran Ekström and Andrea Morelli

EDITRICE COMPOSITORI

Contents

Preface - <i>Enzo Boschi, Göran Ekström and Andrea Morelli</i>	IX
1 A general view on the seismic inverse problem - <i>Guust Nolet</i>	
1.1 Introduction	1
1.1.1 Arrival times	1
1.1.2 Waveforms	3
1.2 An algebraic framework	4
1.2.1 Nonlinear waveform inversions	6
1.2.2 Adjoint methods	12
1.3 Data errors	13
1.3.1 Delay time errors	13
1.3.2 Errors in waveforms	14
1.4 The role of the (generalized) nullspace	15
1.5 Choosing a preferred solution	17
1.6 How sensitive are seismic data to Earth structure?	19
1.6.1 Ray width	19
1.6.2 Full waveforms	20
1.7 Conclusions	27
2 Long period seismology and the Earth's free oscillations - <i>John H. Woodhouse</i>	
2.1 Introduction	31
2.2 Equations of linear elasticity with gravitation and initial stress	32
2.3 Oscillations of a spherically symmetric Earth model	37
2.4 General characteristics of modal multiplets	45
2.5 Some asymptotic properties of free oscillations	55
2.6 Oscillations of an aspherical Earth model	57
3 Surface waves on a global scale - Influence of anisotropy and anelasticity - <i>Jean-Paul Montagner</i>	
3.1 Introduction	81
3.2 An anisotropic Earth	82
3.2.1 Seismic anisotropy at all scales	82
3.2.2 First order perturbation theory – operator formalism	85
3.2.3 Stationary and non-degenerate case	87
3.2.4 Time dependence	90
3.2.5 Plane case	95
3.2.6 Spherical case	105

3.3	Tomography of anisotropy	110
3.3.1	Forward problem	110
3.3.2	Inverse problem	114
3.3.3	Practical implementation	118
3.3.4	Geophysical applications	118
3.4	An anelastic Earth	123
3.4.1	Theoretical background	123
3.4.2	Measurements of attenuation using surface waves	127
3.4.3	Future developments	130
3.5	Conclusions	131
4	Surface wave inversions on a regional scale - <i>Roel Snieder</i>	
4.1	Introduction	149
4.2	Basic equations	149
4.3	Case 1, smooth perturbations	153
4.4	Case 2, smooth and weak perturbations	155
4.4.1	Derivation of the basic equations	155
4.4.2	Surface wave inversions based on dispersion measurements	157
4.4.3	Mapping the local phase velocity to a perturbation with depth	160
4.4.4	Application to waveform inversions	163
4.4.5	Mode coupling, presentation of a paradox	164
4.5	Case 3, weak perturbations	166
4.5.1	The Born approximation for surface waves	167
4.5.2	Application to waveform inversion	169
4.6	Regional and global inversions	173
5	Construction of synthetics for 2D structures; core phases - <i>Don V. Helmberger, Lian-She Zhao and Ed Garnero</i>	
5.1	Introduction	183
5.2	Review of GRT theory and local stretching	188
5.3	D'' structure and lower mantle triplications	193
5.4	Modeling outer-core phases	199
5.4.1	D'' heterogeneity and effects on SKS, SKKS ... (SmKS)	207
5.4.2	Modeling SP _a KS	212
5.5	Discussion and conclusions	220
6	Seismic ray tracing - <i>Jean Virieux</i>	
6.1	Introduction	223
6.2	Wave propagation	228
6.3	How to solve wave equations	233
6.3.1	Space methods	233
6.3.2	Spectral methods	234
6.3.3	Asymptotic methods	234
6.4	Scalar high frequency approximation	234
6.4.1	Ansatz of the ray theory	235
6.4.2	Eikonal equation	239
6.4.3	Transport equation	246

6.5	Analytical examples of ray tracing	255
6.5.1	Homogeneous media	255
6.5.2	Constant gradient of the velocity	255
6.5.3	Constant gradient of the square of the slowness	258
6.6	Arbitrary variation along one direction	260
6.6.1	Ray tracing as quadrature equations	260
6.6.2	Triplication and shadow zones	265
6.7	Variational approach	266
6.7.1	Euler equations	266
6.7.2	Lagrangian formulation	267
6.7.3	Hamiltonian formulation	268
6.8	Validity of the ray theory	268
6.8.1	Validity of the asymptotic approach	269
6.8.2	Classification	269
6.9	Ray tracing in heterogeneous media	274
6.9.1	Setting up ray tracing equations	274
6.9.2	How to solve these ordinary differential equations	277
6.10	Paraxial theory or linearization of ray tracing	278
6.10.1	Paraxial rays	278
6.10.2	Beams of rays	283
6.11	Vector high frequency approximation	285
6.12	Interfaces	290
6.12.1	Discontinuity of first order	290
6.12.2	Boundary conditions for paraxial rays	292
6.12.3	Topology between interfaces and surrounding media	294
6.13	Synthetic seismograms	295
6.13.1	Difficulties of ray seismograms	295
6.13.2	WKB seismograms	295
6.13.3	Gaussian beam summation	299
6.14	Conclusions	300
7	Portable broadband seismology: results from an experiment in New Zealand - <i>David Gubbins</i>	
7.1	Instrumentation, deployment, and database	305
7.1.1	Modern field seismology	305
7.1.2	Instrumentation	306
7.1.3	The Leeds Tararua Array, New Zealand	310
7.1.4	The database	316
7.2	Precursive phases travelling in the subducted plate	321
7.2.1	Background	321
7.2.2	Travel times	327
7.2.3	Polarisation of the P wave precursor	335
7.2.3.1	Use of the polarization information to infer velocity structure	337
7.2.3.2	Models derived from polarization information	342
7.2.3.3	Travel times	345
7.2.3.4	Polarization analysis of the 1 Hz arrival	347

7.2.4	Dispersion of the P wave precursor	348
7.2.4.1	Method for measuring dispersion	349
7.2.4.2	Observed dispersion	350
7.2.4.3	Modelling the precursors	351
7.3	Converted phases from the top of the plate	354
7.3.1	The "X" phase	354
7.3.2	Travel times and transmission coefficients	357
7.3.3	Method of travel time inversion	361
7.3.4	Results	365
7.4	Shear wave splitting and anisotropy	367
7.4.1	Splitting of shear waves	367
7.4.2	Detecting and measuring anisotropy	369
7.4.3	Split ScS	371
7.4.4	SKS splitting	377
7.5	Earthquake source mechanisms	384
7.5.1	Introduction	384
7.5.2	Event selection	385
7.5.3	Application of the waveform method	388
7.5.4	Results	389
7.5.5	Discussion	389
7.6	Conclusions	393
8	The structure of the lowermost mantle as determined from using seismic arrays - <i>Michael Weber, J. Peter Davis, Christine Thomas, Frank Krüger, Frank Scherbaum, Jörg Schlittenhardt and Martin König</i>	
8.1	Introduction	399
8.2	History	401
8.3	Seismic phases	404
8.4	Observations	405
8.4.1	P	405
8.4.2	P _{dif}	406
8.4.3	PdP	409
8.4.3.1	GRF-data	409
8.4.3.2	GRSN-data	414
8.4.3.3	Double Beam Method (DBM)	418
8.4.3.4	Where else?	425
8.5	Forward modelling	428
8.5.1	1D models	428
8.5.2	2D/3D models	431
8.6	Conclusions	435
9	Seismic tomography and mineral physics - <i>Giorgio Ranalli</i>	
9.1	Introduction	443
9.2	Mineralogical composition of the mantle	444
9.3	Density and elastic parameters of mantle phases	447
9.4	Thermal parameters of mantle phases	449

9.5	Velocity – temperature – density relations	454
9.6	Geodynamic considerations	458
10	Combined results from mineral physics, tomography and mantle convection and their implications on global geodynamics - <i>David A. Yuen, Ondrej Čadek, Peter van Keken, David M. Reuteler, Hana Kyvalova and Brigid A. Schroeder</i>	
10.1	Introduction	463
10.2	Conversion of seismic to thermal anomalies in the lower mantle	464
10.3	Mantle flush dynamics	475
10.4	Formation of megaplumes in the lower mantle	486
10.4.1	Dynamical effects from lower-mantle viscosity parameterized according to melting curves	486
10.4.2	Effects of a viscosity maximum in the lower mantle viscosity on mantle circulations with two phase transitions	490
10.4.3	Megaplume dynamics and the consequence on backward flush instability and slab retrograde motions	496
10.5	Concluding remarks and outlook	499
11	Earth's mantle in three dimensions - <i>Adam M. Dziewonski</i>	
11.1	Introduction	507
11.2	The data types and modeling approaches	511
11.3	Spectrum of heterogeneity	517
11.3.1	The global spectrum of SS residuals	518
11.3.2	Synthetic tests	521
11.3.3	Other observations and geodynamic functions	524
11.4	3D Earth models	528
11.4.1	Model representation	530
11.4.2	Perturbation theory	531
11.4.2.1	Travel times	531
11.4.2.2	Waveforms	532
11.4.3	Inversion	536
11.4.4	Example of application: model S12/WM13 of Su <i>et al.</i> , 1994	538
11.4.4.1	Velocity maps	539
11.4.4.2	Cross-sections	541
11.4.4.3	Three-dimensional view of the model	546
11.4.4.4	Discussion of model S12/WM13	548
11.5	Other developments	553
11.5.1	'Short period' surface waves	553
11.5.2	Recent inversions for P- and S-velocities	556
11.5.3	Joint inversions of P- and S-wave sensitive data	559
11.5.4	Anisotropy of the inner core	560
11.5.5	Other issues	564
