

BASIC CONCEPTS OF

Environmental Chemistry

Des W. Connell

LEWIS PUBLISHERS

Boca Raton

New York

CONTENTS

PPRINCIPLES OF ENVIRONMENTAL CHEMISTRY

Chapter 1

The Role and Importance of Environmental Chemistry.....	3
I. Alchemy.....	3
II. The Chemical Age.....	4
III. Environmental Chemistry.....	5
IV. The Scope of Environmental Chemistry.....	7
V. Chemistry in Environmental Management.....	9
VI. Basic Concept of This Book.....	10
VII. Key Points.....	11
References.....	12
Chapter 1 Problems.....	13
Chapter 1 Solutions.....	14

BASIC PROPERTIES OF CHEMICALS IN THE ENVIRONMENT

Chapter 2

Bonds and Molecules —Their Influence on Physical Chemical Properties in the Environment.....	17
I. Introduction.....	17
II. States of Matter in the Environment.....	17
III. Nature of Bonds.....	19
IV. Polarity of Molecules.....	22
V. Ionic Compounds.....	23
VI. Intermolecular Forces.....	25
VII. Physical Chemical Properties of Compounds.....	27
A. Melting Point (mp).....	27
B. Boiling Point (bp).....	28
C. Solubility.....	29
VIII. Partition Behavior.....	35
IX. Key Points.....	39
References.....	40
Chapter 2 Problems.....	41
Chapter 2 Solutions.....	44

Chapter 3

Environmental Transformation and Degradation Processes.....	45
I. Introduction.....	45
II. Abiotic Transformation and Degradation.....	46
A. Oxidation through Combustion.....	46
B. Phototransformation.....	50
C. Estimation of Photolysis Rate Constants or Phototransformation Rate Constants.....	53

D. Hydrolysis.....	57
III. Biotransformation and Biodegradation	59
A. Microbial Transformation	59
B. Types of Microbial Degradation	60
C. Patterns of Growth	60
D. Co-metabolism	61
E. Chemical Processes	61
F. Terrestrial Systems	63
G. Degradation by Higher Organisms	63
IV. Kinetics of Transformation and Degradation.....	64
A. Kinetic Expressions.....	65
B. Volatilization.....	68
V. Key Points.....	69
References.....	71
Chapter 3 Problems	72
Chapter 3 Solutions	74
Chapter 4	
Environmental Toxicology.....	77
I. Introduction.....	77
II. Routes and Mechanisms of Toxicant Entry to Organisms	78
A. Mechanisms of Entry to Organisms	78
B. Chemical Properties of Compounds that Cross Cell Membranes	79
C. Routes of Entry to Organisms	80
III. Distribution of Toxicants Within the Organism.....	82
IV. Biotransformation of Toxicants	84
A. Principles of Biotransformation.....	84
B. Phase I Transformations.....	84
C. Phase II Transformations	85
D. Sites of Biotransformation	85
V. Excretion of Toxicants.....	85
VI. Classes of Poisons Based on Effect.....	86
VII. Quantitative Principles of Toxicology.....	86
A. Background.....	86
B. Measures of Toxicity.....	88
C. Factors Influencing Toxicity.....	90
VIII. Experimental Testing for Toxicity — Bioassays	93
A. Types of Bioassays.....	93
B. Selection of Test Organisms and the Route of Toxicant Exposure	94
C. Conducting a Bioassay.....	95
D. Calculating Toxicological Data.....	95
IX. Alternative, More Humane Methods for Toxicity Assessment	97
X. Key Points.....	97
References.....	99
Chapter 4 Problems	100
Chapter 4 Solutions	102

CONTAMINANTS IN THE ENVIRONMENT

Chapter 5

Petroleum Hydrocarbons	107
I. Introduction.....	107
II. Chemical Nature of Petroleum.....	107
A. Hydrocarbons	107
B. Non-Hydrocarbons	109
II. Petroleum Hydrocarbons in the Environment.....	112
A. Dispersion.....	112
B. Evaporation.....	113
C. Dissolution.....	114
D. Emulsion Formation.....	115
E. Photooxidation.....	115
F. Microbial Transformation	116
III. Petroleum and Aquatic Organisms.....	120
IV. Key Points.....	121
References.....	122
Chapter 5 Problems	123
Chapter 5 Solutions	124

Chapter 6

Polychlorinated Biphenyls (PCBs) and Dioxins.....	125
I. Introduction.....	125
II. The Naming System for PCBs And PCDDs — Nomenclature	126
III. Sources of Environmental Contamination	128
A. PCBs	128
B. Dioxins	130
IV. Physical Chemical Properties of PCBs and Dioxins	132
V. Environmental Distribution and Behavior.....	134
VI. Toxicity	140
A. PCBs	140
B. Dioxins	142
VII. Key Points.....	146
References.....	147
Chapter 6 Problems	148
Chapter 6 Solutions	150

Chapter 7

Synthetic Polymers — Plastics, Elastomers and Synthetic Fibers.....	153
I. Introduction.....	153
II. The Nature of Synthetic Polymers.....	154
III. Classification and Definitions.....	155
IV. Synthesis of Synthetic Polymers.....	157
A. Condensation and Addition Polymerization	157
B. Step Growth Polymerization	159
C. Chain Growth Polymerization	161

D. Cross-linking	167
V. Environmental Characteristics	168
A. Combustion	168
B. Biodegradation	169
C. Photodegradation	172
D. Recycling	175
VI. Key Points	175
References	177
Chapter 7 Problems	178
Chapter 7 Solutions	180

Chapter 8

Pesticides	181
I. Introduction	181
II. The Chlorinated Hydrocarbon Pesticides	182
A. Chemical Structure and Synthesis	183
B. Physical Chemical Properties	184
C. Environmental Properties	186
D. Bioconcentration Properties	187
E. Toxicity	189
F. Ecological Effects	189
III. The Organophosphate Insecticides	189
A. Chemical Form and Synthesis	190
B. Physical Chemical Properties	190
C. Environmental Properties	191
D. Toxic Activity	192
IV. The Carbamates	192
A. Environmental Properties	193
B. Mechanism of Toxic Action	193
V. Pyrethrins and Pyrethroids	194
A. Physical Properties	194
B. Mechanism of Action and Toxicology	195
C. Synthetic Pyrethroids	197
VI. Phenoxyacetic Acid Herbicides	197
VII. Key Points	198
References	200
Chapter 8 Problems	201
Chapter 8 Solutions	202

Chapter 9

Polycyclic Aromatic Hydrocarbons (PAHs)	205
I. Introduction	205
II. Chemical Nature of PAHs	206
III. Environmental Properties	207
IV. Formation of PAHs	207

A. Mechanisms of Formation	207
V. Sources of the PAHs.....	209
VI. Occurrence and Behavior of PAHs in the Environment.....	211
VII. Carcinogenicity and Toxicity of the PAHs	213
VIII. Effects on Human Health and the Natural Environment.....	215
IX. Key Points.....	215
References.....	216
Chapter 9 Problems	217
Chapter 9 Solutions	218

Chapter 10

Soaps and Detergents	221
I. Introduction.....	221
II. Surfactants — The Active Cleaning Agents	222
III. Synthesis	224
A. Soaps.....	224
B. Alkylbenzene Sulfonates and Alkyl Sulfates.....	227
C. Alkyl Ethoxylates.....	228
D. Alkyl Glucosides	228
IV. Detergents	229
A. Surfactant Components	229
B. Builders.....	230
C. Enzymes and Bleaches.....	231
V. Cationic Surfactants.....	232
VI. Toxicity	233
VII. Biodegradation.....	235
VIII. Sorption and Bioaccumulation	237
IX. Natural Surfactants	237
X. Key Points.....	237
References.....	240
Chapter 10 Problems	241
Chapter 10 Solutions	242

Chapter 11

Organometallic Compounds	243
I. Introduction.....	243
II. The Nature of Organometallic Compounds.....	243
III. Stability and Sources	245
A. Stability.....	245
1. Hydrolysis.....	245
2. Thermal Stability.....	246
3. Photolysis.....	248
4. Oxidation	249
5. Biotransformation	250

6. Summary	251
B. Sources	251
1. Formation in the Environment	251
2. Environmental Occurrence	252
IV. Behavior	253
A. Air	253
B. Water	254
C. Soils and Sediments	254
V. Estimation of Properties	256
VI. Organometallics of Environmental Importance	257
A. Organomercury Compounds	257
B. Organotin compounds	258
C. Organolead compounds	258
D. Organoarsenic compounds	260
VII. Key Points	261
References	261
Chapter 11 Problems	262
Chapter 11 Solutions	264

PROCESSES IN THE NATURAL ENVIRONMENT

Chapter 12

Photosynthesis and Respiration — Key Global Environmental Processes	269
I. Introduction	269
II. Overview of Photosynthesis and Respiration	269
III. Plant Physiology	270
IV. Photosynthesis	271
A. Absorption of Solar Energy	272
B. Light Reactions	273
C. Dark reactions	274
D. Overall Photosynthetic Process	275
V. Photorespiration	276
VI. Respiration	276
A. Glycolysis	278
B. Fermentation	278
C. The Tricarboxylic Acid Cycle	279
D. Oxidative Phosphorylation	279
E. Overall Respiration Process	280
VII. The Environmental Significance of Photosynthesis and Respiration	280
A. Past Effects	280
B. Present And Future Effects	284
VII. Key Points	286
References	287
Chapter 12 Problems	288
Chapter 12 Solutions	290

Chapter 13	
Chemical Evolution	293
I. Introduction.....	293
II. Conditions on Primitive Earth.....	294
III. Prebiotic Evolution of Organic Compounds.....	295
A. Simple Molecules.....	295
B. Condensation Agents.....	300
C. Prebiotic Macromolecules.....	302
IV. Protocells.....	305
V. Later Developments.....	308
VI. Key Points.....	310
References.....	312
Chapter 13 Problems	313
Chapter 13 Solutions	314

Chapter 14	
Chemistry of Natural Waters.....	317
I. Introduction.....	317
II. Physical Chemical Properties of Water.....	317
III. Organic Components in Natural Waters.....	321
IV. Carbon and Nitrogen Transformations in Natural Water Bodies	325
A. The Carbon Cycle	325
B. The Nitrogen Cycle.....	326
V. Estuarine Systems.....	326
A. Physical Interaction of Fresh- and Seawater in Estuaries.....	327
VI. Oceanic Systems.....	329
A. Salinity of Seawater	329
B. Vertical Depth Profiles of Seawater Composition.....	330
VII. Key Points.....	332
References.....	334
Chapter 14 Problems	335
Chapter 14 Solutions	336

Chapter 15	
Water Pollution	339
I. Introduction.....	339
II. Deoxygenating Substances	339
A. Background.....	339
B. Influence of Chemical Processes on Dissolved Oxygen.....	340
C. Measurement of the Oxygen-Reducing Capacity of a Wastewater — the BOD Test.....	341
D. Kinetics of BOD Reduction.....	342
E. The Dissolved Oxygen “Sag”.....	342
F. Seasonal Variations and Vertical Profiles of Dissolved Oxygen.....	344
G. Anaerobic Processes: Production of Poisonous Gases from Animal and Vegetable Wastes.....	345

H. The Effects of Organic Wastes	345
III. Nutrient Enrichment and Eutrophication	347
A. Background.....	347
B. Nutrients and Plant Growth	349
C. Sources and Losses of Nutrients.....	349
D. Nutrient Transformations in a Water body	351
E. Photosynthesis and Diurnal Variations in Dissolved Oxygen.....	351
F. Characteristics of Nutrient Enrichment and Trophic Status.....	353
G. The Blue-Green Algae (Cyanobacteria)	354
H. The Future	355
IV. Key Points.....	355
References.....	357
Chapter 15 Problems	358
Chapter 15 Solutions	360

Chapter 16

Atmospheric Chemistry and Pollution	363
I. Introduction.....	363
II. Reactive Intermediates in the Atmosphere.....	363
A. Hydroxyl Radical	363
B. Ozone.....	366
C. Nitrate Radical.....	367
III. Types of Hydrocarbons in the Troposphere.....	368
A. Methane and the Greenhouse Effect.....	368
B. Other Hydrocarbons	372
C. Compounds Containing O, N and S Related to the Hydrocarbons	375
D. Halogenated Hydrocarbons, Chlorofluorocarbons (CFCs) and the Ozone Layer	376
II. Reaction of Organic Compounds in the Atmosphere	377
A. Reaction of Hydroxyl Radical (OH•) with Organic Compounds and Chlorofluorocarbons	377
B. Ozone.....	381
C. Nitrate Radical.....	381
D. Phototransformation	381
V. Key Points.....	384
References.....	386
Chapter 16 Problems	387
Chapter 16 Solutions	388

Chapter 17

Soil Contamination.....	389
I. Introduction.....	389
II. Sources of Soil Contamination.....	389
III. Chemical Nature of Soil Contaminants	391
IV. Important Environmental Properties of Soils.....	392
V. Important Environmental Properties of Soil Contaminants.....	396
VI. Distribution of Soil Contaminants.....	398

A. The Soil/Water Partition Process	400
B. The Soil/Organism Process	402
VII. Ecological and Health Effects of Soil Contamination	404
VIII. Key Points	406
References	407
Chapter 17 Problems	408
Chapter 17 Solutions	410
Chapter 18	
Distribution of Chemicals in the Environment	413
I. Introduction	413
II. Two-Phase Partition Processes in the Environment	413
III. The Fugacity Concept	417
IV. Fugacity and Chemical Distribution	420
V. The Fugacity Capacity Factors (<i>Z</i> Values)	422
VI. Chemical Distribution in a Model Environment	424
A. Example Distribution Calculation	424
VII. Key Points	427
Reference	429
Chapter 18 Problems	430
Chapter 18 Solutions	432
Chapter 19	
Genotoxicity — The Action of Environmental Chemicals on Genetic Material	433
I. Introduction	433
II. The Genetic Code	434
III. Teratogens and Teratogenesis	438
A. Mechanisms of Action	438
B. Examples of Teratogens	440
1. Alcohol (Ethanol)	440
2. Methylmercury	440
3. Rubella (German Measles)	442
4. Thalidomide	442
IV. Mutagens and Mutagenesis	442
A. Types of Mutations	442
1. Point Mutations	443
2. Chromosome Mutations	443
B. Expression of Mutations and DNA Repair	444
V. Carcinogens and Carcinogenesis	446
A. Types of Carcinogens	446
1. Genotoxic Carcinogens	446
2. Epigenetic Carcinogens	447
B. Tumors	449
C. Development Of Cancer	450
D. Problems With Genotoxicity Tests	451
VI. Key Points	452

References.....	453
Chapter 19 Problems	454
Chapter 19 Solutions	456

MANAGEMENT OF HAZARDOUS SUBSTANCES

Chapter 20

Ecotoxicology — The Interaction of Chemicals with Ecosystems.....	459
I. Introduction.....	459
II. The Ecotoxicology Concept.....	459
III. Types of Toxicant Discharged to the Environment.....	460
IV. Laboratory Testing for Environmental Effects.....	461
V. Effects on Ecosystems.....	463
VI. Key Points.....	466
References.....	467
Chapter 20 Problems	468
Chapter 20 Solutions	470

Chapter 21

Risk Assessment.....	471
I. Introduction.....	471
II. The Risk Assessment Process	472
III. Exposure Assessment	474
IV. Example: Adults Exposed to Dieldrin in Soil	477
V. Dose/response Relationships	479
A. Data Available on Dose/Response Relationships	479
B. Safety Factors.....	481
C. Acceptable or Tolerable Daily Intake (or Reference Dose) for Human Populations	482
VI. Risk Characterization	482
VII. Key Points.....	485
References.....	486
Chapter 21 Problems	487
Chapter 21 Solutions	488
Index	489
