

MOLECULAR PHYSICS

Theodore Buyana

Mediterranean College, Athens

World Scientific

Singapore • New Jersey • London • Hong Kong

CONTENTS

Dedication	v
Preface	ix
Acknowledgements	xiii
To the Instructor	xv
1. Getting to Know Molecular Physics	1
1.1. Introduction	1
1.2. Historical Remark	2
1.3. Definitions	4
1.4. Molecular Properties	6
1.5. Molecular Sizes	7
1.6. What is Molecular Physics?	8
1.7. Objective of Molecular Physics	10
1.8. Methods of Molecular Physics	11
1.9. Molecular Parameters	14
1.10. Divisibility of Matter	15
1.11. Binding Energy	17
1.12. Molecular Potential	19
1.13. Interatomic Interaction Forces	24
1.14. Atomic and Molecular Structure	25
1.15. Mutual Interatomic Interaction and Molecular Formation	33

1.16. Bonds and Molecular Structure	37
1.17. Molecular Spectra	51
1.18. Remarks	63
2. Molecular Symmetry	64
2.1. Symmetry in Molecules	64
2.2. Definition of Symmetry	65
2.3. Symmetry Elements	69
2.4. Comments	82
2.5. Combinations of Symmetries	86
2.6. Linear Molecules	91
2.7. Summary	92
3. Quantum Mechanics in Molecular Physics	97
3.1. General	97
3.2. Basic Postulates of Quantum Mechanics	100
3.3. The Schrödinger Equation of a Diatomic Molecule (Two-Body Problem)	102
3.4. Solution of the Schrödinger Equation	109
3.5. Simple Cases	113
3.6. Dependence of the Wavefunctions on r and θ	123
3.7. Angular Momentum of a Molecule	128
3.8. Notation for Angular Momentum	130
3.9. Selection Rules	130
3.10. Absorption and Emission of Electromagnetic Radiation	133
3.11. Spectral Line Width	136
3.12. Energy Width	137
3.13. Electric Character of the Interatomic Forces	138
3.14. Quantum Theory of Interatomic Interaction	141
3.15. Remarks	142
4. Interatomic Interaction	146
4.1. Quantum Theory of Interatomic Interaction	146
4.2. Variational Method	153
4.3. Method of Atomic Orbitals	154
4.4. Method of Molecular Orbitals	155
4.5. Examples	159
4.6. Molecular Stability	166
4.7. Molecular Vibration and Morse Potential	171

4.8.	Effect of a Magnetic Field	172
4.9.	Dunham's Calculations	176
5.	Repulsive Forces	179
5.1.	Classical Repulsive Potential	179
5.2.	Quantum Mechanical Repulsive Potential	180
5.3.	Total Potential	182
5.4.	Comments on the Repulsive Potential	184
6.	Interatomic Molecular Bonds	186
6.1.	Kinds of Bonds	186
6.2.	Bond Structure	188
6.3.	Polyatomic Molecules	189
6.4.	Definition of Bond Multiplicity	196
6.5.	The Hydrogen Bond	198
6.6.	Metallic Bonds	198
6.7.	Van der Waals Bonds	199
6.8.	Covalent Bonds	199
6.9.	Heteropolar Ionic Bonds	199
6.10.	Ionic Bond Energy	200
6.11.	Summary	201
6.12.	The H_2^+ (Hydrogen Molecule Ion) and the H_2 Molecule	202
6.13.	Electrostatic Energy of Ionic Crystals (NaCl)	207
6.14.	Energy Levels of Diatomic Molecules and Level Diagrams	209
6.15.	Aspects of the Theory of Binding (Chemical Bonds)	213
6.16.	Bond Multiplicity	223
6.17.	Details on Polyatomic Molecules	225
7.	Dispersive Forces	236
7.1.	Dipole Moment	236
7.2.	Dispersive Forces	238
7.3.	The Charged Oscillator Model	239
7.4.	Dispersive Potential	242
7.5.	Total Molecular Interaction	243
7.6.	Summary	243
7.7.	Van Der Waals Interaction in H_2	244
8.	The Diatomic Molecule	250
8.1.	The Spectrum	250

8.2.	Electronic Energies	250
8.3.	Vibrational States	251
8.4.	Rotational States	251
8.5.	Vibration-Rotation Spectrum	252
8.6.	Classical Treatment of Vibrations	254
8.7.	The Triatomic Molecule	259
8.8.	The Triatomic Molecule — General Motion	265
8.9.	Rigid Rotor and Reduced Mass	268
8.10.	Molecular Energies	270
8.11.	The Sum-up of the Diatomic Molecule	278
9.	Molecular Spectra	284
9.1.	Formation of Molecular Spectra	284
9.2.	Molecular Potential	287
9.3.	Vibration-Rotation Spectrum	293
9.4.	Transitions	300
9.5.	Selection Rules	306
9.6.	Macroscopic Reasons of Selection Rules in Molecular Spectroscopy	312
9.7.	Remarks	313
9.8.	Summary	313
10.	Pure Rotation Spectrum	314
10.1.	Rotation of a Diatomic Molecule	314
10.2.	Rotation of Linear Polyatomic Molecules	318
10.3.	Rotation of Nonlinear Molecules	320
10.4.	Rotation of Planar Molecules	320
10.5.	Observations	322
11.	Vibration-Rotation Spectrum	323
11.1.	General Theory	323
11.2.	The Most General Case	331
11.3.	Anharmonicity	332
11.4.	Vibration of Polyatomic Molecules	333
11.5.	General Remarks	334
11.6.	The CO ₂ Molecule	335
11.7.	The NH ₃ Molecule	338
11.8.	Thermal Noise	340
11.9.	Dissociation Energy	341

11.10. Conclusions	342
11.11. Quantum States and Coupling Schemes in Molecules	343
11.12. Thermal Expansion of a Molecular Structure	346
11.13. Quantum Mechanical Observations	350
12. Spectra of Polyatomic Molecules	351
12.1. General	351
12.2. Linear Vibrations of Polyatomic Molecules	351
12.3. Rotational Vibrations of Polyatomic Molecules (Microwave Spectra)	358
12.4. Selection Rules	365
12.5. Comments	367
12.6. Fine Structure of the Molecular Spectrum	367
12.7. Thermodynamic Properties	368
12.8. Microwave Spectroscopy	370
12.9. Stark Effect in Molecules	371
13. Molecular Spectroscopy	373
13.1. Introduction	373
13.2. Utility of the Emission and Absorption Spectroscopy	374
13.3. Electronic Spectra	375
13.4. Infrared Spectroscopy	375
13.5. Resolution	376
13.6. Raman Spectroscopy	376
13.7. Selection Rules	381
13.8. The Electromagnetic Spectrum	383
13.9. Experimental Spectroscopy	385
13.10. Philosophical Implications	388
14. Molecular Spectrometry	390
14.1. Kinds of Molecular Spectroscopy (Spectroscopic Methods)	390
14.2. Absorption Spectrometry	391
14.3. Emission Spectrometry	392
14.4. Prism Material	399
14.5. Raman Spectrometry	399
14.6. Resolution	404
14.7. Microwave Spectrometry	405
14.8. Conclusion	409

15. Diffraction Methods	410
15.1. Diffraction Methods	410
15.2. X-ray Diffraction	411
15.3. Electron Diffraction	413
15.4. Neutron Diffraction	418
15.5. X-ray Diffraction vs. Neutron Diffraction	419
15.6. Neutron Sources	420
15.7. Neutron Detectors	422
15.8. Molecular Diffraction	423
15.9. Visual Method in Electron Diffraction	423
15.10. Sector Method	426
15.11. Details on Neutron Diffraction (Scattering) off Crystals	428
15.12. Neutron Scattering by Molecules	434
16. Nuclear Magnetic Resonance	442
16.1. Resonance Methods	442
16.2. Perturbation Theory	442
16.3. NMR Theory	444
16.4. Utility of NMR	455
16.5. Relaxation Times	457
16.6. Bloch Equations	459
16.7. Precession Frequency and Power Absorbed	460
16.8. Nuclear Polarization	462
16.9. Line Width in NMR	464
16.10. Actual Magnetic Moment	468
16.11. Utility of Magnetic Resonance in General	469
16.12. Further Discussion on NMR	470
16.13. NMR Methods	479
17. Experimental NMR Techniques	488
17.1. The NMR Method	488
17.2. Nuclear Induction	492
17.3. The Bridge Method	495
17.4. The Marginal Oscillator Method	496
17.5. Phase Detection System	497
17.6. TAC System	502
17.7. The Pulse Method and the Relaxation Times	504
17.8. Fourier Transform Method	508
17.9. Multispin Systems	509

18. Applications of NMR	511
18.1. General Discussion	511
18.2. Chemical Shift	511
18.3. Knight Shift	519
18.4. Measuring Relaxation Times	522
18.5. Resonance Curves and Line Shape	524
18.6. Second Moments	526
18.7. Other Applications	527
18.8. Some Remarks on the Knight Shift	528
19. Electron Paramagnetic Resonance (Electron Spin Resonance)	532
19.1. The Method of ESR and Its Theory	532
19.2. Utility and Observation of ESR	534
19.3. Theory vs. Experiment	535
19.4. Experimental Apparatus	538
19.5. Theoretical Analysis	541
19.6. Applications of ESR	544
19.7. EPR Effects	555
19.8. Minimum Field	555
19.9. Ferromagnetic Resonance	556
19.10. Spin Wave Resonance	559
19.11. Antiferromagnetic Resonance	560
19.12. EPR Research	563
19.13. Energy Units	563
20. Electron-Nuclear Double Resonance	564
20.1. The Method of ENDOR	564
20.2. Observation of ENDOR	566
20.3. Overhauser Effect in ENDOR	568
20.4. Donors in Si and ENDOR	570
21. Nuclear Quadrupole Resonance	572
21.1. Quadrupole Moment	572
21.2. Nuclear Quadrupole Energy Levels	576
21.3. Nuclear Quadrupole Resonance	581
21.4. Examples	583
21.5. Utility of NQR	585
21.6. Further Discussion on NQR	587
21.7. NQR Splittings	592

22. Epilogue	600
Assignment Problems	607
Solved Problems	647
Bibliography	717
Index	741
