

# A Practical Guide to CCD Astronomy

PATRICK MARTINEZ AND ALAIN KLOTZ

*translated by André Demers*

**CAMBRIDGE**  
UNIVERSITY PRESS

# Contents

Foreword xiii

Preface xvii

<b>1</b>	<b>CCD equipment for astronomy</b>	<b>1</b>
1.1	The CCD detector	1
1.1.1	From photography to CCD	1
1.1.2	What does a CCD detector look like?	4
1.1.3	Geometric characteristics	4
	<i>1-D and 2-D arrays</i>	4
	<i>Pixel size</i>	5
	<i>The sensitive surface and dead zone of a pixel</i>	6
	<i>Color CCDs and black and white CCDs</i>	7
	<i>The number of pixels and the size of the array</i>	8
1.1.4	The operation of the CCD	9
	<i>The reading of the CCD</i>	9
	<i>The integration of an image</i>	11
1.1.5	CCD performance	14
	<i>The sensitivity of a CCD</i>	14
	<i>The capacity of a pixel</i>	16
	<i>The linearity of a CCD</i>	18
	<i>Transfer efficiency</i>	19
	<i>The dark current</i>	20
	<i>Electroluminescence</i>	23
	<i>Defective pixels</i>	23
1.2	CCD camera electronics	23
1.2.1	Clock generation	24
	<i>The definition of a clock</i>	24
	<i>Read time and window mode</i>	28
	<i>Binning</i>	28
	<i>TDI mode</i>	31
	<i>Hardware and software sequencers</i>	31
1.2.2	Reading the signal	32
	<i>Analog processing of the video signal</i>	32
	<i>Analog and digital signals</i>	33
	<i>Digitization of the video signal</i>	34

1.2.3	The electronic design of a CCD camera	35
1.3	Thermal and mechanical aspects	38
1.3.1	General points concerning cooling	38
	<i>The need for cooling</i>	38
	<i>The production of cold</i>	39
	<i>The thermal load</i>	39
1.3.2	Cooling with thermoelectric elements	41
	<i>Peltier modules</i>	41
	<i>Peltier module characteristics</i>	41
	<i>The removal of heat</i>	43
	<i>The power supply and temperature regulation of Peltier modules</i>	46
1.3.3	The problem of frost	47
1.3.4	The camera body	49
1.4	The computer environment	49
1.4.1	The computer	49
1.4.2	Software	52
	<i>Acquisition software</i>	52
	<i>Image processing and display software</i>	53
2	CCD camera characteristics and performance	55
2.1	Geometric characteristics	55
2.1.1	The number of pixels	55
2.1.2	The shape and size of pixels	58
2.2	Electronic and thermal characteristics	59
2.2.1	Read-out noise	59
	<i>The origin of read-out noise</i>	59
	<i>The influence of read-out noise</i>	61
2.2.2	The thermal load and noise	62
2.2.3	Sensitivity to interference	64
2.2.4	Levels of digitization	64
2.3	Photometric characteristics	66
2.3.1	The capacity of pixels	66
2.3.2	Sensitivity and detection thresholds	67
2.3.3	Photometric precision	72
	<i>Photon noise</i>	72
	<i>The evaluation of photometric precision</i>	73
2.3.4	The precision and linearity of the converter	74
2.4	CCD quality	75
2.5	Acquisition functions	77

2.5.1	Exposure	77
2.5.2	Automatic mode	78
2.5.3	Read-time	78
2.5.4	Windowing	79
2.5.5	Binning	79
2.5.6	Types of shutter	81
2.5.7	Planetary image acquisition	82
2.5.8	TDI mode	84
2.6	User friendliness	84
2.7	Automatic guiding	86
<b>3</b>	<b>Image production</b>	<b>88</b>
3.1	The camera mounting	88
3.1.1	Choice of optical combinations	88
	<i>The resolution</i>	88
	<i>The field of view</i>	89
3.1.2	Mechanical integration	91
3.1.3	The chromatic aberration of refractors	92
3.1.4	Guiding problems	95
3.1.5	The filter assembly	98
3.1.6	The mounting for TDI mode	101
3.1.7	The first images	102
3.2	Pointing the telescope	102
3.3	Focusing	104
3.4	Photometric correction of images	109
3.5	Dark acquisition	111
3.6	Flat field acquisition	113
3.7	A night of observations	117
<b>4</b>	<b>Display and image analysis functions</b>	<b>119</b>
4.1	The concept of the CCD image	119
4.1.1	The image on the CCD detector	119
4.1.2	The image in memory	120
4.1.3	The screen image	121
4.1.4	The image on disk	122
4.1.5	The screen copy	123
4.2	Display functions	124
4.2.1	Classic display	124
4.2.2	Blink display	128

4.2.3	True color display	129
4.2.4	Isophote display	129
4.2.5	Polarization card display	130
4.2.6	Cross-sectional display	131
4.2.7	Perspective display	132
4.3	Analysis functions	132
4.3.1	Display help	132
4.3.2	Photometric analysis	134
4.3.3	Photocenter calculation	135
5	<b>Image processing functions</b>	137
5.1	Image processing	137
5.2	Preprocessing	137
5.2.1	The bias image	138
5.2.2	Dark subtraction	139
	<i>The classic method</i>	139
	<i>The generic dark method</i>	140
	<i>The dark optimization method</i>	140
	<i>The nonlinearity of darks</i>	142
5.2.3	The flat field division	142
5.2.4	Cosmetic corrections	144
5.2.5	Preprocessing automation	145
5.3	Point to point operations	149
5.3.1	Arithmetical operations	149
5.3.2	Statistical point to point operations	151
5.3.3	Transformations in color space	152
5.3.4	Transformations in polarization space	154
5.4	Geometric transformations	155
5.4.1	Translations, rotations, and mosaics	155
	<i>Translations</i>	155
	<i>Rotations</i>	156
	<i>Mosaics</i>	156
	<i>Permutation</i>	157
5.4.2	Enlargements and reductions	157
5.4.3	Anamorphs	159
5.5	Convolutions	161
5.5.1	Spatial convolutions	162
	<i>High-pass filters</i>	162
	<i>Low-pass filters</i>	164

	<i>The unsharp mask technique</i>	165
	<i>Morphological filters</i>	166
5.5.2	Frequency convolutions	167
	<i>Fourier transformations</i>	168
	<i>Convolutions in Fourier space</i>	171
5.6	Image restoration	172
5.6.1	Direct algorithms	174
5.6.2	The Van Cittert algorithm	175
5.6.3	The Lucy–Richardson algorithm	176
5.6.4	The maximum entropy algorithm	177
5.6.5	Diverse algorithms	179
5.6.6	Application areas for different methods	179
5.7	Modeling	180
5.7.1	Stellar modeling	180
5.7.2	Isophotal modeling	181
5.7.3	Modeling of the sky background	182
5.8	Choosing image processing software	182
<b>6</b>	<b>CCD applications in astronomy</b>	<b>184</b>
6.1	The advantages of the CCD	184
6.1.1	Image quantification and linearity	184
6.1.2	Detectivity	185
6.1.3	Spectral sensitivity	185
6.1.4	Real time work	185
6.1.5	A restriction: the wide field	186
6.2	High resolution work	186
6.2.1	Planetary surfaces	187
	<i>Image acquisition</i>	188
	<i>Basic image processing</i>	190
	<i>Use of data</i>	190
	<i>Filtering of planetary images</i>	194
6.2.2	Double stars	195
	<i>Image acquisition</i>	196
	<i>Data reduction</i>	197
6.2.3	The Sun	201
6.3	Images and detection of faint objects	202
6.3.1	The field of study	202
6.3.2	Image acquisition	202
6.3.3	Multiple exposures and tracking comets	204
6.3.4	Image processing and analysis	205

6.4	Photometry	207
6.4.1	Areas of application	207
6.4.2	Stellar photometry	210
	<i>The use of filters</i>	210
	<i>The magnitude constant</i>	212
	<i>Absolute magnitude calibration</i>	213
	<i>The use of AAVSO and AFOEV maps</i>	218
6.4.3	Photometry of extended objects	219
	<i>Integral photometry – comets</i>	219
	<i>Surface photometry – galaxies</i>	220
6.4.4	Rapid photometry	221
6.5	Astrometry	222
6.5.1	Areas of application	222
6.5.2	Image acquisition and analysis	222
6.5.3	Alleviating the field problem	223
6.6	Spectrography	224
6.6.1	Areas of application	224
6.6.2	Wavelength calibration	226
6.6.3	Chromatic calibration	227
6.6.4	Factors limiting performance	228
6.6.5	Analysis software	229
6.6.6	Example application	230
6.7	Sky surveillance	230
6.7.1	The area of study	230
6.7.2	Limited zone searches	231
	<i>Supernova searches</i>	231
	<i>The rediscovery of periodic comets</i>	232
6.7.3	Extended zone searches	235
6.7.4	A particular case – TDI mode	236
	Conclusion	238
	Bibliography	239
	Index	241
