Preface	iii
Introduction to Non-Hydrocarbon Geophysical Methods	ix
1. Resistivity Methods	1
1.1 Discussion about Resistivity in Formation Evaluation	1
1.1.1 Terminology	3
1.1.2 Temperature Effects	3
1.1.3 Resistivity Character of Rocks and Fluids	4
1.1.3.1 Salinity Effects	8
1.1.4 Checks	9
1.2 Formation Resistivity Measurements from a Cased Hole	10
1.3 Formation Microscanner Tool (FMT)	11
1.3.1 Uses	13
1.4 The Fullbore Formation Microimager (FMI)	13
1.5 The Array Induction Tool (AIT)	14
1.6 Laboratory Methods	16
1.6.1 Samples	17
1.6.2 Porosity	17
1.6.2.1 Interconnecting Porosity	18
1.6.2.2 Isolated Porosity	19
1.6.3 Shale Determinations	20
1.7 Oceanographic Uses	20
1.7.1 Water Body	20
1.7.2 Fluid Testers	21
1.7.3 Laboratory Measurements	22
2. Photon and Particle Methods	23
2.1 Introduction	23
2.2 Requirements of Gamma Ray Systems	24
2.2.1 Accuracy	25
2.2.2 Sensitivity	26
2.2.3 Resolution	27
2.3 Natural Gamma Radiation	28
2.3.1 Laboratory Methods	28
2.3.1.1 Core Gamma	28
2.3.1.2 Beta Gamma Method	29
2.3.1.3 Closed Can Analysis	30

2.3.2	Estimation of Uranium Amount	30
2.3.3	Small, Portable Radiation Detection Units	33
2.3.4	Detector Types	35
2.3.4.1	Geiger-Müller Detectors	35
2.3.4.2	Proportional Detectors	36
2.3.4.3	Scintillation Detectors	36
2.4	X-ray Methods	37
2.4.1	Borehole Logging Systems	38
2.4.2	X-ray Diffraction Analysis	38
2.4.3	X-ray Crystallographic Analysis	38
2.5	Radon Surveys	39
2.5.1	Alpha Cups	42
2.6	Optical Systems	43
2.6.1	UV Methods	43
2.6.2	Visual Images	45
2.6.2.1	Video Logging	45
2.6.2.2	Remote Sensing	47
3.	Nuclear Methods	49
3.1	Introduction	49
3.2	Radon Surveys	53
3.2.1	Alpha Cups	56
4.	Magnetic and Electromagnetic Methods	59
4.1	Introduction	59
4.2	Magnetic Relationships	59
4.3	Surface Measurements	61
4.3.1	Geophysical Measurements	62
4.3.2	Application	63
4.4	Electromagnetic Systems (EM)	64
4.4.1	Variable Frequency Systems	64
4.4.2	Pulsed Systems	64
4.4.2.1	Principle	64
4.4.2.2	Advantages and Disadvantages of the Pulsed EM Techniques	66
4.4.3	Electromagnetic Propagation	66
4.5	Nuclear Magnetic Methods	68
4.6	Magnetic Susceptibility Logging	68
4.6.1	Magnetic Materials	71
4.6.2	Magnetic Susceptibility of Geologic Materials	72
4.6.3	Field Tests	73
4.6.4	Laboratory Methods	78
4.7	Radar	80

5.	Mechanical Wave, Acoustic Methods	83
5.1	Introduction	83
5.2	Borehole Seismic Methods.....	83
5.2.1	Vertical Seismic Profiling (VSP)	84
5.2.1.1	Well Seismic Tool (WST)	86
5.2.1.2	Seismic Acquisition Tool (SAT).....	86
5.2.1.3	Downhole Seismic Array Tool (DSA).....	86
5.2.1.4	Sources	86
5.2.1.5	Technique	86
5.2.1.6	Check Shots.....	87
5.3	Borehole Televiewer.....	87
5.4	Array Sonic Systems (AIT)	90
5.5	Long-Spacing Acoustic Systems (LSS).....	92
6.	Thermal Methods.....	97
6.1	Introduction	97
6.2	Principles	98
6.3	Borehole Temperature	99
6.3.1	Normal Uses	100
6.3.2	Instruments	102
6.3.3	Temperature Measurement Considerations.....	103
6.3.4	Differential Temperature Measurements.....	105
6.4	Uses of Temperature Measurements — Correction of Solution Resistivities	107
6.5	Thermal Conductivity	108
6.6	Determination of the Formation Temperature.....	109
6.7	Injection of Fluids Into the Formation	113
6.8	Fluid Moving Into and Out of the Borehole.....	115
6.9	Fluid Loss and Communication.....	119
7.	Borehole Calipers.....	123
7.1	Single-Arm Devices	123
7.2	Two-Arm Calipers.....	125
7.3	Three-Arm Calipers	125
7.4	Four- and Six-Arm Calipers	127
7.5	Multi-Arm Calipers	128
7.6	Nonmechanical Methods	128
7.7	Uses of Borehole Calipers	131
8.	Surface/Laboratory Methods	137
8.1	Introduction	137
8.2	Samples.....	138

8.2.1	Porosity	138
8.2.1.1	Interconnecting Porosity	139
8.2.1.2	Isolated Porosity	139
8.3	Shale Determinations	140
8.4	Density	140
8.5	Spectroscopy	141
8.5.1	Emission and Absorption Spectral Analysis	142
8.5.2	Mass Spectrograph	142
8.5.3	Spectral Radiation Analysis	145
8.5.4	Laboratory Activation Analysis	146
8.6	Cores	146
8.6.1	Laboratory Resistivity Measurements	147
8.6.2	Laboratory Acoustic Measurements	148
8.6.3	Laboratory Density Measurements	149
8.7	Coal Parameters	149
9.	Uses and Analysis of Geophysical Methods	151
9.1	Single Measurements	151
9.2	Development of Multiple Curve Measurements	153
9.3	Checks	155
9.3.1	Water Exploration and Evaluation	158
9.3.2	Sand/Shale Sequences	161
9.3.3	Saturation	161
9.4	Salinity Effects	162
9.5	Oceanographic Uses	165
9.5.1	Water Body	165
9.5.2	Laboratory Measurements	166
9.5.3	Fluid Testers	167
9.6	Detection of Massive Discontinuities	168
9.6.1	Acoustic and Seismic Methods	168
9.6.2	Tomography	169
9.7	Mise-à-la-masse	171
9.7.1	Reduction-Oxidation Method	173
9.7.2	Gravity	175
9.7.3	Magnetics	175
9.7.4	Gamma Radiation	176
9.7.5	Surface Resistivity and Induced Polarization (IP)	176
9.8	Engineering	177
9.8.1	Civil Engineering	177
9.8.2	Structural Sites	177
9.8.3	Right-of-Way Engineering	178
9.8.4	Mining	179
9.8.5	Real Estate Evaluation	179
9.8.6	Archeology	180
9.8.7	Waste Disposal	180

9.9	Metallic Mineral Exploration	180
9.9.1	Transport and Deposition Mechanisms	180
9.9.1.1	Oxidation-Reduction Phenomena	180
9.9.2	Relation to Geology/Geophysics	181
9.9.2.1	Geochemical Cells	182
9.9.3	Other Mechanisms	186
9.9.4	Acid-Base Reactions	187
9.9.5	Thermal Changes	187
9.10	Coal	187
9.10.1	Surface Methods	187
9.10.2	Other Geophysical Techniques for Coal Exploration	192
9.11	Analysis	193
9.11.1	Cross Plotting	193
9.11.2	Data Handling and Transmission	194
9.12	Digital Signal Transmission	195
9.13	Presentations	196
9.14	Data Handling and Transmission	196
10.	Transducers and Electrodes	199
10.1	Introduction	199
10.2	Electromagnetic Transducers	200
10.3	Acoustic Transducers	201
10.3.1	Geophones	201
10.3.2	Seismic/Acoustic Sources	202
10.4	Electrodes	204
10.4.1	Half-Cell Electrodes	206
10.4.2	pH Electrodes	206
10.4.3	Specific Ion Electrodes	207
10.4.4	High Frequency Transducers	208
10.5	Radioactivity Detectors	208
10.5.1	Ionization Chambers	208
10.5.2	Geiger-Müller Detectors	208
10.5.3	Proportional Counters	209
10.5.4	Scintillation Detectors	210
10.5.5	Solid-State Detectors	212
10.6	Mechanical Considerations	213
11.	Shielding and Calibration	215
11.1	Shielding	215
11.2	Gamma Radiation	215
11.2.1	Compton Scattering	218
11.2.2	Photoelectric Absorption	219
11.2.3	Pair Production	219
11.2.4	Total Attenuation Coefficient	220
11.2.5	Shield Thickness	220

11.2.6	Collimation	221
11.2.7	Shielding Determinations	222
11.3	Neutron Source Shielding	222
11.3.1	Source Storage	223
11.4	Calibration	224
11.4.1	Resistivity and Conductivity Equipment	226
11.4.2	Acoustic Equipment	228
11.4.2.1	Seismic and VSP	228
11.4.3	Neutron Systems	229
11.4.4	Gamma Ray Systems	231
11.4.5	Density Systems	231

Appendices

A.	Regression Analysis	235
	Mean Values	236
B.	Matrix Algebra	237
C.	Bibliography and References	241
D.	Symbols and Abbreviations, Subscripts, Superscripts	249
E.	Definitions	255
F.	Greek Alphabet	257

Index	259
