

Lars Hörmander

Lectures on  
Nonlinear Hyperbolic  
Differential Equations

Springer

## CONTENTS

<b>Preface</b>	<b>v</b>
<b>Contents</b>	<b>vi</b>
<b>Chapter I. Ordinary differential equations</b>	<b>1</b>
1.1. Introduction	1
1.2. Local existence and uniqueness for the Cauchy problem	1
1.3. Existence of solutions in the large	6
1.4. Generalized solutions	9
<b>Chapter II. Scalar first order equations with one space variable</b>	<b>13</b>
2.1. Introduction	13
2.2. The linear case	13
2.3. Classical solutions of Burgers' equation	15
2.4. Weak solutions of Burgers' equation	17
2.5. General strictly convex conservation laws	28
<b>Chapter III. Scalar first order equations with several variables</b>	<b>36</b>
3.1. Introduction	36
3.2. Parabolic equations	36
3.3. The conservation law with viscosity	41
3.4. The entropy solution of the conservation law	41
<b>Chapter IV. First order systems of conservation laws with one space variable</b>	<b>46</b>
4.1. Introduction	46
4.2. Generalities on first order systems	46
4.3. The lifespan of classical solutions	56
4.4. The Riemann problem	59
4.5. Glimm's existence theorem	63
4.6. Entropy pairs	70
<b>Chapter V. Compensated compactness</b>	<b>72</b>
5.1. Introduction	72
5.2. Weak convergence in $L^\infty$	72
5.3. Weak convergence of solutions of linear differential equations	77
5.4. A scalar conservation law with one space variable	80
5.5. Probability measures associated with a system of two equations	83
5.6. Existence of weak solutions for a system of two equations	87
<b>Chapter VI. Nonlinear perturbations of the wave equation</b>	<b>89</b>
6.1. Introduction	89
6.2. The linear wave equation	91
6.3. The energy integral method	96
6.4. Interpolation and Sobolev inequalities	106
6.5. Global existence theorems for nonlinear wave equations	117

6.6. The null condition in three dimensions	130
6.7. Global existence theorems by the conformal method	141
<b>Chapter VII. Nonlinear perturbations of the Klein-Gordon equation</b>	<b>145</b>
7.1. Introduction	145
7.2. Asymptotic behavior of solutions of the Klein-Gordon equation	145
7.3. $L^2$ , $L^\infty$ estimates for the Klein-Gordon equation	155
7.4. Existence theorems	162
7.5. Remarks on the lowest space dimensions	168
7.6. Alternative energy and Sobolev estimates	171
7.7. Existence theorems for Cauchy data of compact support	174
7.8. The method of Shatah	176
<b>Chapter VIII. Microlocal analysis</b>	<b>186</b>
8.1. Introduction	186
8.2. The wave front set	186
8.3. Microlocal regularity of a product	189
8.4. Pseudo-differential operators	193
8.5. Composite functions	200
8.6. Hölder and Zygmund classes	201
<b>Chapter IX. Pseudo-differential operators of type 1,1</b>	<b>211</b>
9.1. Introduction	211
9.2. Some basic facts on pseudo-differential operators	212
9.3. Continuity in $H_{(\cdot)}$ and in $C^{\ell}$	213
9.4. Adjoints	224
9.5. Composition	226
9.6. Symbols with additional smoothness	227
9.7. The sharp Gårding inequality	233
<b>Chapter X. Paradifferential calculus</b>	<b>235</b>
10.1. Introduction	235
10.2. Regularisation of symbols and paradifferential calculus	235
10.3. Bony's linearisation theorem	240
<b>Chapter XI. Propagation of singularities</b>	<b>246</b>
11.1. Introduction	246
11.2. First order scalar differential equations	246
11.3. Linear pseudo-differential equations	251
11.4. Nonlinear differential equations	255
11.5. Second order hyperbolic equations	257
11.6. Beals' restriction theorem	263
<b>Appendix on pseudo-Riemannian geometry</b>	<b>270</b>
A.1. Basic definitions	270
A.2. Geodesic coordinates and curvature	270
A.3. Conformal changes of metric	275
A.4. A conformal imbedding of Minkowski space	277
