Volume 53

The Convenient Setting of Global Analysis

**Andreas Kriegl
Peter W. Michor**

American Mathematical Society

Table of Contents

Introduction	1
Chapter I	
Calculus of Smooth Mappings	7
1. Smooth Curves	8
2. Completeness	14
3. Smooth Mappings and the Exponential Law	22
4. The c^∞ -Topology	34
5. Uniform Boundedness Principles and Multilinearity	52
6. Some Spaces of Smooth Functions	66
Historical Remarks on Smooth Calculus	73
Chapter II	
Calculus of Holomorphic and Real Analytic Mappings	79
7. Calculus of Holomorphic Mappings	80
8. Spaces of Holomorphic Mappings and Germs	91
9. Real Analytic Curves	97
10. Real Analytic Mappings	101
11. The Real Analytic Exponential Law	105
Historical Remarks on Holomorphic and Real Analytic Calculus	116
Chapter III	
Partitions of Unity	117
12. Differentiability of Finite Order	118
13. Differentiability of Seminorms	127
14. Smooth Bump Functions	152
15. Functions with Globally Bounded Derivatives	159
16. Smooth Partitions of Unity and Smooth Normality	165
Chapter IV	
Smoothly Realcompact Spaces	183
17. Basic Concepts and Topological Realcompactness	184
18. Evaluation Properties of Homomorphisms	188
19. Stability of Smoothly Realcompact Spaces	203
20. Sets on which all Functions are Bounded	217
Chapter V	
Extensions and Liftings of Mappings	219
21. Extension and Lifting Properties	220
22. Whitney's Extension Theorem Revisited	226
23. Frölicher Spaces and Free Convenient Vector Spaces	238
24. Smooth Mappings on Non-Open Domains	247
25. Real Analytic Mappings on Non-Open Domains	254
26. Holomorphic Mappings on Non-Open Domains	261

Chapter VI	
Infinite Dimensional Manifolds	263
27. Differentiable Manifolds	264
28. Tangent Vectors	276
29. Vector Bundles	287
30. Spaces of Sections of Vector Bundles	293
31. Product Preserving Functors on Manifolds	305
Chapter VII	
Calculus on Infinite Dimensional Manifolds	321
32. Vector Fields	321
33. Differential Forms	336
34. De Rham Cohomology	353
35. Derivations on Differential Forms and the Frölicher-Nijenhuis Bracket	358
Chapter VIII	
Infinite Dimensional Differential Geometry	369
36. Lie Groups	369
37. Bundles and Connections	375
38. Regular Lie Groups	404
39. Bundles with Regular Structure Groups	422
40. Rudiments of Lie Theory for Regular Lie Groups	426
Chapter IX	
Manifolds of Mappings	429
41. Jets and Whitney Topologies	431
42. Manifolds of Mappings	439
43. Diffeomorphism Groups	454
44. Principal Bundles with Structure Group a Diffeomorphism Group	474
45. Manifolds of Riemannian Metrics	487
46. The Korteweg – De Vriëß Equation as a Geodesic Equation	498
Complements to Manifolds of Mappings	510
Chapter X	
Further Applications	511
47. Manifolds for Algebraic Topology	512
48. Weak Symplectic Manifolds	522
49. Applications to Representations of Lie Groups	528
50. Applications to Perturbation Theory of Operators	536
51. The Nash-Moser Inverse Function Theorem	553
52. Appendix: Functional Analysis	575
53. Appendix: Projective Resolutions of Identity on Banach spaces	582
References	597
Index	611 æ
