

Julian H. Krolik

**ACTIVE GALACTIC NUCLEI:
FROM THE CENTRAL BLACK HOLE
TO THE GALACTIC ENVIRONMENT**

PRINCETON UNIVERSITY PRESS
Princeton, New Jersey

Contents

Preface	xv
Guide for Readers	xix
1. What Are Active Galactic Nuclei? And Why Does Anyone Care?	3
1.1 What Makes Them Interesting?	3
1.2 What Exactly Are We Talking About? The Most Salient Properties of AGNs	4
1.2.1 Very small angular size	5
1.2.2 High luminosity	7
1.2.3 Broad-band continuum emission	8
1.2.4 Emission lines	11
1.2.5 Variability	13
1.2.6 Polarization	15
1.2.7 Radio emission	17
1.3 AGN Nomenclature	18
2. How to Find AGNs	22
2.1 Optical Color	23
2.2 Optical Emission Lines	26
2.3 Radio Flux	29
2.3.1 The 3C catalog and the confusion limit	29
2.3.2 Optical identifications and the discovery of quasars	31
2.3.3 Subsequent surveys	33
2.4 X-rays	35
2.5 Infrared	36
2.6 γ -rays	37

2.7 Merged Catalogs and Their Flux Limits	38
3. Evolution	42
3.1 Source Counts	42
3.1.1 Formalism	42
3.1.2 AGN source counts in the real world	45
3.1.3 Radio source counts	47
3.1.4 Optical source counts	49
3.1.5 X-ray source counts	50
3.1.6 In which band do the counts go the “deepest”?	51
3.2 The V/V_{\max} Test	52
3.3 Luminosity Function as a Function of Redshift	54
3.4 Parameterizing Evolution	63
3.5 Can One Solve the Population Equation?	66
4. Global Energetics and Black Holes	68
4.1 The Mean Energy Density of AGN Light	68
4.2 Energy Production Efficiency and Remnant Masses	71
4.3 Rees’s Flow Chart	74
4.3.1 Causality bounds	74
4.3.2 Variability timescales	75
4.3.3 The flow chart	76
4.4 Evidence for Massive Black Holes in Galaxies	80
4.4.1 Expected response of stars and interstellar gas to a large nuclear mass	81
4.4.2 Observational tests	86
5. Black Hole Physics	90
5.1 Particle Mechanics in the Vicinity of Black Holes	90
5.1.1 General properties of relativistic particle mechanics	90
5.1.2 Particle motion in a spherically symmetric potential	94
5.1.3 Motion in the Schwarzschild metric	96
5.1.4 Motion in the Kerr metric	103

Contents

5.2 Electromagnetic Fields	111
5.2.1 Introductory comments	111
5.2.2 Surface resistance	112
5.2.3 The rotating black hole battery	113
5.3 Photon Propagation	115
6. Spherical Accretion	120
6.1 Bondi Accretion	121
6.2 The Eddington Limit	125
6.3 Nonadiabatic Accretion	128
6.3.1 Critical point structure	129
6.3.2 Optical depth and photon trapping	130
6.3.3 Thermal instability	131
7. Accretion Disks and the Optical/Ultraviolet Continuum	135
7.1 Fundamental Equations of Thin Disks	135
7.2 What Is the Torque?	138
7.2.1 Viscosity?	138
7.2.2 Magnetized winds?	141
7.2.3 Turbulent Maxwell stresses: the Velikhov-Chandra-sekhar-Balbus-Hawley instability	143
7.3 Time-Steady Disks	147
7.3.1 Radial structure: angular momentum and energy conservation	147
7.3.2 Relativistic effects	150
7.3.3 LTE spectrum	153
7.3.4 Vertical structure	155
7.3.5 Advection-dominated disks	162
7.3.6 Inside the marginally stable orbit	163
7.4 Time-Dependent Disks	164
7.4.1 Characteristic timescales	164
7.4.2 Stability	165

7.5 Emitted Spectrum	169
7.5.1 Opacity mechanisms	169
7.5.2 Thermalization	172
7.5.3 Emergent spectrum from a vertically isothermal disk	173
7.5.4 Emergent spectrum from a disk with vertical temperature gradients	178
7.5.5 Angle dependence	183
7.5.6 Polarization	185
7.6 Observational Tests	188
7.6.1 The big bump and disk model fits	189
7.6.2 Lyman edge features	191
7.6.3 Polarization	192
7.6.4 Variability	193
8. X-ray and γ -ray Emission	196
8.1 Observed Spectra	196
8.1.1 Radio-quiet AGNs	196
8.1.2 Radio-loud lobe-dominated AGNs	198
8.1.3 Radio-loud core-dominated AGNs	200
8.1.4 Observed variability	201
8.2 Radiation Physics: Bremsstrahlung and Inverse Compton Scattering	202
8.2.1 Bremsstrahlung	203
8.2.2 Inverse Compton scattering	206
8.3 Output Spectra from Inverse Compton Scattering	209
8.3.1 Optically thin	210
8.3.2 Optically thick	212
8.4 Electron-Positron Pair Physics	216
8.4.1 Pair production processes and their rates	216
8.4.2 Pair annihilation	220
8.4.3 Peculiarities of pair dynamics	222
8.5 Self-Consistent Equilibria	223
8.5.1 Thermal electrons	224
8.5.2 Nonthermal electrons	232

Contents

8.6 Sources of Energetic Electrons	237
8.6.1 Hot thermal electrons	237
8.6.2 Relativistic electrons	238
8.7 X-ray and γ -ray Propagation	242
8.7.1 The nature of soft X-ray opacity	242
8.7.2 Fe $K\alpha$ emission	245
8.7.3 Consequences of Comptonization and pair production for γ -rays	247
8.7.4 X-ray reflection	248
8.8 Comparison with Observations	250
8.8.1 X-rays	250
8.8.2 γ -rays	253
9. Radio Emission and Jets	256
9.1 Phenomenology	256
9.1.1 Relative strength of radio emission	256
9.1.2 Morphology	258
9.1.3 Spectrum	263
9.1.4 Polarization	266
9.1.5 Variability	266
9.2 Synchrotron Theory	269
9.2.1 Optically thin emission	270
9.2.2 Polarization	272
9.2.3 Estimating the magnetic field strength: the minimum energy argument	273
9.2.4 Optically thick emission	276
9.2.5 Spontaneous and stimulated Compton scattering in optically thick synchrotron sources	282
9.3 Jets	286
9.3.1 Content	288
9.3.2 Acceleration and collimation	289
9.3.3 Propagation and morphology	293
9.3.4 Jet radiation	301

10. Emission Lines	309
10.1 Observables	309
10.1.1 Line lists and relative strengths	309
10.1.2 Line profiles	315
10.1.3 Classification on the basis of emission line properties	317
10.2 Physical Overview	319
10.3 Line Production by Photo-ionization	321
10.3.1 Geometry and internal dynamics	323
10.3.2 Ionization equilibrium	323
10.3.3 Thermal equilibrium	329
10.3.4 Radiation transfer	335
10.3.5 Excited state population equilibrium, recombination cascade, and the approach to thermodynamic equilibrium	343
10.4 Conditions for Achieving Equilibrium	352
10.5 Results of Photo-ionization Calculations	354
10.5.1 The T - Ξ diagram	354
10.5.2 Generic models	357
10.5.3 Model construction	365
10.6 Shocks	383
10.6.1 Internal shock structure	383
10.6.2 Self-generated photo-ionization	387
10.6.3 Emergent spectrum	388
10.7 Line-Emitting Gas Dynamics and Life Cycle	390
11. Intrinsic Absorption and Outflows	399
11.1 Phenomenology	399
11.2 Physical Conditions in the Absorbing Gas	407
11.3 The Magnitude of the Problem	409
11.4 Dynamics	412
11.4.1 Thermally driven winds	412
11.4.2 Magnetically driven winds	414
11.4.3 Radiation pressure driven winds	414

Contents

12. Anisotropic Appearance and Unification of Disparate AGN Varieties	424
12.1 General Principles	424
12.2 Mechanisms Producing Intrinsically Anisotropic Emission	427
12.2.1 Nonspherical relativistic motion	427
12.2.2 Angle-dependent disk emission	428
12.3 Angle-Dependent Obscuration Mechanisms	429
12.4 Mirrors and Screens: or, How to See AGNs from Another Side	432
12.4.1 Polarization	433
12.4.2 Reflection without dilution	437
12.4.3 Emission lines	437
12.4.4 Infrared continuum	439
12.4.5 Spectra versus images	440
12.5 Unification of Flat-Spectrum Compact Radio Sources with Steep-Spectrum Extended Sources	441
12.5.1 Luminosity function of compact radio sources	442
12.5.2 Jet length and speed	446
12.5.3 Depolarization	448
12.6 Unification of Radio-Quiet Broad Line and Narrow Line AGNs via Toroidal Obscuration	449
12.6.1 Mirrors	450
12.6.2 Screens	454
12.6.3 Energy-dependent obscuration	454
12.6.4 Relative numbers of type 1 and type 2 Seyfert galaxies	455
12.6.5 Extrapolation to higher luminosity?	459
12.7 Unification of Radio-Loud Quasars and Radio Galaxies via Toroidal Obscuration	460
12.7.1 Mirrors	460
12.7.2 Screens: infrared reradiation	462
12.7.3 Relative numbers of radio-loud quasars and radio galaxies	463

13. Properties of AGN Host Galaxies	464
13.1 Methodology	464
13.1.1 Imaging the host	464
13.1.2 Sample definition	467
13.2 Host Morphology	469
13.2.1 Sample selection	469
13.2.2 Host morphology and existence of an AGN	470
13.2.3 Host morphology and radio loudness	471
13.2.4 Fine points of host morphology: bars and other disturbances	473
13.3 Host Luminosity	476
13.4 Host Interstellar Medium	479
13.4.1 Signals	480
13.4.2 Surveys	485
13.5 Orientation	486
13.6 Evolutionary State	487
13.7 Environment	489
13.8 Impact of the Nucleus on the Host	492
14. Onset and Fueling	494
14.1 Introduction	494
14.2 The Timescale Problem	495
14.2.1 Creation and growth of the black hole	495
14.2.2 Heavy element abundances	499
14.2.3 Black hole centralization and multiple black holes	499
14.3 Basic Fueling Mechanisms	501
14.3.1 Gravitational forces	502
14.3.2 Hydrodynamic dissipation	505
14.3.3 Magnetic forces	506
14.3.4 Poynting-Robertson drag	507
14.3.5 Stellar-interstellar mass exchange	508
14.3.6 Gas heating and cooling	510
14.4 Triggers and Scenarios	511

Contents

14.4.1 Cooling flows	512
14.4.2 Axisymmetric collapse enhanced by magnetic braking	513
14.4.3 Bar-driven inflow	516
14.4.4 Encounters	524
14.5 Some Open Questions	527
15. Where We Stand	530
15.1 Accomplishments	530
15.2 The Future	531
Appendix A: Basic General Relativity	533
Appendix B: Basic Magnetohydrodynamics	537
Appendix C: Shocks and Other Discontinuities	542
Appendix D: Luminosity Functions and Other Population Statistics	552
D.1 More Sophisticated Estimates of the Luminosity Function	552
D.2 Correlations and Multivariate Probability Distributions	555
Appendix E: The Tensor Virial Theorem	559
Appendix F: Kinematics in an Expanding Universe	566
References	573
Index	589
