

Hildegard Westphal

Carbonate Platform Slopes – A Record of Changing Conditions

The Pliocene of the Bahamas

With 56 Figures and 10 Tables

Springer

Contents

1	Introduction	1
1.1	Geology and Research History of the Bahamas	1
1.1.1	Recent Morphology	1
1.1.2	Origin of the Bahamas	3
1.1.2.1	Basement of the Bahamas	3
1.1.2.2	Origin of the Morphology	5
1.1.3	Ramp versus Steep-Sided: Morphologic Evolution and Sea-Level	7
1.2	Objectives	10
2	Study Area and Material	13
2.1	The Bahamas Drilling Project	13
2.2	Sampling and Material examined	17
3	Methods	19
3.1	Compositional Analysis	19
3.1.1	Point Counting	19
3.1.2	Quantitative Analysis of Foraminiferal Associations	22
3.1.3	Palynologic Examinations	24
3.2	Stable Isotopes	24
3.3	X-ray Diffractometry	25
3.4	Scanning Electron Microscopy	26
3.5	Total Organic Carbon	27
3.6	Fluid Inclusions	28
4	Primary Signals - Sediment Input	29
4.1	Periplatform Carbonates	29
4.2	Results of the Compositional Examinations	31
4.2.1	Components	31
4.2.1.1	Skeletal Components	33
4.2.1.2	Non-Skeletal Components	40
4.2.2	Quantitative Compositional Analysis	42
4.2.2.1	Distribution within Upper Pliocene Interval	42
4.2.2.2	Distribution within Lower Pliocene Interval	43
4.2.3	Numerical Analyses of the Point-Count Results	48
4.2.3.1	Statistics of the Upper Pliocene Composition	48
4.2.3.2	Statistics of the Lower Pliocene Composition	52
4.2.4	Foraminiferal Assemblages	55
4.2.4.1	Distribution of Foraminifers in the Upper Pliocene	55
4.2.4.2	Distribution of Foraminifers in the Lower Pliocene	56
4.2.4.3	Environmental Significance of Foraminiferal Assemblages	59
4.2.5	Microfacies Descriptions	60

4.2.5.1	Upper Pliocene Microfacies	61
4.2.5.2.	Lower Pliocene Microfacies	67
4.3	Discussion - Compositional Signatures in Periplatform Sediments	70
4.3.1.	Sediment Composition, Palynomorphs, and Sea-Level Fluctuations	70
4.3.2	Sedimentation of the Upper Pliocene Succession	72
4.3.3	Sedimentation of the Lower Pliocene Succession	78
4.3.4	Sequence Stratigraphic Implications	84
4.4	Conclusions	85
5	Secondary Signals - Diagenesis	89
5.1	Carbonate Diagenesis	89
5.2	Results	95
5.2.1	Stable Isotopes	95
5.2.2	X-Ray Diffraction	95
5.2.3	Organic Carbon	98
5.2.4	Textural Alterations - SEM and Light-Microscopic Results	99
5.2.4.1	Diagenetic Alterations of the "Groundmass"	99
5.2.4.2	Diagenetic Alterations of Sedimentary Components	104
5.2.5	Description of Ultrafacies	107
5.2.5.1	SEM Observations in Samples with Fine-Grained Matrix	107
5.2.5.2	SEM Observations in Grainstones	111
5.2.6	Fluid Inclusions	112
5.3	Discussion - Diagenesis of Periplatform Carbonates	114
5.3.1	Diagenetic Environment	114
5.3.1.1	Stable Isotopic Signatures	114
5.3.1.2	Stable Isotopes and Ultrafacies	116
5.3.1.3	Significance of Alterations with Respect to the Diagenetic Environment	118
5.3.2	Mineralogic Record	119
5.3.3	Lithification Model	124
5.3.4	Cemented versus Uncemented Layers	130
5.3.4.1	Compaction Assessment in Fine-Grained Carbonates	131
5.3.4.2	Source of the Carbonate Cement	130
5.3.4.3	Causes for Diagenetic Differentiation	141
5.3.5	Origin of Diagenetic Fluids	138
5.4	Conclusions	148
6	Outlook	151
	References	153

Appendices**171**

Appendix 1- Plates (light microscopy and SEM)

Appendix 2 - Palynomorph Assemblages
