Volume 68

Mirror Symmetry and Algebraic Geometry

**David A. Cox
Sheldon Katz**

American Mathematical Society
Providence, Rhode Island

Contents

Preface	xiii
Goal of the Book	xiii
Relation to Physics	xiv
How to Read the Book	xv
Acknowledgements	xvii
Our Hope	xviii
Notation	xix
Chapter 1. Introduction	1
1.1. The Physics of Mirror Symmetry	1
1.2. Three-Point Functions	6
1.3. Why Calabi-Yau Manifolds?	10
1.4. The Mathematics of Mirror Symmetry	10
1.5. What's Next?	12
Chapter 2. The Quintic Threefold	15
2.1. The A-Model Correlation Function of the Quintic Threefold	15
2.2. The Quintic Mirror	17
2.3. The Mirror Map	19
2.4. The B-Model Correlation Function	21
2.5. Putting It All Together	22
2.6. The Mirror Theorems	24
Chapter 3. Toric Geometry	31
3.1. Cones and Fans	31
3.2. Polytopes and Homogeneous Coordinates	33
3.3. Kähler Cones and Symplectic Geometry	38
3.4. The GKZ Decomposition	42
3.5. Fano Varieties and Reflexive Polytopes	46
3.6. Automorphisms of Toric Varieties	47
3.7. Examples	49
Chapter 4. Mirror Symmetry Constructions	53
4.1. The Batyrev Mirror Construction	53
4.2. The Quintic Threefold, Revisited	61
4.3. Toric Complete Intersections	62
4.4. The Voisin-Borcea Construction	65
Chapter 5. Hodge Theory and Yukawa Couplings	73
5.1. Hodge Theory	73

5.2. Maximally Unipotent Monodromy	78
5.3. The Griffiths-Dwork Method	83
5.4. Examples	87
5.5. Hypergeometric Equations	90
5.6. Yukawa Couplings	102
Chapter 6. Moduli Spaces	113
6.1. Complex Moduli	113
6.2. Kähler Moduli	127
6.3. The Mirror Map	148
Chapter 7. Gromov-Witten Invariants	167
7.1. Definition via Algebraic Geometry	168
7.2. Definition via Symplectic Geometry	184
7.3. Properties of Gromov-Witten Classes	191
7.4. Computing Gromov-Witten Invariants, I	196
Chapter 8. Quantum Cohomology	217
8.1. Small Quantum Cohomology	217
8.2. Big Quantum Cohomology	229
8.3. Computing Gromov-Witten Invariants, II	234
8.4. Dubrovin Formalism	239
8.5. The A-Variation of Hodge Structure	242
8.6. The Mirror Conjecture	257
Chapter 9. Localization	275
9.1. The Localization Theorem	275
9.2. Localization in $\bar{M}_{0,n}(\mathbb{P}^r, d)$	282
9.3. Equivariant Gromov-Witten Invariants	298
Chapter 10. Quantum Differential Equations	301
10.1. Gravitational Correlators	301
10.2. The Givental Connection	311
10.3. Relations in Quantum Cohomology	320
Chapter 11. The Mirror Theorem	331
11.1. The Mirror Theorem for the Quintic Threefold	332
11.2. Givental's Approach	356
Chapter 12. Conclusion	397
12.1. Reflections and Open Problems	397
12.2. Other Aspects of Mirror Symmetry	400
Appendix A. Singular Varieties	407
A.1. Canonical and Terminal Singularities	407
A.2. Orbifolds	408
A.3. Differential Forms on Orbifolds	409
A.4. The Tangent Sheaf of an Orbifold	410
A.5. Symplectic Orbifolds	410
Appendix B. Physical Theories	411
B.1. General Field Theories	411

B.2. Nonlinear Sigma Models	419
B.3. Conformal Field Theories	423
B.4. Landau-Ginzburg Models	426
B.5. Gauged Linear Sigma Models	428
B.6. Topological Quantum Field Theories	430
Bibliography	437
Index	453
