Chapter 1

An Introduction to the Vadose Zone

1.1 General.....	3
1.2 History of Investigation.....	4
1.3 Relationship to Saturated Media.....	6
1.4 Contemporary Concerns with the Vadose Zone.....	6
1.5 A Primer on Soils.....	7
1.5.1 Components of Soils.....	7
1.5.2 Soil Classification.....	9
1.5.2.1 Classification of Horizons and Layers.....	10
1.5.2.2 Classification of Color, Structure, and Texture.....	12
1.5.3 The High Points of Clay Mineralogy.....	14
Review Questions.....	18
Problems.....	19

Chapter 2

Physical and Hydraulic Properties of Variably Saturated Media

2.1 Where We Are Going.....	21
2.2 Definitions.....	21
2.3 Hydrostatics in Porous Media.....	29
2.3.1 Surface Tension.....	30
2.3.1.1 Classical Derivation of Laplace's Equation.....	31
2.3.1.2 Introduction to the Thermodynamics of Fluid Interfaces.....	34
2.3.1.2.1 The Thermodynamics of Flat Interfaces.....	34
2.3.1.2.2 Laplace's Equation for a Droplet in Space.....	35
2.3.1.2.3 Vapor Pressure across Curved Interfaces.....	36
2.3.1.2.4 Temperature Dependence of Surface Tension.....	38
2.3.2 The Characteristic Curves.....	38
2.3.2.1 Contact Angle, Sources and Effects.....	44
2.3.2.2 The Independent Domain Model of Hysteresis.....	48
2.4 Hydrodynamics in Porous Media.....	57
2.4.1 Darcy's Law for Saturated Media.....	57
2.4.2 Darcy's Law at Reynolds Number Greater than 1.....	62
2.4.3 Extending Darcy's Law to Unsaturated Media.....	67
2.4.4 Gas Flow in Porous Media.....	69
2.5 Adding the Conservation of Mass: The Richards Equation.....	70
2.6 Expressions for Conductivity and Retention.....	73
2.7 Miller Similarity and Scaling of Capillary Properties.....	75
2.8 Nonaqueous Fluids in the Vadose.....	83
2.8.1 The Anatomy of an NAPL Spill.....	85
2.8.2 Observing LNAPLs in Wells.....	86
2.8.3 Movement and Retention of NAPLs.....	88
2.9 Methods of Media Characterization.....	90

2.9.1	Measurement of Pore Water Potential	90
2.9.2	Measurement of Water Content.....	92
2.9.3	Measurement of Hydraulic Conductivity.....	96
	Review Questions.....	102
	Problems.....	103

Chapter 3

Flow of Water in the Vadose Zone

3.1	The Classic Solutions for Infiltration and Evaporation	111
3.1.1	The Green and Ampt Model	111
3.1.1.1	Determination of Green and Ampt Parameters	116
3.1.2	Solutions Using the Richards Equation	117
3.1.2.1	The Bruce and Klute Equation for Horizontal Infiltration.....	117
3.1.2.2	Steady-State Evaporation from a Water Table.....	122
3.2	Recent Advances.....	126
3.2.1	Solutions for Capillary Barriers.....	126
3.2.2	Preferential Flow Processes.....	139
3.3	Solution Sampling and Flux Measurement.....	141
	Review Questions.....	143
	Problems.....	143

Chapter 4

Vadose Biogeochemical Processes

4.1	Introduction.....	147
4.2	Geochemical Fundamentals.....	149
4.2.1	Kinetics	149
4.2.2	Equilibrium	150
4.2.2.1	Equilibrium between Pure Substances; Standard States	151
4.2.2.2	The Equilibrium Constant.....	153
4.2.3	Activity Conventions	155
4.2.3.1	Henry's Law	156
4.2.4	Temperature and Pressure Dependence of Equilibria.....	157
4.2.5	Mineral Equilibria and Speciation	159
4.2.5.1	Activity Coefficients.....	161
4.2.5.2	Complexes	162
4.2.5.3	Computing Distribution of Species ("Speciation")	163
4.3	Biological Processes	165
4.3.1	Overview.....	165
4.3.2	Vadose Geomicrobiology	166
4.3.3	Vadose Bacterial Activity and CO ₂ Generation	167
4.3.3.1	Laboratory Measurements.....	169
4.3.3.2	Field Measurements	169
4.3.3.3	CO ₂ Production Distributions	170
4.3.4	CO ₂ , Acid, and pH.....	176
4.4	Acid Consumption and Fluid-Rock Interaction	178
4.4.1	Carbonate Minerals and Terranes.....	178
4.4.1.1	The Carbonate System	178
4.4.2	Silicate Minerals and Terranes	181
4.4.2.1	Silicate Weathering.....	182
4.4.2.2	Weathering Progress Concepts.....	185
4.4.2.3	Caliche.....	187

4.4.3	Evaporites and Evaporation.....	188
4.4.3.1	Gypsum.....	189
4.4.3.2	Evaporative Concentration.....	190
4.4.4	Vadose Hydrochemical Evolution.....	191
4.5	Sorptive Processes.....	194
4.5.1	Adsorption.....	194
4.5.2	The Diffuse Double Layer.....	195
4.5.2.1	Diffuse Layer Theory.....	196
4.5.2.2	Ion Exclusion.....	198
4.5.3	Cation Exchange Reactions.....	199
4.5.3.1	Selectivity Coefficient.....	199
4.5.3.2	Exchanger Evolution.....	201
4.5.3.3	Saline Soils.....	202
4.5.4	Sorption Isotherms.....	203
4.5.4.1	Adsorption Models.....	204
4.5.5	Sorption of Organics.....	205
4.5.5.1	Nonequilibrium Sorption.....	208
4.5.6	Retardation.....	208
4.6	Summary: Controls on Vadose Solute Occurrence.....	209
4.7	Reaction Simulations.....	211
4.8	Geochemical Indicators of Vadose Flow Processes.....	212
4.8.1	Mass Balances on Conservative Solutes.....	212
4.8.2	Mass Balances on Evaporating Species.....	218
4.8.3	“Bomb Pulse” Methods.....	220
4.8.4	Mass Balances on Dissolving Solids.....	221
4.8.5	Mass Balances on Exchanging Solids.....	223
	Review Questions.....	224
	Problems.....	225

Chapter 5

Solute Transport in the Vadose Zone

5.1	Flux and Resident Concentration.....	231
5.2	Plug Flow Models.....	232
5.3	Advective–Dispersion Equation.....	234
5.3.1	Scope of Application.....	234
5.3.2	Derivation of the Advective–Dispersion Equation.....	234
5.3.2.1	Solute Mass Conservation Equation.....	234
5.3.2.2	Flux Term, J	236
5.3.2.2.1	Advective Transport.....	236
5.3.2.2.3	Macroscopic Phenomena.....	237
5.3.2.3	Dispersion Coefficients.....	240
5.3.2.4	Chemical Reactions, Solute Decay, and Adsorption.....	242
5.3.2.5	Relationship between Resident and Flux Concentrations for the ADE.....	245
5.3.2.6	Solutions of the ADE.....	246
5.3.2.6.1	Instantaneous Point Injection in One-Dimensional Infinite Column.....	246
5.3.2.6.2	Continuous Point Injection in One Dimension.....	249
5.3.2.6.3	Point Sources in Two and Three Dimensions.....	251
5.4	Sources and Models for Nonideal Transport.....	252

5.4.1	The Various Nonideal Flow Processes.....	252
5.4.2	Retardation Revisited: Incorporating Geochemistry.....	252
5.4.3	The Mobile–Immobile Conceptual Model.....	254
5.5	Transfer Function Modeling.....	254
5.6	Laboratory and Field Methods to Measure Transport Parameters.....	256
	Review Questions.....	257
	Problems.....	258

Chapter 6

Flow and Transport in the Heterogeneous Vadose Zone

6.1	Characterizing Heterogeneity.....	260
6.1.1	A Primer/Review of Probability and Statistics.....	260
6.1.1.1	Univariate Statistical Estimators.....	260
6.1.1.2	Univariate Frequency and Probability Distributions.....	262
6.1.1.3	Univariate Probability Theory: Probability Density Functions.....	264
6.1.1.4	Properties of Probability Density Functions.....	265
6.1.1.5	Moment Measures of Probability Distributions.....	266
6.1.1.6	Some Common Distributions.....	267
6.1.2	Application of Probability and Statistical Concepts to a Spatially Variable Data Set.....	269
6.1.3	Correlated Spatial Variability: Multivariate Gaussian Geostatistics.....	269
6.1.3.1	Auto- and Cross-Correlation.....	273
6.1.3.2	Spatial Correlation.....	273
6.1.3.3	Analytical Covariance Models.....	276
6.1.3.4	Variograms.....	277
6.1.4	Random Field Estimation: Kriging and Random Field Simulation.....	278
6.1.4.1	Kriging.....	278
6.1.4.2	Random Field Simulation.....	280
6.1.5	Non-Parametric Geostatistics.....	282
6.1.6	Summary on Geostatistical Characterization of Heterogeneous Geologic Deposits.....	283
6.2	Predicting Flow and Transport in Heterogeneous Media.....	283
6.2.1	Deterministic Approach.....	284
6.2.2	Stochastic Flow Approach.....	286
6.2.2.1	Stochastic Effective Flow Modeling.....	286
6.2.2.2	Stochastic Heterogeneous Flow Modeling.....	293
6.2.3	Stochastic Transport Modeling.....	293
6.2.3.1	Stochastic Effective Transport Modeling.....	295
6.2.3.2	Stochastic Heterogeneous Transport Modeling.....	299
6.3	Summary on Approaches to Study Flow and Transport in Heterogeneous Vadose Zones.....	299
	Appendix I: Thermodynamic Fundamentals.....	301
	References.....	311
	Index.....	329
