

Juan J. Morales Ruiz

**Differential Galois
Theory and
Non-Integrability
of Hamiltonian Systems**

**Birkhäuser Verlag
Basel · Boston · Berlin**

Contents

1	Introduction	1
2	Differential Galois Theory	
2.1	Algebraic groups	7
2.2	Classical approach	11
2.3	Meromorphic connections	15
2.4	The Tannakian approach	24
2.5	Stokes multipliers	25
2.6	Coverings and differential Galois groups	28
2.7	Kovacic's algorithm	29
2.8	Examples	33
2.8.1	The hypergeometric equation	33
2.8.2	The Bessel equation	34
2.8.3	The confluent hypergeometric equation	36
2.8.4	The Lamé equation	37
3	Hamiltonian Systems	
3.1	Definitions	44
3.2	Complete integrability	48
3.3	Three non-integrability theorems	52
3.4	Some properties of Poisson algebras	57
4	Non-integrability Theorems	
4.1	Variational equations	66
4.1.1	Singular curves	66
4.1.2	Meromorphic connection associated with the variational equation	70
4.1.3	Reduction to normal variational equations	72
4.1.4	Reduction from the Tannakian point of view	78
4.2	Main results	80
4.3	Examples	90

5	Three Models	
5.1	Homogeneous potentials	97
5.1.1	The model	97
5.1.2	Non-integrability theorem	98
5.1.3	Examples	101
5.2	The Bianchi IX cosmological model	105
5.2.1	The model	105
5.2.2	Non-integrability	107
5.3	Sitnikov's Three-Body Problem	109
5.3.1	The model	109
5.3.2	Non-integrability	110
6	An Application of the Lamé Equation	
6.1	Computation of the potentials	112
6.2	Non-integrability criterion	115
6.3	Examples	123
6.4	The homogeneous Hénon-Heiles potential	126
7	A Connection with Chaotic Dynamics	
7.1	Grotta-Ragazzo interpretation of Lerman's theorem	132
7.2	Differential Galois approach	133
7.3	Example	135
8	Complementary Results and Conjectures	
8.1	Two additional applications	139
8.2	A conjecture about the dynamic	142
8.3	Higher-order variational equations	142
8.3.1	A conjecture	142
8.3.2	An application	146
A	Meromorphic Bundles	149
B	Galois Groups and Finite Coverings	153
C	Connections with Structure Group	157
	Bibliography	159
	Index	167
