Contents

In Memoriam—Paolo Farinella	v
<i>David Vokrouhlický</i>	
List of Contributors	vii
Foreword	xi
<i>Walter Alvarez</i>	
Preface	xiii
Acknowledgments	xv
1. The Origin and Properties of Dust Impacting the Earth	1
<i>Donald E. Brownlee</i>	
Abstract	1
Introduction	2
Origin	2
Accretion and Atmospheric Entry Effects	4
Properties	6
Modification in Sediments	10
References	11
2. Sources and Orbital Evolution of Interplanetary Dust Accreted by Earth . .	13
<i>Stephen J. Kortenkamp, Stanley F. Dermott, Debra Fogle, and Keith Grogan</i>	
Abstract	13
Introduction	14
Sources of Dust in the Zodiacal Cloud	14
Asteroidal Dust Bands	14
Cometary Dust	17
Earth's Circumsolar Resonant Dust Ring	18
Sources of Dust Accreted by Earth	19
Two Populations of Cometary IDPs	21
Long-term Variations	23
Accretion from the Dust Bands	23
Accretion from the Resonant Ring	26
Summary and Discussion	26
References	28

3. Delivery of Material From the Asteroid Belt	31
<i>Paolo Farinella, David Vokrouhlický, and Alessandro Morbidelli</i>	
Abstract	31
Introduction	31
The Classical Scenario	34
Recent Dynamical Discoveries	35
A New Scenario	37
Transport Histories vs. Size	43
Open Problems	45
Acknowledgments	46
References	46
4. The Influx of Comets and their Debris	51
<i>William M. Napier</i>	
Abstract	51
Bombarding the Earth	51
Small Body Populations	52
Asteroids	53
Centaur and the Edgeworth-Kuiper Belt	54
Comets	55
Impact Rates and Sources	56
Dusting	59
Arrival of Comets	60
Meteoroid Loss from Comets	61
Meteoroid Streams	63
The Taurid Complex	64
The Fluctuating Zodiacal Cloud	66
Discussion and Conclusion	70
Acknowledgments	71
References	71
5. Spacecraft Measurements of the Cosmic Dust Flux	75
<i>Herbert A. Zook</i>	
Abstract	75
Introduction	75
Early Meteoroid Penetration Data	76
<i>Gemini</i>	81
<i>Pioneer 8 and 9</i>	82
<i>LDEF</i>	85
<i>Galileo and Ulysses</i>	87
Concluding Remarks	89
Acknowledgments	89
References	90

6. Magnetospheric Effects on the Cosmic Dust Input into the Earth's Atmosphere	93
<i>Antal Juhász and Mihály Horányi</i>	
Abstract	93
Introduction	94
Charging and Dynamics of Dust Particles	94
Electromagnetic Fields Model	95
Plasma Model	96
Dust Potential	97
Cometary Dust (Leonids)	98
Dust from the Moon	98
Interplanetary Micrometeoroids	100
Electrostatic Disruption of Dust Grains	103
Summary	104
Acknowledgments	105
References	105
7. Atmospheric Entry Heating of Interplanetary Dust	107
<i>George J. Flynn</i>	
Abstract	107
Introduction	108
Atmospheric Entry Heating Calculations	108
Distribution of Temperatures on Entry	110
Heating Calculations	110
Heating as an Indicator of Particle Source	112
Sensitivity to Particle Density	113
Entry Heating Modeling	114
Emissivity of Small Particles	115
Computer Simulations of Atmospheric Entry Heating	116
Time-Temperature Heating Profile	118
Atmospheric Density	118
Thermal Inertia	118
Large Particles—Effects of Ablation	119
Aerocapture Into Earth Orbit	121
Survival of Organic Compounds and Low Temperature Minerals	122
Internal Temperature Profile	122
Other Solar System Bodies	123
Interstellar Grains	124
Validity of the Entry Heating Models	124
Summary and Future Work	125
References	126
8. Extraterrestrial Material and Stratospheric Aerosols	129
<i>Daniel M. Murphy</i>	
Abstract	129

History	129
PALMS Observations	132
Budgets of Extraterrestrial Material and Stratospheric Aerosols	135
Implications for the Stratosphere	137
Implications for Deposition of Extraterrestrial Material	138
Research Implications	139
Conclusions	140
Acknowledgments	140
References	140
9. Glacial Cycles and Interplanetary Dust	143
<i>Richard A. Muller</i>	
Abstract	143
Introduction	143
Astronomical Origins of Glacial Cycles	144
Narrow 100 kyr Peak	147
The Orbital Inclination Model	148
The 41 kyr Cycle and Winter Insolation	150
The 41 kyr to 100 kyr “Transition”	152
Prediction and Observation of 100 kyr Cycles in Dust	152
Bispectra	153
Simultaneous Presence—Croll/Milankovitch Revived	153
Mechanisms Linking Dust to Climate	154
Scattering of Sunlight	155
Effect of Dust on Cloud Cover	155
Ozone	156
Other Mechanisms	156
Criticisms of the Accretion Model	157
Summary and Conclusions	158
Acknowledgments	159
References	159
10. Iridium and Osmium as Tracers of Extraterrestrial Matter in Marine Sediments	163
<i>Bernhard Peucker-Ehrenbrink</i>	
Abstract	163
Introduction	164
Fundamentals	164
Sampling Artifacts	166
Fractionation of Ir and Os in the Marine Environment	167
Sources of Ir and Os in Marine Sediments	169
Osmium Isotope Mixing Model	169
Temporal Variations in the ET Matter Flux	172
Latitudinal Variations in the ET Matter Flux	173
Some Application to Earth Science	175

Acknowledgments	176
References	176
11. Extraterrestrial Helium in Seafloor Sediments: Identification, Characteristics, and Accretion Rate over Geologic Time	179
<i>Kenneth A. Farley</i>	
Abstract	179
Introduction	180
Extraterrestrial ^3He in Sediments	180
Quantifying the Extraterrestrial Component	182
Deconvolution	184
Stepped Heating: An Alternative Approach	186
The Extraterrestrial Helium Carrier	188
Composition	188
Size Distribution	189
Implications	190
The Sedimentary ^3He Record	192
Variations in IDP Flux Inferred from the Sedimentary ^3He Record	193
Conclusions	200
Acknowledgments	201
References	201
12. Seeking Unbiased Collections of Modern and Ancient Micrometeorites	205
<i>Susan Taylor and James H. Lever</i>	
Abstract	205
Introduction	205
Collecting Micrometeorites	210
Flux, Size, and Composition Distributions	211
Discussion	215
Future Work	216
Acknowledgments	217
References	217
13. Cosmic Ray Exposure History of Meteorites	221
<i>Rainer Wieler and Thomas Graf</i>	
Abstract	221
Introduction	222
Production of Cosmogenic Nuclides	222
Exposure Age Distributions of Meteorites from Asteroids	225
Ordinary Chondrites and HED Meteorites	227
Carbonaceous Chondrites	230
Iron Meteorites	231
Exposure Ages of Lunar and Martian Meteorites	232
Complex Exposure Histories	233
Summary and Implications for Meteorite Delivery	235

Acknowledgments	238
References	238
14. Terrestrial Ages of Meteorites	241
<i>A. J. Timothy Jull</i>	
Abstract	241
Introduction	241
Qualitative Estimates of Terrestrial Age	243
Production of Radionuclides	243
Techniques Employed	246
Counter Methods	246
AMS Methods	246
Noble-Gas Mass Spectrometry	247
Basic Relations	247
Production Rates	248
Production of ^{14}C	248
Production of ^{36}Cl	250
^{26}Al Measurements	250
^{81}Kr Dating	250
Terrestrial Ages of Meteorites from Different Regions	251
Antarctica	251
Desert Meteorites	255
Weathering of Meteorites from Different Storage Regimes	257
New Methods for Dating	258
^{14}C - ^{10}Be Dating	258
^{36}Cl - ^{41}Ca and ^{36}Cl - ^{10}Be Dating	259
^{59}Ni Dating	259
Dating of Meteorite Craters Using In-Situ-Produced Cosmogenic Radionuclides	259
Transit Times of Martian and Lunar Meteorites	260
Conclusions	260
Acknowledgments	261
References	261
15. Quantification of Meteorite Infall Rates from Accumulations in Deserts, and Meteorite Accumulations on Mars	267
<i>Philip A. Bland</i>	
Abstract	267
Introduction	268
Background	271
Terrestrial Ages	271
Oxidation and Terrestrial Age Data	272
Ordinary Chondrites	273
Reproducibility	274
Hot Desert Meteorite Accumulations	274

Hot Desert $R(t)$ and $R(n)$ Distributions	274
The Model	277
Pairing and Mass Distribution	281
Number Per Unit Area	282
The Flux Estimate	283
Problems and Assumptions	284
The Antarctic Situation	285
Introduction	285
Results and Discussion	286
A Speculative Model	289
The Future	291
Meteorite Accumulations on Mars	291
Introduction	291
The Model	292
Meteorite Flux at Mars Surface	294
Rates of Weathering on the Surface of Mars	295
Discussion	296
Conclusions	298
Acknowledgments	298
References	298
16. The Present-day Flux of Meteorites to the Earth	305
<i>Ian Halliday</i>	
Abstract	305
Introduction	305
Evaluation of the Meteorite Flux	306
Early Estimates	306
Flux Estimates from the MORP Camera Network	306
Flux Estimates from Meteorites Recovered in Deserts	312
Variation of Influx Rate with Time of Day, Season, and Latitude	313
Do Potential Meteorites Travel in Streams?	315
Summary	316
Acknowledgments	317
References	317
17. Fossil Meteorites	319
<i>Birger Schmitz and Mario Tassinari</i>	
Abstract	319
Introduction	319
The Brunflo Meteorite	321
The Österplana Ark 001 Meteorite	322
The Österplana Meteorite Search Program 1992–2000	323
Thirty-five Fossil Meteorites	323
Vertical Meteorite Distribution	324
Chemistry and Mineralogy	326

Early Ordovician Meteorite Flux Estimates	327
The K-T Boundary Meteorite	328
Prospective Studies of Fossil Meteorites	329
Acknowledgments	330
References	330
18. The Sedimentary Record of Impact Events	333
<i>Christian Koeberl</i>	
Abstract	333
Introduction	334
Evidence for Impact in the Sedimentary Record	336
Implications of K-T Boundary Studies	336
Proximal vs. Distal Ejecta	337
Case Studies for Distal Ejecta	339
The K-T Boundary	339
Evidence for Impact at the K-T Boundary	340
Chicxulub—The K-T Source Crater	345
Tektites and Microtektites	347
General Information: Strewn Fields, Definition	347
Geochemistry and Petrography of Tektites	351
Source Rocks of Tektites	353
Source Craters of Tektites	354
Tektite Formation	356
Other Distal Ejecta and Possible Source Craters	357
South African and Australian Archean Spherule Layers	357
Acraman Impact Structure and Ejecta Layer	360
Late Devonian Impact Layer and Alamo Breccia	361
Permian-Triassic Boundary	361
Triassic-Jurassic Boundary	362
Morokweng and the Jurassic-Cretaceous Boundary	362
Manson Impact Structure and Ejecta Layer	363
Late Eocene Impactoclastic Layers	363
Conclusions: Distal Impact Ejecta in the Stratigraphic Record	366
Acknowledgments	367
References	367
19. The Terrestrial Cratering Record	379
<i>Richard A. F. Grieve</i>	
Abstract	379
Introduction	380
General Character of the Record	380
Spatial Distribution	381
Age Distribution	387
Size Distribution	387
Terrestrial Cratering Rate	388

Periodic Impacts	389
Recognition of Terrestrial Impact Structures	390
Morphology	390
Geology of Impact Structures	394
Sub-Solidus Effects	395
Impact Melting	395
Geophysics of Impact Structures	397
Impacts in the Stratigraphic Record	397
Concluding Remarks	398
Acknowledgments	399
References	399
20. The Lunar Record of Recent Impact Cratering	403
<i>Jennifer A. Grier and Alfred S. McEwen</i>	
Abstract	403
Introduction	404
An Increase in the Terrestrial Impactor Flux?	404
Summary of Lunar Stratigraphic Systems	405
Classification of Young Craters	406
Absolute Ages of Recent Lunar Craters	407
Relative Ages of Recent Lunar Craters	411
The <i>Clementine</i> Mission	411
The Optical Maturity (OMAT) Parameter	413
Relative Ages of Large Lunar Craters	413
The Recent Impactor Flux on the Moon	416
Implications for the Recent Infall of Material onto Earth	417
Conclusions	418
References	419
21. Accretion to Earth and Moon ~3.85 Ga	423
<i>Stephen J. Mojzsis and Graham Ryder</i>	
Abstract	423
Introduction	423
Accretion and Earliest Crustal Formation of the Earth and Moon	424
Terrestrial Crust Formation	425
Lunar Crust Formation	426
The Late Heavy Bombardment of the Moon	426
Lunar Highland Relative Stratigraphy	428
Absolute Dating of the Impact Stratigraphic Sequence:	
Constraints from Lunar Samples	431
The Oldest Mare Surfaces and the Age of Orientale (Beginning of the Late Imbrian Epoch)	431
The Age of Imbrium (the Beginning of the Early Imbrian Epoch)	431
The Age of Nectaris (Beginning of the Nectarian Period)	432
Pre-Nectarian Period and Events	432

Significance of the Lunar Cratering Record, 3.9–3.8 Ga	433
The Earliest Known Sedimentary Rocks on Earth ~3.85 Ga	434
Controversy Over Age Relationships of the Oldest Sediments	435
Search for Evidence of Ancient Impacts in the Oldest Rocks	436
Siderophile Elements on Early Earth	436
Terrestrial Sources of Iridium in Marine Sediments	436
Search for Enhanced Extraterrestrial Influx of Siderophile Elements	437
Perspectives on Accretion to the Earth and Moon ~3.85 Ga	439
Acknowledgments	441
References	441
22. Solar System Impact Rates Measured from Lunar Spherule Ages	447
<i>Richard A. Muller, Timothy A. Becker, Timothy S. Culler, and Paul R. Renne</i>	
Abstract	447
References	452
List of Reviewers	453
Index	455
