

THE PHYSICS OF
EXTRAGALACTIC RADIO SOURCES

David S. De Young

The University of Chicago Press
Chicago & London

Contents

Preface	xiii
1 INTRODUCTION	1
1.1 Perspective	1
1.2 Preliminaries	2
1.2.1 Definitions	2
1.2.2 Historical Note	3
1.2.3 Names	4
1.2.4 Techniques	5
1.2.5 Some Physical Properties	7
1.3 Morphological Types and Definitions	14
1.3.1 Extended Sources	15
1.3.2 Compact Objects	26
1.3.3 Parent Objects	32
2 OVERVIEW	37
2.1 Introduction	37
2.2 The Grand Questions	37
2.2.1 What Is the Nature of the Central Engine?	37
2.2.2 How Do Jets Form?	39
2.2.3 What Is the Influence of the External Environment?	40
2.2.4 What Is the Role of Nearby Objects?	41
2.2.5 What Are the Effects of Cosmic Evolution?	42
2.3 A Qualitative Picture of a Radio Source: Problems and Processes	43
2.3.1 The Central Engine	43
2.3.2 The Inner Jet Region	49
2.3.3 Large Scale Jets - Basic Processes	52
2.3.4 Radio Sources and the Environment	62
3 SPECIAL PHYSICAL PROCESSES	64
3.1 Introduction	64
3.2 Relativistic Effects	65

	3.2.1	Special Relativistic Phenomena	65
	3.2.2	General Relativistic Effects	78
3.3		Radiative Processes	92
	3.3.1	Synchrotron Radiation	92
	3.3.2	Inverse Compton Radiation	112
	3.3.3	Bremsstrahlung Radiation	116
4		COLLIMATED FLOWS AND SHOCK WAVES	122
	4.1	Introduction	122
	4.2	Basic Processes in Hydrodynamics and MHD	124
	4.2.1	Conceptual Preliminaries	124
	4.2.2	Hydrodynamic Flows	125
	4.2.3	Magnetic Fields and Fluid Flows	151
	4.3	Mixing Layers	158
	4.4	Collimated Outflows and Jets	162
	4.4.1	Overview	162
	4.4.2	Mass, Momentum, and Energy Transport	164
	4.4.3	Relativistic Jets	167
	4.4.4	Some Simple Analytic Relations	170
	4.4.5	Bent Jets	172
	4.4.6	Numerical Simulations	173
5		MICROSCALE PROCESSES	184
	5.1	Introduction	184
	5.2	Particle Acceleration	184
	5.2.1	Fermi Acceleration	187
	5.2.2	Acceleration at Shock Fronts	189
	5.3	Turbulence	194
	5.3.1	Qualitative Overview	194
	5.3.2	Some Properties of Homogeneous Incompressible Turbulence	197
	5.3.3	MHD Turbulence and Turbulent Dynamos	203
	5.4	The Effects of Particle Energy Losses	209
	5.4.1	Preliminaries	209
	5.4.2	Simple Evolution of Synchrotron Spectra	210
	5.4.3	Synchrotron Losses without Sources or Sinks	211
	5.4.4	Evolution of Complex Spectra	212
	5.4.5	Summary of Spectral Evolution	214
6		CLASSICAL DOUBLE AND HIGH LUMINOSITY SOURCES	215
	6.1	Introduction	215
	6.1.1	Overview	215
	6.1.2	An Historical Aside	216

6.2	Detailed Morphology and Dynamical Indicators	220
6.2.1	Overview of Observations	220
6.2.2	Jets	226
6.2.3	Hot Spots	261
6.2.4	Lobes	269
6.3	Associated Optical Properties	282
6.3.1	Host Galaxies	282
6.3.2	Emission Lines	283
6.4	Summary of FR-II Sources	285
6.4.1	Jets	285
6.4.2	Hot Spots	286
6.4.3	Lobes	287
7	THE FR-I RADIO SOURCES	288
7.1	Observational Overview	288
7.1.1	Morphology	288
7.1.2	Polarization Structure	291
7.1.3	Derived Properties	292
7.2	Two Exceptional FR-I Objects: 3C 120 and M87	294
7.2.1	3C 120	295
7.2.2	M87	297
7.3	The Dynamics of FR-I Radio Sources	304
7.3.1	Evidence for Deceleration	304
7.3.2	Specific Models	305
7.3.3	FR-I Dynamics: Summary	308
7.4	Optical Properties	309
7.4.1	Emission Lines	309
7.4.2	Host Galaxies	311
7.5	Comparison of FR-I and FR-II Properties	312
8	COMPACT SOURCES	317
8.1	Truly Compact Sources	318
8.1.1	Observational Properties	319
8.1.2	Models of GPS and CSS Sources	330
8.1.3	The Fate of GPS and CSS Sources	340
8.2	Compact Jets	342
8.2.1	Observational Characteristics	342
8.2.2	Blazar Models	349
8.2.3	Compact Jets: Summary	355
9	UNIFICATION MODELS OF RADIO SOURCES	357
9.1	Introduction	357
9.2	Observational Clues: Evidence for Obscuration	359
9.3	Specific Unification Models	361

9.3.1	FR-II/QSO Unification	362	
9.3.2	FR-I/Blazar Unification	367	
9.3.3	Other Unifications	369	
9.4	Additional Aspects of Unification	370	
9.4.1	Outflow Speeds	370	
9.4.2	Possible Problems Encountered by Unification	371	
9.5	Perspective	374	
10	RADIO GALAXIES AT LARGE REDSHIFTS		376
10.1	Introduction	376	
10.2	Some Cosmological Essentials	377	
10.2.1	Newtonian Cosmology	377	
10.2.2	General Relativistic Cosmologies	382	
10.2.3	Specific Cosmological Models	392	
10.3	High Redshift Radio Sources: Observational Characteristics	397	
10.3.1	Radio Properties	397	
10.3.2	Optical and IR Properties	413	
10.3.3	Host Galaxies	426	
10.4	Evolutionary Paths	431	
10.5	Conclusions	434	
11	RADIO SOURCES IN GALAXY CLUSTERS		436
11.1	Overview of Cluster Properties	436	
11.1.1	Definitions and Global Properties	436	
11.1.2	Dynamics	438	
11.1.3	Populations	440	
11.1.4	The Intracluster Medium	443	
11.2	Radio Source Properties	446	
11.2.1	Morphologies	446	
11.2.2	Statistics	448	
11.2.3	Host Galaxies	450	
11.2.4	Cluster Sources at High Redshift	452	
11.3	Dynamics of Head-Tail Radio Sources	453	
11.3.1	Narrow-Angle Tailed Sources	453	
11.3.2	Wide-Angle Tailed Sources	456	
11.3.3	Narrow-Angle Tails Revisited	459	
11.3.4	Head-Tail Sources in Retrospect	460	
11.4	Radio Galaxies and the Intracluster Medium	461	
11.4.1	Radio Halos in Clusters	461	
11.4.2	Other Implications for the Intracluster Medium	463	
12	THE CENTRAL ENGINE		466
12.1	Introduction	466	

12.1.1 A Cautionary Overview	467
12.2 Black Holes – The Prime Mover	471
12.2.1 Some General Relations	471
12.2.2 Energy Extraction from Black Holes	474
12.3 Accretion Disks – The Fueling Paradigms	486
12.3.1 Thin Disks	487
12.3.2 Problems with Thin Accretion Disks	494
12.3.3 Thick Accretion Disks	497
12.4 Acceleration and Collimation	504
12.4.1 Radiative Acceleration	504
12.4.2 Magnetohydrodynamic Processes	507
12.5 Final Words	514
Appendix	517
References	527
Index	551
