DONAL O'REGAN**

Nova Science Publishers, Inc.
Huntington, New York

CONTENTS

Preface		III
Chapter 1	Functional and functional-differential equations with applications	1
Chapter 2	Multiple nonnegative solutions of nonlinear integral equations	39
Chapter 3	Positive solutions of singular integral equations	66
Chapter 4	Periodic and almost periodic solutions of nonlinear integral equations	110
Chapter 5	Three solutions to integral equations via the Leggett Williams fixed point theorem	155
Chapter 6	Fixed point sets for abstract Volterra operators	161
Chapter 7	Weakly condensing operators and operator equations	205
Chapter 8	Integral equations in Banach spaces	219
Chapter 9	Equations in Banach spaces relative to the weak topology	236
Chapter 10	Existence principles for integral inclusions	246
Chapter 11	Cauchy and periodic integrodifferential inclusions	266

Chapter 12	Positive L^p and continuous solutions for Fredholm integral inclusions	281
Chapter 13	The Petryshyn Leggett Williams fixed point theorem with applications to integral inclusions	302
Chapter 14	Multivalued nonlinear equations on the half line: A fixed point approach	316
Chapter 15	The solution set of integral inclusions on the half line	338
