MESH FREE METHODS

Moving beyond the Finite
Element Method

CRC PRESS

Boca Raton London New York Washington, D.C.

Contents

1	Introduction	1
1.1	Defining Mesh Free Methods	1
1.2	Need for MFree Methods	3
1.3	The Idea of MFree Methods	4
1.4	Outline of the Book	4
2	Mesh Free Methods for Engineering Problems	9
2.1	Physical Phenomena in Engineering	9
2.2	Solution Procedure	9
2.3	Modeling the Geometry	10
2.4	Node Generation	13
2.5	Shape Function Creation	15
2.6	Property of Material or Media	15
2.7	Boundary, Initial, and Loading Conditions	15
2.8	Simulation	16
	2.8.1 Discrete System Equations	16
	2.8.2 Equation Solvers	17
2.9	Visualization	18
2.10	MFree Method Procedure	18
	2.10.1 Basic Steps	19
	2.10.2 Determination of the Dimension of a Support Domain	22
	2.10.3 Determination of the Average Nodal Spacing	22
	2.10.4 Concept of the Influence Domain	23
	2.10.5 Property of MFree Shape Functions	24
2.11	Remarks	25
3	Mechanics of Solids and Structures	27
3.1	Basics	27
3.2	Equations for Three-Dimensional Solids	28
	3.2.1 Stress and Strain	28
	3.2.2 Constitutive Equations	32
	3.2.3 Dynamic Equilibrium Equations	33
3.3	Equations for Two-Dimensional Solids	34
	3.3.1 Stress and Strain	34
	3.3.2 Constitutive Equations	36
	3.3.3 Dynamic Equilibrium Equations	37
3.4	Equations for Truss Members	37
	3.4.1 Stress and Strain	38
	3.4.2 Constitutive Equations	38
	3.4.3 Dynamic Equilibrium Equations	38
3.5	Equations for Beams	38
	3.5.1 Stress and Strain	39
	3.5.2 Constitutive Equations	40
	3.5.3 Moments and Shear Forces	40

3.5.4	Dynamic Equilibrium Equations	42
3.5.5	Equations for Thick Beams.....	42
3.6	Equations for Plates	43
3.6.1	Thin Plates.....	43
3.6.2	Mindlin Plates.....	48
3.6.3	Third-Order Theory of Plates.....	50
3.7	Remarks.....	51
4	Principles for Weak Forms	53
4.1	Strong Forms vs. Weak Forms.....	53
4.2	Hamilton's Principle	54
4.3	Constrained Hamilton's Principle	55
4.3.1	Method of Lagrange Multipliers	56
4.3.2	Penalty Method	56
4.3.3	Determination of Penalty Factor	58
4.4	Galerkin Weak Form	58
4.5	Constrained Galerkin Weak Form	61
4.5.1	Galerkin Weak Form with Lagrange Multipliers	62
4.5.2	Galerkin Weak Form with Penalty Factors.....	62
4.6	Minimum Total Potential Energy Principle	62
4.7	Weighted Residual Method	63
4.8	Weighted Residual Method with Constraints	64
4.9	Points to Note	65
4.10	Remarks.....	65
5	MFree Shape Function Construction	67
5.1	Overview.....	67
5.2	Smoothed Particle Hydrodynamics Approach.....	70
5.2.1	Choice of Weight Function	72
5.2.2	Consistency	74
5.3	Reproducing Kernel Particle Method	77
5.4	Moving Least Squares Approximation	79
5.4.1	MLS Procedure	79
5.4.2	Consistency	84
5.4.3	Continuous Moving Least Square Approximation	86
5.5	Point Interpolation Method	87
5.5.1	Polynomial PIM.....	87
5.5.2	Consistency	90
5.5.3	Properties of PIM Shape Functions.....	91
5.5.4	Difference between PIM Interpolation and MLS Approximation	94
5.5.5	Methods to Avoid Singular Moment Matrix.....	94
5.6	Radial PIM.....	96
5.6.1	Rationale for Radial Basis Functions	96
5.6.2	PIM Formation Using Radial Basis Functions	96
5.6.3	Nonsingular Moment Matrix	98
5.6.4	Consistency	99
5.6.5	Radial Functions with Dimensionless Shape Parameters	99
5.7	Radial PIM with Polynomial Reproduction.....	101
5.7.1	Rationale for Polynomials.....	101

5.7.2	Formulation Using Radial-Polynomial Basis	101
5.7.3	Singularity Issue of the Transformed Moment Matrix	104
	Example 5.1 Sample RPIM Shape Functions	104
	Example 5.2 Effects of Shape Parameters of RBFs on Shape Function.....	107
5.8	Polynomial PIM with Coordinate Transformation	107
5.8.1	Coordinate Transformation	108
5.8.2	Choice of Rotation Angle.....	109
5.9	Matrix Triangularization Algorithm.....	110
5.9.1	MTA Procedure.....	111
5.9.2	Normalization of the Support Domain	112
5.9.3	MTA Flowchart.....	113
5.9.4	Test Examples	113
	Example 5.3 Interpolation Using 6 Nodes in Parallel Lines	113
	Example 5.4 Interpolation Using 12 Nodes in Parallel Lines	115
5.10	Comparison Study via Examples.....	116
	Example 5.5 Comparison of Shape Functions Obtained Using Different Methods (1D Case).....	116
	Example 5.6 Comparison of Shape Functions Obtained Using Different Methods (2D Case).....	118
	Example 5.7 Curve Fitting Using MFree Shape Functions.....	118
	Example 5.8 Effects of Shape Parameters on the Condition Number of Moment Matrices and Curve Fitting.....	125
	Example 5.9 Surface Fitting Using MFree Shape Functions (Effects of Parameters).....	130
	Example 5.10 Surface Fitting Using MFree Shape Functions (Accuracy in Derivatives of the Fitted Surface).....	137
	Example 5.11 Surface Fitting Using MFree Shape Functions (Effects of the Support Domain).....	138
5.11	Compatibility of MFree Function Approximation.....	138
5.12	On the Concept of Reproduction.....	143
5.13	Other Methods	144
5.14	Remarks.....	144
6	Element Free Galerkin Method.....	147
6.1	EFG Formulation with Lagrange Multipliers.....	147
6.1.1	Formulation.....	147
6.1.2	EFG Procedure.....	156
6.1.3	Background Integration	156
6.1.4	Numerical Examples.....	158
	Example 6.1 Patch Test	158
	Example 6.2 Cantilever Beam (Numerical Integration)	161
6.1.5	Remarks	168
6.2	EFG with Penalty Method	169
6.2.1	Formulation.....	169
6.2.2	Penalty Method for Essential Boundary Conditions	170
6.2.3	Penalty Method for Continuity Conditions.....	171
6.2.4	Numerical Examples.....	174
	Example 6.3 Patch Test	174

	Example 6.4	Timoshenko Beam.....	174
	Example 6.5	Cantilever Beam of Bi-Material.....	178
	Example 6.6	Sandwich Composite Beam.....	179
	6.2.5	Remarks.....	181
6.3		Constrained Moving Least Square Method for EFG.....	181
	6.3.1	Formulation.....	182
	6.3.2	Constrained Surfaces Generated by CMLS.....	185
	Example 6.7	Linear Constraint.....	185
	Example 6.8	Parabolic Constraint.....	185
	6.3.3	Weak Form and Discrete Equations.....	188
	6.3.4	Examples for Mechanics Problems.....	189
	Example 6.9	Patch Test.....	189
	Example 6.10	Cantilever Beam.....	190
	Example 6.11	Hole in an Infinite Plate.....	191
	6.3.5	Computational Time.....	195
	6.3.6	Remarks.....	197
6.4		EFG for Nonlinear Elastic Problems.....	198
	6.4.1	Basic Equations for Nonlinear Mechanics Problems.....	198
	6.4.2	Weak Form for Nonlinear Elastic Problems.....	200
	6.4.3	Discretization and Numerical Strategy.....	200
	6.4.4	Numerical Procedure.....	201
	6.4.5	Numerical Example.....	202
	Example 6.12	Soil Foundation.....	202
	6.4.6	Remarks.....	208
6.5		Summary.....	210
7		Meshless Local Petrov–Galerkin Method.....	211
7.1		MLPG Formulation.....	212
	7.1.1	The Idea of MLPG.....	212
	7.1.2	Formulation of MLPG.....	213
	7.1.3	Types of Domains.....	217
	7.1.4	Procedures for Essential Boundary Conditions.....	218
	7.1.5	Numerical Investigation.....	219
	7.1.6	Examples.....	220
	Example 7.1	Patch Test.....	220
	Example 7.2	High-Order Patch Test.....	221
	Example 7.3	Cantilever Beam.....	223
	Example 7.4	Infinite Plate with a Circular Hole.....	226
	Example 7.5	Half-Plane Problem.....	226
7.2		MLPG for Dynamic Problems.....	229
	7.2.1	Statement of the Problem.....	229
	7.2.2	Free-Vibration Analysis.....	230
	7.2.3	Imposition of Essential Boundary Conditions for Free Vibration.....	232
	7.2.4	Numerical Examples.....	233
	Example 7.6	Cantilever Beam.....	233
	Example 7.7	Cantilever Beam with Variable Cross Section.....	236
	Example 7.8	Shear Wall.....	236
	7.2.5	Forced Vibration Analysis.....	237
	7.2.6	Direct Analysis of Forced Vibration.....	239

7.2.7	Numerical Examples.....	240
Example 7.9	Cantilever Beam.....	240
Example 7.9a	Simple Harmonic Loading.....	241
Example 7.9b	Transient Loading.....	244
7.3	Remarks.....	246
8	Point Interpolation Methods.....	249
8.1	Polynomial Point Interpolation Method.....	250
8.1.1	Domain Discretization.....	250
8.1.2	Enclosure of Nodes.....	251
8.1.3	Variational Form of Galerkin PIM.....	253
8.1.4	Comparison of PIM, EFG, and FEM.....	255
8.1.5	Numerical Examples.....	256
Example 8.1	Patch Test.....	256
Example 8.2	Cantilever Beam.....	258
Example 8.3	Hole in an Infinite Plate.....	263
Example 8.4	Bridge Pier.....	264
8.1.6	Remarks.....	265
8.2	Application of PIM to Foundation Consolidation Problem.....	266
8.2.1	Biot's Consolidation Theory and Its Weak Form.....	266
8.2.2	Discretization of Weak Form.....	268
8.2.3	Numerical Examples.....	270
Example 8.5	One-Dimensional Consolidation Problem.....	270
Example 8.6	Two-Dimensional Consolidation Problem.....	274
8.3	Radial Point Interpolation Method.....	276
8.3.1	Key Considerations.....	276
8.3.2	Numerical Examples.....	281
Example 8.7	Patch Test.....	281
Example 8.8	Cantilever Beam.....	282
Example 8.9	Infinite Plate with a Hole.....	292
Example 8.10	Parallel Tunnel.....	297
8.3.3	Remarks.....	299
8.4	Local Point Interpolation Method (LPIM).....	300
8.4.1	LPIM Formulation.....	301
8.4.2	Weight Function.....	302
8.4.3	Numerical Examples.....	303
Example 8.11	Standard Patch Test (LPIM + MTA).....	303
Example 8.12	Higher-Order Patch Test.....	305
Example 8.13	Cantilever Beam.....	306
Example 8.14	Infinite Plate with a Hole.....	311
Example 8.15	Stress Distribution in a Dam.....	312
8.4.4	Remarks.....	313
8.5	Local Radial Point Interpolation Method.....	314
8.5.1	Examples of Static Problems.....	314
Example 8.16	Patch Test.....	315
Example 8.17	High-Order Patch Test.....	315
Example 8.18	Cantilever Beam.....	316
Example 8.19	Infinite Plate with a Circular Hole.....	322
Example 8.20	Half-Plane Problem.....	323

8.5.2	Examples of Dynamic Problems.....	323
	Example 8.21 Cantilever Beam.....	324
	Example 8.22 Free Vibration Analysis of a Shear Wall.....	334
8.5.3	Remarks.....	334
8.6	Application of LRPIM to Diffusion Equations.....	335
	8.6.1 Terzaghi's Consolidation Theory.....	335
	8.6.2 Discretized System Equation in the Time Domain.....	337
	8.6.3 Numerical Example.....	338
	Example 8.23 Two-Dimensional Foundation.....	338
8.7	Comparison Study.....	339
	8.7.1 Convergence Comparison.....	339
	Example 8.24 Cantilever Beam (Convergence of LPIM-MTA, MQ-LRPIM, and MLPG).....	339
	8.7.2 Efficiency Comparison.....	341
	Example 8.25 Cantilever Beam (Efficiency of LPIM-MTA, MQ-LRPIM, and MLPG).....	341
8.8	Summary.....	341
9	Mesh Free Methods for Fluid Dynamics Problems.....	345
9.1	Introduction.....	345
9.2	Smoothed Particle Hydrodynamics Method.....	346
	9.2.1 SPH Basics.....	347
	9.2.2 SPH Formulations for Navier–Stokes Equation.....	348
	9.2.3 Major Numerical Implementation Issues.....	352
	9.2.4 SPH Code Structure.....	359
	9.2.5 Applications.....	359
	Example 9.1 Poiseuille Flow.....	361
	Example 9.2 Couette Flow.....	361
	Example 9.3 Shear-Driven Cavity Problem.....	362
	Example 9.4 Free Surface Flows.....	362
	Example 9.5 Explosion in Vacuum.....	365
	Example 9.6 Simulation of Explosion Mitigated by Water.....	366
	9.2.6 Remarks.....	368
9.3	Local Petrov–Galerkin Method.....	369
	9.3.1 MLPG Formulation.....	369
	9.3.2 Numerical Integration in MLPG.....	370
	9.3.3 Governing Equations and Their Discretized Form.....	376
	9.3.4 Boundary Condition for Vorticity.....	378
	9.3.5 Numerical Results and Discussion.....	379
	Example 9.7 Natural Convection in a Square Cavity Problem.....	379
	9.3.6 Remarks.....	381
9.4	Local Radial Point Interpolation Method.....	382
	9.4.1 LRPIM Formulation.....	383
	9.4.2 Implementation Issue in LRPIM for CFD Problems.....	383
	9.4.3 Numerical Results and Discussion.....	384
	Example 9.8 Natural Convection in a Square Cavity.....	384
	Example 9.9 Natural Convection in a Concentric Annulus.....	386
	9.4.4 Remarks.....	388

10	Mesh Free Methods for Beams	391
10.1	PIM Shape Function for Thin Beams	392
	10.1.1 Formulation	392
	10.1.2 Example	394
	Example 10.1 PIM Shape Functions for Thin Beams	394
10.2	Elastostatic Analysis of Thin Beams	396
	10.2.1 Local Weighted Residual Weak Form	396
	10.2.2 Discretized System Equations	398
	10.2.3 Numerical Example for Static Problems	399
	Example 10.2 Simply-Simply Supported Beams under Various Loads	399
	Example 10.3 Beams under Uniformly Distributed Load with Different Boundary Conditions	401
10.3	Buckling Analysis of Thin Beams (Eigenvalue Problem)	403
	10.3.1 Local Weak Form	403
	10.3.2 Discretized System Equations	403
	10.3.3 Numerical Example	404
	Example 10.4 Bulking Analysis of Thin Beams	404
10.4	Free-Vibration Analysis of Thin Beams (Eigenvalue Problem)	405
	10.4.1 Local Weak Form	405
	10.4.2 Discretized System Equations	405
	10.4.3 Numerical Results	406
	Example 10.5 Free-Vibration Analysis of Thin Beams	406
10.5	Forced Vibration Analysis of Thin Beams (Time-Dependent Problem)	408
	10.5.1 Local Weak Form	408
	10.5.2 Discretized System Equations	409
	10.5.3 Numerical Results	410
	Example 10.6 Vibration of a Pinned-Pinned Thin Uniform Beam Subject to Harmonic Loading	410
	Example 10.7 Vibration of a Pinned-Pinned Thin Uniform Beam Subject to Transient Loading	411
10.6	Timoshenko Beams	413
	10.6.1 Local Weak Form	414
	10.6.2 Discretized System Equations	415
	10.6.3 Numerical Example	416
	Example 10.8 Static Deflection of Timoshenko Beams	416
10.7	Remarks	419
11	Mesh Free Methods for Plates	421
11.1	EFG Method for Thin Plates	421
	11.1.1 Approximation of Deflection	422
	11.1.2 Variational Forms	423
	11.1.3 Discrete Equations	425
	11.1.4 Eigenvalue Problem	429
	11.1.5 Numerical Examples	431
	Example 11.1 Static Deflection of Rectangular Thin Plates	431
	Example 11.2 Natural Frequency Analysis of Thin Square Plates	433
	Example 11.3 Natural Frequency Analysis of Elliptical Plates	435
	Example 11.4 Natural Frequency Analysis of Polygonal Plates	435
	Example 11.5 Natural Frequency Analysis of a Plate of Complex Shape	437

11.2	EFG Method for Thin Composite Laminates	439
11.2.1	Governing Equation for Buckling	440
11.2.2	Discretized Equation for Buckling Analysis.....	442
11.2.3	Discretized Equation for Free-Vibration Analysis	444
11.2.4	Numerical Examples for Buckling Analysis.....	444
Example 11.6	Static Buckling of Rectangular Plates (Validation).....	444
Example 11.7	Static Buckling of a Square Plate (Efficiency)	446
Example 11.8	Static Buckling of a Plate with Complicated Shape (Application)	447
Example 11.9	Static Buckling of a Laminated Plate (Application).....	448
11.2.5	Numerical Examples for Free-Vibration Analysis	449
Example 11.10	Frequency Analysis of Free Vibration of Orthotropic Square Plates	449
Example 11.11	Natural Frequency Analysis of Composite Laminated Plates	451
11.3	EFG Method for Thick Plates	457
11.3.1	Field Variables for Thick Plates	458
11.3.2	Approximation of Field Variables	459
11.3.3	Variational Forms of System Equations	460
11.3.4	Discrete System Equations	461
11.3.5	Discrete Form of Essential Boundary Conditions	462
11.3.6	Equations for Static Deformation Analysis.....	464
11.3.7	Numerical Examples of Static Deflection Analyses	465
Example 11.12	Comparison of Deflection of Thin and Thick Square Plates with Different Types of Boundary Conditions	465
Example 11.13	Convergence of Deflection of a Thin Square Plate	466
Example 11.14	Convergence of Deflection of a Thick Square Plate.....	466
Example 11.15	Maximum Deflections of Thick Plates under Several Kinds of Boundaries	467
Example 11.16	Elimination of Shear Locking	467
11.3.8	Numerical Examples of Vibration Analyses.....	470
Example 11.17	Frequency Analysis of Thick Plates (FSDT)	471
Example 11.18	Frequency Analysis of Thick Plates (FSDT and TSDT).....	471
11.3.9	Numerical Examples of Vibration Analyses.....	472
Example 11.19	Buckling Analysis of Thick Plates (FSDT and TSDT)	472
Example 11.20	Buckling Loads of a Square Plate Based on FSDT and TSDT with Different Loads and Boundaries	472
Example 11.21	Buckling Loads of a Square Plate with a Circular Hole Based on FSDT and TSDT.....	473
11.4	RPIM for Thick Plates.....	475
11.4.1	Formulation.....	475
11.4.2	Numerical Examples.....	475
Example 11.22	Deflection of a Thick Square Plate (Effects of the EXP Shape Parameters)	476
Example 11.23	Deflection of a Thick Square Plate (Effects of the MQ Shape Parameters).....	478
Example 11.24	Deflection of a Thick Square Plate (Effects of Polynomial Terms)	481
Example 11.25	Deflection of a Thick Square Plate (Convergence of Maximum Deflections).....	483

		Example 11.26 Deflection of a Thick Square Plate (Effects of Irregularly Distributed Nodes)	484
		Example 11.27 Deflection of a Thick Square Plate (Effects of Shear Locking)	484
11.5		MLPG for Thin Plates	486
	11.5.1	Governing Equations	486
	11.5.2	Local Weak Form of MLPG	487
	11.5.3	Discretized System Equations	488
	11.5.4	Weight Function	490
	11.5.5	Numerical Integration	490
	11.5.6	Numerical Examples	491
		Example 11.28 Static Analysis of Thin Square Plates	491
		Example 11.29 Square Plate under Different Load with Different Support	494
		Example 11.30 Static Analysis of Thin Rectangular Plates	497
		Example 11.31 Static Deflection Analysis of a Circular Plate	497
		Example 11.32 Free-Vibration Analysis of Thin Plates	498
11.6		Remarks	499
12		Mesh Free Methods for Shells	501
	12.1	EFG Method for Spatial Thin Shells	502
	12.1.1	Moving Least Squares Approximation	502
	12.1.2	Governing Equation for Thin Shell	503
	12.1.3	Strain–Displacement Relations	506
	12.1.4	Principle of Virtual Work	507
	12.1.5	Surface Approximation	508
	12.1.6	Discretized Equations	508
	12.1.7	Static Analysis	509
	12.1.8	Free Vibration	509
	12.1.9	Forced (Transient) Vibration	510
	12.1.10	Numerical Example for Static Problems	511
		Example 12.1 Static Deflection of a Barrel Vault Roof under Gravity Force	511
	12.1.11	Numerical Examples for Free Vibration of Thin Shells	514
		Example 12.2 Free Vibration of a Clamped Cylindrical Shell Panel	514
		Example 12.3 Free Vibration of a Hyperbolic Shell	517
		Example 12.4 Free Vibration of a Cylindrical Shell	517
	12.1.12	Numerical Examples for Forced Vibration of Thin Shells	519
		Example 12.5 Clamped Circular Plate Subject to an Impulsive Load	519
		Example 12.6 Clamped Cylindrical Shell Subject to a Sine Load	519
		Example 12.7 Clamped Spherical Shell Subject to a Sine Curve Load	521
	12.1.13	Remarks	523
	12.2	EFG Method for Thick Shells	523
	12.2.1	Fundamental Relations	523
	12.2.2	Principle of Virtual Work	524
	12.2.3	Numerical Examples	525
		Example 12.8 Static Deflection of a Barrel Vault Roof under Gravity Force	525

	Example 12.9 Pinched Cylindrical Shell	526
	Example 12.10 Pinched Hemispherical Shell	530
	12.2.4 Remarks	532
12.3	RPIM for Thick Shells	534
	12.3.1 Formulation Procedure	534
	12.3.2 Numerical Examples	534
	Example 12.11 Barrel Vault Roof	534
	Example 12.12 Pinched Cylindrical Shell	541
	Example 12.13 Pinched Hemispherical Shell	541
	12.3.3 Remarks	543
12.4	Summary	544
13	Boundary Mesh Free Methods	545
13.1	BPIM Using Polynomial Basis	546
	13.1.1 Point Interpolation on Curves	546
	13.1.2 Discrete Equations of BPIM	549
	13.1.3 Implementation Issues in BPIM	550
	13.1.4 Numerical Examples	551
	Example 13.1 Cantilever Beam	551
	Example 13.2 Plate with a Hole	553
	Example 13.3 A Rigid Flat Punch on a Semi-Infinite Foundation	554
13.2	BPIM Using Radial Function Basis	557
	13.2.1 Radial Basis Point Interpolation	557
	13.2.2 BRPIM Formulation	558
	13.2.3 Comparison of BPIM, BNM, and BEM	559
	13.2.4 Numerical Examples	560
	Example 13.4 Cantilever Beam	560
	Example 13.5 Plate with a Hole	562
	Example 13.6 Internally Pressurized Hollow Cylinder	563
13.3	Remarks	565
14	Mesh Free Methods Coupled with Other Methods	567
14.1	Coupled EFG/BEM	567
	14.1.1 Basic Equations of Elastostatics	568
	14.1.2 Discrete Equations of EFG	568
	14.1.3 BE Formulation	569
	14.1.4 Coupling of EFG and BE System Equations	570
	14.1.5 Numerical Results	574
	Example 14.1 Cantilever Beam	574
	Example 14.2 Hole in an Infinite Plate	576
	Example 14.3 A Structure on a Semi-Infinite Soil Foundation	579
14.2	Coupled EFG and Hybrid BEM	580
	14.2.1 EFG Formulation	582
	14.2.2 Hybrid Displacement BE Formulation	583
	14.2.3 Coupling of EFG and HBE	584
	14.2.4 Numerical Results	586
	Example 14.4 Cantilever Beam	587
	Example 14.5 Hole in an Infinite Plate	587
	Example 14.6 Structure on a Semi-Infinite Foundation	588

14.3	Coupled MLPG/FE/BE Methods.....	589
14.3.1	MLPG Formulation.....	590
14.3.2	FE Formulation.....	590
14.3.3	Coupling of MLPG and FE or BE.....	591
14.3.4	Numerical Results.....	593
	Example 14.7 Cantilever Beam.....	593
	Example 14.8 Hole in an Infinite Plate.....	594
	Example 14.9 Internal Pressurized Hollow Cylinder.....	595
	Example 14.10 A Structure on a Semi-Infinite Foundation.....	596
14.4	Remarks.....	599
15	Implementation Issues.....	601
15.1	Definition of the Support Domain or Influence Domain.....	601
15.2	Triangular Mesh and Size of the Influence Domain.....	602
15.3	Node Numbering and Bandwidth of the Stiffness Matrix.....	603
15.4	Bucket Algorithm for Node Searching.....	604
15.5	Relay Model for Domains with Irregular Boundaries.....	605
15.5.1	Problem Statement.....	605
15.5.2	Visibility Method.....	607
15.5.3	Diffraction Method.....	607
15.5.4	Transparency Method.....	609
15.5.5	The Relay Model.....	610
15.6	Adaptive Procedure Based on Background Cells.....	625
15.6.1	Issues of Adaptive Analysis.....	625
15.6.2	Existing Error Estimates.....	628
15.6.3	Cell Energy Error Estimate.....	628
15.6.4	Numerical Examples.....	631
	Example 15.1 Cantilever Beam (Error Estimation).....	631
	Example 15.2 Infinite Plate with a Circular Hole (Error Estimation).....	631
	Example 15.3 A Square Plate Containing a Crack.....	634
15.7	Strategy for Local Adaptive Refinement.....	634
15.7.1	Update of the Density Factor.....	636
15.7.2	Local Delaunay Triangulation Algorithm.....	636
	Example 15.4 Infinite Plate with a Circular Hole (Adaptive Analysis).....	638
	Example 15.5 Square Plate with a Square Hole (Adaptive Analysis).....	638
	Example 15.6 Square Plate with a Crack (Adaptive Analysis).....	638
	Example 15.7 Square Plate with Two Parallel Cracks (Adaptive Analysis).....	638
	Example 15.8 Arbitrary Complex Domain (Adaptive Analysis).....	638
15.8	Remarks.....	644
16	MFree2D®.....	645
16.1	Overview.....	645
16.2	Techniques Used in MFree2D.....	646
16.3	Preprocessing in MFree2D.....	646
16.3.1	Main Windows.....	647
16.3.2	Geometry Creation.....	648

16.3.3	Boundary Conditions and Loads	650
16.3.4	Modify and Delete Boundary Conditions and Loads	654
16.3.5	Node Generation	655
16.3.6	Materials Property Input	656
16.3.7	Miscellaneous.....	661
16.4	Postprocessing in MFree2D	661
16.4.1	Start of MFreePost.....	661
16.4.2	Window of MFreePost.....	661
