Introduction	ix
Model categories and their homotopy categories	ix
Localizing model category structures	xi
Acknowledgments	xv
<b>Part 1. Localization of Model Category Structures</b>	<b>1</b>
Summary of Part 1	3
Chapter 1. Local Spaces and Localization	5
1.1. Definitions of spaces and mapping spaces	5
1.2. Local spaces and localization	8
1.3. Constructing an $f$ -localization functor	16
1.4. Concise description of the $f$ -localization	20
1.5. Postnikov approximations	22
1.6. Topological spaces and simplicial sets	24
1.7. A continuous localization functor	29
1.8. Pointed and unpointed localization	31
Chapter 2. The Localization Model Category for Spaces	35
2.1. The Bousfield localization model category structure	35
2.2. Subcomplexes of relative $\overline{\Lambda\{f\}}$ -cell complexes	37
2.3. The Bousfield-Smith cardinality argument	42
Chapter 3. Localization of Model Categories	47
3.1. Left localization and right localization	47
3.2. $\mathcal{C}$ -local objects and $\mathcal{C}$ -local equivalences	51
3.3. Bousfield localization	57
3.4. Bousfield localization and properness	65
3.5. Detecting equivalences	68
Chapter 4. Existence of Left Bousfield Localizations	71
4.1. Existence of left Bousfield localizations	71
4.2. Horns on $S$ and $S$ -local equivalences	73
4.3. A functorial localization	74
4.4. Localization of subcomplexes	76
4.5. The Bousfield-Smith cardinality argument	78
4.6. Proof of the main theorem	81
Chapter 5. Existence of Right Bousfield Localizations	83
5.1. Right Bousfield localization: Cellularization	83

5.2.	Horns on $K$ and $K$ -colocal equivalences	85
5.3.	$K$ -colocal cofibrations	87
5.4.	Proof of the main theorem	89
5.5.	$K$ -colocal objects and $K$ -cellular objects	90
<b>Chapter 6. Fiberwise Localization</b>		93
6.1.	Fiberwise localization	93
6.2.	The fiberwise local model category structure	95
6.3.	Localizing the fiber	95
6.4.	Uniqueness of the fiberwise localization	98
<b>Part 2. Homotopy Theory in Model Categories</b>		101
Summary of Part 2		103
<b>Chapter 7. Model Categories</b>		107
7.1.	Model categories	108
7.2.	Lifting and the retract argument	110
7.3.	Homotopy	115
7.4.	Homotopy as an equivalence relation	119
7.5.	The classical homotopy category	122
7.6.	Relative homotopy and fiberwise homotopy	125
7.7.	Weak equivalences	129
7.8.	Homotopy equivalences	130
7.9.	The equivalence relation generated by “weak equivalence”	133
7.10.	Topological spaces and simplicial sets	134
<b>Chapter 8. Fibrant and Cofibrant Approximations</b>		137
8.1.	Fibrant and cofibrant approximations	138
8.2.	Approximations and homotopic maps	144
8.3.	The homotopy category of a model category	147
8.4.	Derived functors	151
8.5.	Quillen functors and total derived functors	153
<b>Chapter 9. Simplicial Model Categories</b>		159
9.1.	Simplicial model categories	159
9.2.	Colimits and limits	163
9.3.	Weak equivalences of function complexes	164
9.4.	Homotopy lifting	167
9.5.	Simplicial homotopy	170
9.6.	Uniqueness of lifts	175
9.7.	Detecting weak equivalences	177
9.8.	Simplicial functors	179
<b>Chapter 10. Ordinals, Cardinals, and Transfinite Composition</b>		185
10.1.	Ordinals and cardinals	186
10.2.	Transfinite composition	188
10.3.	Transfinite composition and lifting in model categories	193
10.4.	Small objects	194
10.5.	The small object argument	196

10.6.	Subcomplexes of relative $I$ -cell complexes	201
10.7.	Cell complexes of topological spaces	204
10.8.	Compactness	206
10.9.	Effective monomorphisms	208
Chapter 11.	Cofibrantly Generated Model Categories	209
11.1.	Cofibrantly generated model categories	210
11.2.	Cofibrations in a cofibrantly generated model category	211
11.3.	Recognizing cofibrantly generated model categories	213
11.4.	Compactness	215
11.5.	Free cell complexes	217
11.6.	Diagrams in a cofibrantly generated model category	224
11.7.	Diagrams in a simplicial model category	225
11.8.	Overcategories and undercategories	226
11.9.	Extending diagrams	228
Chapter 12.	Cellular Model Categories	231
12.1.	Cellular model categories	231
12.2.	Subcomplexes in cellular model categories	232
12.3.	Compactness in cellular model categories	234
12.4.	Smallness in cellular model categories	235
12.5.	Bounding the size of cell complexes	236
Chapter 13.	Proper Model Categories	239
13.1.	Properness	239
13.2.	Properness and lifting	243
13.3.	Homotopy pullbacks and homotopy fiber squares	244
13.4.	Homotopy fibers	249
13.5.	Homotopy pushouts and homotopy cofiber squares	250
Chapter 14.	The Classifying Space of a Small Category	253
14.1.	The classifying space of a small category	254
14.2.	Cofinal functors	256
14.3.	Contractible classifying spaces	258
14.4.	Uniqueness of weak equivalences	260
14.5.	Categories of functors	263
14.6.	Cofibrant approximations and fibrant approximations	266
14.7.	Diagrams of undercategories and overcategories	268
14.8.	Free cell complexes of simplicial sets	271
Chapter 15.	The Reedy Model Category Structure	277
15.1.	Reedy categories	278
15.2.	Diagrams indexed by a Reedy category	281
15.3.	The Reedy model category structure	288
15.4.	Quillen functors	294
15.5.	Products of Reedy categories	294
15.6.	Reedy diagrams in a cofibrantly generated model category	296
15.7.	Reedy diagrams in a cellular model category	302
15.8.	Bisimplicial sets	303
15.9.	Cosimplicial simplicial sets	305

15.10. Cofibrant constants and fibrant constants	308
15.11. The realization of a bisimplicial set	312
<b>Chapter 16. Cosimplicial and Simplicial Resolutions</b>	<b>317</b>
16.1. Resolutions	318
16.2. Quillen functors and resolutions	323
16.3. Realizations	324
16.4. Adjointness	326
16.5. Homotopy lifting extension theorems	331
16.6. Frames	337
16.7. Reedy frames	342
<b>Chapter 17. Homotopy Function Complexes</b>	<b>347</b>
17.1. Left homotopy function complexes	349
17.2. Right homotopy function complexes	350
17.3. Two-sided homotopy function complexes	352
17.4. Homotopy function complexes	354
17.5. Functorial homotopy function complexes	357
17.6. Homotopic maps of homotopy function complexes	362
17.7. Homotopy classes of maps	365
17.8. Homotopy orthogonal maps	367
17.9. Sequential colimits	376
<b>Chapter 18. Homotopy Limits in Simplicial Model Categories</b>	<b>379</b>
18.1. Homotopy colimits and homotopy limits	380
18.2. The homotopy limit of a diagram of spaces	383
18.3. Coends and ends	385
18.4. Consequences of adjointness	389
18.5. Homotopy invariance	394
18.6. Simplicial objects and cosimplicial objects	395
18.7. The Bousfield-Kan map	396
18.8. Diagrams of pointed or unpointed spaces	398
18.9. Diagrams of simplicial sets	400
<b>Chapter 19. Homotopy Limits in General Model Categories</b>	<b>405</b>
19.1. Homotopy colimits and homotopy limits	405
19.2. Coends and ends	407
19.3. Consequences of adjointness	411
19.4. Homotopy invariance	414
19.5. Homotopy pullbacks and homotopy pushouts	416
19.6. Homotopy cofinal functors	418
19.7. The Reedy diagram homotopy lifting extension theorem	423
19.8. Realizations and total objects	426
19.9. Reedy cofibrant diagrams and Reedy fibrant diagrams	427
