CONTENTS

Preface	1
I. AUTOMATA AND INFINITE WORDS	5
1. Introduction	5
2. Words and trees	6
3. Rational sets of infinite words	13
4. Automata	16
5. Büchi automata	25
6. Deterministic Büchi automata	31
7. Muller and Rabin automata	35
7.1. Muller automata	35
7.2. Rabin automata	39
7.3. Muller automata with a full table	41
8. Transition automata	43
9. McNaughton's theorem	45
10. Computational complexity issues	60
10.1. From ω -rational expressions to Büchi automata and back	61
10.2. From Muller automata to ω -rational expressions	62
10.3. From Büchi automata to Rabin automata	62
10.4. From Rabin automata to Muller automata	63
10.5. From Rabin automata to Büchi automata	63
10.6. From Streett automata to Büchi automata	64
10.7. Complexity of algorithms on automata	65
11. Exercises	67
11.1. Words and trees	67

11.2. Rational sets	67
11.3. Büchi automata	68
11.4. Deterministic Büchi automata	68
11.5. Muller automata	69
11.6. McNaughton's theorem	71
12. Notes	71
II. AUTOMATA AND SEMIGROUPS	75
1. Introduction	75
2. Ramseyan factorizations and linked pairs	77
2.1. Ramseyan factorizations	77
2.2. Linked pairs	79
2.3. Ultimate classes	82
2.4. Idempotent linked pairs	85
3. Recognition by morphism	86
3.1. Semigroup morphisms	86
3.2. Morphisms of ordered semigroups	88
3.3. Congruence and syntactic order	90
3.4. Residuals	91
4. Semigroups and infinite products	92
4.1. ω -semigroups	92
4.2. Morphisms of ω -semigroups	93
4.3. Free structures	95
5. Wilke Algebras	97
6. Recognition by morphism of ω -semigroups	101
7. The two modes of recognition	105
8. Syntactic congruence	111
9. Back to McNaughton's theorem	117
10. Prophetic automata	122
11. Exercises	128
11.1. Ramseyan factorizations	128
11.2. Recognition by morphism	129
11.3. Wilke algebras	129
11.4. <i>The two modes of recognition</i>	129
11.5. Syntactic congruence	129
11.6. Back to McNaughton's theorem	130
11.7. Prophetic automata	130
12. Notes	130
III. AUTOMATA AND TOPOLOGY	133
1. Introduction	133

2. Topological spaces	134
2.1. Countable sets	134
2.2. General topology	136
2.3. Metric spaces	137
2.4. Polish spaces	140
2.5. Borel sets	141
3. The space of infinite words	144
3.1. The topology of A^ω	144
3.2. Closed sets	146
3.3. Clopen sets	149
3.4. The second level of the Borel hierarchy	150
3.5. Compactness	152
3.6. The Borel hierarchy of A^ω	154
4. The space of finite or infinite words	157
5. Borel automata	164
6. Suslin sets	168
7. The separation theorem	177
8. Exercises	180
8.1. Topological spaces	180
8.2. The space of infinite words	180
8.3. The space of finite or infinite words	181
8.4. Borel automata	184
9. Notes	185

IV. GAMES AND STRATEGIES

187

1. Introduction	187
2. Infinite games	188
3. Borel games	190
3.1. Open games	190
3.2. Π_2 -games	191
3.3. Martin's theorem	192
4. Games on graphs	196
4.1. Simple games	198
4.2. Winning conditions	199
4.3. Parity games	202
4.4. Parity automata	203
4.5. Rational winning strategies	205
5. Wadge games	207
5.1. Wadge lemma	208
5.2. Rational reduction	208
6. Exercises	210

6.1. Borel games	210
6.2. Infinite games	210
6.3. Games on graphs	211
7. Notes	212
V. WAGNER HIERARCHY	215
1. Introduction	215
2. Ordinals	216
3. Classes of sets	219
3.1. Wadge classes	219
3.2. The boolean hierarchy	219
3.3. Separated and biseparated union	221
4. Chains	223
4.1. Chains in automata	223
4.2. Chains in ω -semigroups	224
4.3. Chains in finite ω -semigroups	225
4.4. Equivalence of the definitions of chains	228
4.5. The chain hierarchy	230
5. Superchains	234
5.1. Superchains in automata	235
5.2. Superchains in ω -semigroups	236
5.3. Superchains in finite ω -semigroups	238
5.4. Equivalence of the definitions of superchains	241
5.5. The superchain hierarchy	242
6. The Wagner hierarchy	250
6.1. The derived automaton	250
6.2. The Wagner hierarchy	253
6.3. Biseparated differences	254
6.4. The standard representatives	256
7. Exercises	259
7.1. Classes of sets	259
7.2. Chains	260
7.3. Wagner hierarchy	262
8. Notes	263
VI. VARIETIES	265
1. Introduction	265
2. Varieties of finite or infinite words	267
2.1. Varieties of ω -semigroups	267
2.2. Identities	268
2.3. The varieties theorem	268

3. Varieties and topology	272
4. Weak recognition	277
4.1. Weak recognition by a morphism of ordered semigroups	277
4.2. Recognition versus weak recognition	283
4.3. Properties of the strong expansion	286
5. Extensions of McNaughton's theorem	291
6. Varieties closed under aperiodic extension	295
7. Concatenation hierarchies for infinite words	296
8. Exercises	303
8.1. Varieties of finite or infinite words	303
8.2. Varieties and topology	303
8.3. Weak recognition	304
8.4. Boolean combinations of deterministic sets	304
8.5. Varieties closed under aperiodic extension	305
9. Notes	305

VII. LOCAL PROPERTIES **307**

1. Introduction	307
2. Weak recognition	308
3. Local properties of infinite words	312
3.1. Properties defined by letters	312
3.2. Prefixes and suffixes of infinite words	314
3.3. Factors of infinite words	319
4. Exercises	324
4.1. Local properties of finite words	324
4.2. Factors of infinite words	324
5. Notes	326

VIII. AN EXCURSION INTO LOGIC **327**

1. Introduction	327
2. The formalism of logic	329
2.1. Syntax	329
2.2. Semantics	332
2.3. Logic on words	336
3. Monadic second-order logic on words	340
4. First-order logic of the linear order	346
4.1. First order and star-free sets	346
4.2. Logical hierarchy	348
5. First-order logic of the successor	356
5.1. Fraïssé-Ehrenfeucht Games	356
5.2. Characterization of $F_1(S)$	359

6. Temporal logic	363
6.1. Another characterization of star-free sets	365
6.2. Star-free sets and temporal logic	369
7. Restricted temporal logic	373
8. Exercises	376
8.1. The formalism of logic	376
8.2. Monadic second-order logic on words	376
8.3. First-order logic of the linear order	377
8.4. First-order logic of the successor	377
8.5. Temporal logic	378
9. Notes	378
IX. BI-INFINITE WORDS	381
1. Introduction	381
2. Bi-infinite words	382
3. Determinism	390
4. Morphisms	395
5. Unambiguous automata on bi-infinite words	400
6. Discrimination	406
7. Logic on \mathbb{Z}	409
8. Exercises	410
8.1. Bi-infinite words	410
8.2. Morphisms	411
8.3. Discrimination	411
8.4. Logic on \mathbb{Z}	411
9. Notes	412
X. INFINITE TREES	413
1. Introduction	413
2. Finite and Infinite trees	414
3. Tree automata	417
3.1. Automata on finite trees	417
3.2. Büchi tree automata	419
3.3. Muller tree automata	420
3.4. Rabin basis theorem	424
4. Tree automata and games	425
4.1. Automaton and Pathfinder	426
4.2. Rabin's tree theorem	427
4.3. A second proof of Rabin's basis theorem	428
5. Topology	428
5.1. The topological space of infinite trees	428

5.2. Suslin sets	429
5.3. Recognizable sets	430
6. Monadic second order logic of two successors	430
7. Effective algorithms	432
8. Exercises	433
9. Notes	434
ANNEX A. FINITE SEMIGROUPS	435
1. Monoids, semigroups and semirings	435
1.1. Definitions	435
1.2. Congruences	438
1.3. Structure of finite semigroups	441
2. Green relations	443
3. Transformation semigroups	448
4. Semidirect product and wreath product	451
4.1. Definitions	451
4.2. Basic decomposition results	453
5. The wreath product principle	458
5.1. Sequential functions	458
5.2. Sets recognized by wreath products	460
6. Notes	463
ANNEX B. VARIETIES OF FINITE SEMIGROUPS	465
1. Varieties of algebras	465
1.1. Birkhoff varieties	465
1.2. Varieties of finite semigroups	468
1.3. Profinite algebras	469
2. The variety theorem	475
3. Some examples of varieties	477
4. Star-free sets	481
4.1. Concatenation hierarchies	486
4.2. Varieties closed under marked product	492
5. Local properties of finite words	492
5.1. Prefixes and suffixes of finite words	493
5.2. Factors of finite words	495
6. Notes	498
