Lectures on
Coarse Geometry

John Roe

American Mathematical Society
Providence, Rhode Island

Contents

Preface	vii
Chapter 1. Metric Spaces	1
1.1. Legendre on hyperbolic geometry	1
1.2. Metric spaces and length spaces	3
1.3. The coarse perspective on metric spaces	5
1.4. Groups and leaves	7
1.5. Trees and complexes	11
1.6. Hyperbolic space	13
1.7. Nilpotent examples — Heisenberg group	18
Chapter 2. Coarse Spaces	21
2.1. The abstract notion of coarse structure	21
2.2. Topological coarse structure	26
2.3. The Higson corona	29
2.4. Metrization of coarse structures	33
2.5. Hyperbolization	35
Chapter 3. Growth and amenability	39
3.1. Bounded geometry	39
3.2. Growth	42
3.3. Amenable spaces	44
3.4. Examples of amenable and nonamenable spaces	47
3.5. Amenable groups	51
3.6. Følner's Theorem	55
3.7. Amenability and analysis	58
Chapter 4. Translation Algebras	59
4.1. Translation Algebras	59
4.2. Amenability and the Translation Algebra	60
4.3. Finiteness of Group Algebras	63
4.4. Translation C^* -Algebras	66
4.5. Translation Algebras as Crossed Products	68
Chapter 5. Coarse Algebraic Topology	71
5.1. Coarse cohomology theory	71
5.2. Product structure on coarse theory	76
5.3. Computation of coarse cohomology	78

5.4. Covers, nerves and metrization	80
5.5. Coarse homology theories	82
5.6. The Coarse Baum-Connes conjecture	84
Chapter 6. Coarse Negative Curvature	87
6.1. Curvature conditions	87
6.2. The Rips property and Gromov hyperbolicity	88
6.3. Controlling quasigeodesics	92
6.4. The Gromov boundary of a hyperbolic space	93
6.5. Bolicity	97
Chapter 7. Limits of Metric Spaces	99
7.1. Convergence of metric spaces	99
7.2. The rescaled limit of metric spaces	101
7.3. Groups of polynomial growth	104
7.4. Ultralimits	105
7.5. Asymptotic Cones	107
Chapter 8. Rigidity	111
8.1. What is rigidity?	111
8.2. The quasi-isometry group of hyperbolic space	112
8.3. Proof of Mostow Rigidity	117
8.4. Quasi-Isometric Rigidity For Products of Hyperbolic Spaces	121
Chapter 9. Asymptotic Dimension	129
9.1. The asymptotic dimension of a coarse space	129
9.2. Composition properties of asymptotic dimension	132
9.3. More Examples	136
9.4. Analytic implications of finite asymptotic dimension	139
Chapter 10. Groupoids and coarse geometry	141
10.1. Reminders about topological groupoids	141
10.2. The pair product and the Stone-Čech boundary	143
10.3. The translation groupoid of a coarse space	145
10.4. Translation groupoid and translation algebra	148
Chapter 11. Coarse Embeddability	151
11.1. Coarse embedding	151
11.2. Kernels and embeddings in Hilbert space	153
11.3. Embeddability and Property T	157
11.4. Property T and coarse equivalence	162
11.5. Property A and exactness for group C^* -algebras	165
Bibliography	173
