Contents

<i>Preface</i>	ix
<i>Scope of the Volume, the Review Process, and Acknowledgments</i>	xi
The Global Picture	
1. Global tectonic maps	1
David Sandwell, Don L. Anderson, and Paul Wessel	
2. Global seismic structure maps	11
Jeroen Ritsema	
3. Global hotspot maps	19
Don L. Anderson and Kimberly A. Schramm	
4. Scoring hotspots: The plume and plate paradigms	31
Don L. Anderson	
5. Evaluation of radiometric ages pertaining to rocks hypothesized to have been derived by hotspot activity, in and around the Atlantic, Indian, and Pacific Oceans	55
Ajoy K. Baksi	
6. Ages of seamounts, islands, and plateaus on the Pacific plate	71
Valérie Clouard and Alain Bonneville	
History of the Plume and Plate Hypotheses	
7. The origins and early trajectory of the mantle plume quasi-paradigm	91
William Glen	
8. A brief history of the plume hypothesis and its competitors: Concept and controversy	119
Don L. Anderson and James H. Natland	
Seismology	
9. The robust aspects of global seismic tomography	147
Adam M. Dziewonski	
10. What can seismology say about hotspots?	155
Bruce R. Julian	
11. Shear wave splitting around hotspots: Evidence for upwelling-related mantle flow?	171
Kristoffer T. Walker, Götz H.R. Bokelmann, Simon L. Klemperer, and Andrew Nyblade	
12. The deep mantle thermo-chemical boundary layer: The putative mantle plume source	193
Thorne Lay	

Heat and Temperature

13. *Carbonate-rich melts in the oceanic low-velocity zone and deep mantle* 207
Dean C. Presnall and Gudmundur H. Gudfinnsson
14. *Primary magmas at mid-ocean ridges, “hotspots,” and other intraplate settings: Constraints on mantle potential temperature* 217
David H. Green and Trevor J. Falloon
15. *Komatiites in the plume debate* 249
Stephen W. Parman and Timothy L. Grove
16. *Hotspots: A view from the swells* 257
John E. DeLaughter, Carol A. Stein, and Seth Stein
17. *Sedimentary evidence for moderate mantle temperature anomalies associated with hotspot volcanism* 279
Peter D. Clift
18. *Heatflow and mantle convection in the triaxial Earth* 289
Anne M. Hofmeister and Robert E. Criss

Ocean Island Basalt Geochemistry

19. *The streaky-mantle alternative to mantle plumes and its bearing on bulk-Earth geochemical evolution* 303
Alan D. Smith
20. *Mass flux across the lower–upper mantle boundary: Vigorous, absent, or limited?* 327
Alexei V. Ivanov and Sergei O. Balyshev
21. *Models for noble gases in mantle geochemistry: Some observations and alternatives* 347
Anders Meibom, Norman H. Sleep, Kevin Zahnle, and Don L. Anderson

Continental Melting Anomalies

22. *Repeated, synchronous magmatism within Africa: Timing, magnetic reversals, and global tectonics* 365
D. Ken Bailey and Alan R. Woolley
23. *The Hoggar swell and volcanism: Reactivation of the Precambrian Tuareg shield during Alpine convergence and West African Cenozoic volcanism* 379
Jean-Paul Liégeois, Amel Benhallou, Abla Azzouni-Sekkal, Rachid Yahiaoui, and Bernard Bonin
24. *Giant dikes, rifts, flood basalts, and plate tectonics: A contention of mantle models* 401
J. Gregory McHone, Don L. Anderson, Erin K. Beutel, and Yuri A. Fialko
25. *Compositional variations of Plio-Quaternary magmatism in the circum-Tyrrhenian area: Deep versus shallow mantle processes* 421
Angelo Peccerillo and Michele Lustrino
26. *No plume, no rift magmatism in the West Antarctic Rift* 435
Sergio Rocchi, Pietro Armienti, and Gianfranco Di Vincenzo
27. *Continental magmatism caused by lithospheric delamination* 449
Linda T. Elkins-Tanton
28. *Malani magmatism: An extensional lithospheric tectonic origin* 463
Kamal K. Sharma

29. From Deccan to Réunion: No trace of a mantle plume	477
Hetu C. Sheth	
30. Age-progressive volcanism of the Oregon High Lava Plains: Overview and evaluation of tectonic models	503
Brennan T. Jordan	
31. Thermal models, magma transport, and velocity anomaly estimation beneath southern Kamchatka	517
Vlad Constantin Manea, Marina Manea, Vladimir Kostoglodov, and Granville Sewell	
Oceanic Melting Anomalies	
32. Plate tectonic processes in the South Atlantic Ocean: Do we need deep mantle plumes?	537
J. Derek Fairhead and Marjorie Wilson	
33. Paired basement ridges: Spreading axis migration across mantle heterogeneities?	555
Peter R. Vogt and Woo-Yeol Jung	
34. Stress-induced seamount formation at ridge-transform intersections	581
Erin K. Beutel	
35. Genesis of the Iceland melt anomaly by plate tectonic processes	595
Gillian R. Foulger, James H. Natland, and Don L. Anderson	
36. Fixity of the Iceland “hotspot” on the Mid-Atlantic Ridge: Observational evidence, mechanisms, and implications for Atlantic volcanic margins	627
Erik R. Lundin and Anthony G. Doré	
37. North Atlantic topographic and geoid anomalies: The result of a narrow ocean basin and cratonic roots?	653
Scott D. King	
38. Crustal formation and magma genesis beneath Iceland: Magnetotelluric constraints	665
Axel Björnsson, Hjalmar Eysteinnsson, and Martin Beblo	
39. Fissure control on volcanic action in the Pacific	687
James H. Natland and Edward L. Winterer	
40. Modeling impact volcanism as a possible origin for the Ontong Java Plateau	711
Adrian P. Jones, Kai Wünnemann, and G. David Price	
41. What built Shatsky Rise, a mantle plume or ridge tectonics?	721
William W. Sager	
42. On the shallow origin of hotspots and the westward drift of the lithosphere	735
Carlo Doglioni, David H. Green, and F. Mongelli	
43. An undeformed ophiolite in the Alps: Field and geochemical evidence for a link between volcanism and shallow plate tectonic processes	751
Françoise Chalot-Prat	
Planetary Volcanism	
44. Plumeless Venus preserves an ancient impact-accretionary surface	781
Warren B. Hamilton	
45. Venusian craters, size distribution, and the origin of coronae	815
Claudio Vita-Finzi, Richard J. Howarth, Simon W. Tapper, and Cordula A. Robinson	

**46. Impact craters as indicators of tectonic and volcanic activity in the
Beta-Atla-Themis region, Venus 825**
Audeliz Matias and Donna M. Jurdy

**47. Large topographic rises, coronae, large flow fields, and large volcanoes on Venus:
Evidence for mantle plumes? 841**
Ellen R. Stofan and Suzanne E. Smrekar

Index 863
