

A Qualitative and Quantitative Mathematical Analysis of Chalcopyrite Disease within Sphalerite

Der Fakultät für Mathematik und Informatik
der Universität Leipzig
eingereichte
Habilitationsschrift
zur Erlangung des akademischen Grades
doctor rerum naturalium habilitatus
Dr. rer. nat. habil.

vorgelegt

.. von

Dr. Thomas Blesgen
geboren am 15.12.1966 in Bonn

Die Annahme der Habilitationsschrift haben empfohlen:

1. Prof. Dr. S. Luckhaus
(Fakultät für Mathematik u. Informatik, Universität Leipzig)
2. Prof. Dr. M. Rumpf
(Mathematisches Institut, Universität Duisburg-Essen)
3. Prof. Dr. E. Salje
(Department of Earth-Sciences, University of Cambridge(UK))

Beschluß über die Verleihung des akademischen Grades vom
14.02.2005.

Contents

1	Introduction	1
2	Derivation of the Model	5
2.1	The general mathematical approach	5
2.2	A purely reactive system	8
2.3	The model for chalcopyrite disease	9
2.4	Two further models for simulations relying on data bases of the free energy	14
2.5	Dimensionality analysis	16
2.6	Free energy inequality for the isothermal system	18
2.7	The non-isothermal case	21
2.8	More general forms of the surface energy	23
3	Existence and Uniqueness Results for the derived Models	25
3.1	Preliminaries	26
3.2	The weak formulation of the problem	27
3.3	A semi-implicit time discretisation	28
3.4	Structural Assumptions	28
3.5	Existence of solutions to the time discrete scheme	29
3.6	Uniform estimates	32
3.7	Global existence of solutions for polynomial free energy	35
3.8	Uniqueness of the solution	36
3.9	Logarithmic free energy	39
3.10	Uniform estimates	42
3.11	Higher integrability for the logarithmic free energy	43
3.12	Global existence of solutions for logarithmic free energies	45
3.13	The limit equations	47
3.14	Proof of existence of solutions to Model III	49

4	Computational Methods	53
4.1	General numerical solution technique	54
4.2	A table lookup principle for the free energy	56
4.3	The harmonic free energy approximation	57
4.4	Free energy computation with GULP	60
4.5	Molecular dynamics computations of the free energy	68
4.6	Quantum mechanical computations	69
5	Numerical Simulations	79
5.1	Verification of the algorithms	79
5.1.1	Two simple analytic tests for Model I	79
5.1.2	Analysis of the different parts of the entropy	81
5.2	The dependence of GULP data on atomistic lattice configurations	82
5.3	Numerical results for Model I	84
5.4	Extension of Model I to linear elasticity	86
5.5	Finite element computations with the tabulated free energy	91
5.6	Free energy minimisation for Model III	94
6	Discussion of the Results and Outlook	95
A	Notations	99
B	Mathematical Symbols	102
B.1	Function spaces	102
B.2	Vector- and tensor notations	103
	References	104
