Contents

<i>Preface</i>	vii	<i>6 Tectonics</i>	61
<i>1 Planetary origins</i>	1	Structures	61
Theories of the Solar System	1	Cryotectonics	64
The planets and their satellites	5	Global tectonics	67
Dust, asteroids and comets	9	<i>7 Volcanism</i>	75
<i>2 Orbits and cycles</i>	13	Maria and flood basalts	75
Planetary orbits and insolation	13	Flows	78
Interaction between planetary bodies	16	Edifices and intrusions	81
The variable Sun	18	Outgassing	88
<i>3 Core, mantle, crust</i>	25	<i>8 Impacts and impactors</i>	91
Reading the subsurface	25	Projectiles	92
Core	29	Targets and atmospheres	93
Mantle	33	Crater formation	95
Crust	35	Cratering history	106
Dynamics	35	<i>9 Atmospheres</i>	111
<i>4 Magnetic fields and signatures</i>	39	Composition	111
Magnetospheres	39	Atmospheric structure	115
Variability	42	Circulation	118
Reversals	44	Greenhouses	121
Palaeomagnetism	45	<i>10 Oceans and icecaps</i>	123
Magnetic stratigraphy	49	Oceans	123
<i>5 Topography and gravity</i>	51	Europa's subsurface ocean	125
Shape	52	Icecaps and snow caps	127
Hypsometric curves	53	<i>11 Erosion, deposition, stratigraphy</i>	133
Topography	55	Wind	133
Mapping gravity	56	Running water	137
Isostasy	58	Stratigraphy	140

CONTENTS

<i>12 Planetary biology</i>	145	<i>Glossary</i>	157
Origins	145	<i>Bibliography</i>	163
Extinctions	148	<i>Index</i>	171
Detecting life on other planetary bodies	150		
Terraforming	155
