*University of Notre Dame
Notre Dame, Indiana*

FRONT COVER: The painting on the front cover depicts the Moon low on the horizon over a town in northern New Mexico, with the Moon colored in the way we might see it if our eyes were sensitive to gamma rays instead of just visible light. The scene is a reminder of the Moon's companionship with Earth and suggests a close relationship to the uniquely habitable environment of our home planet. Front cover art by *Jane Maclean*.

TABLE OF CONTENTS

1 New Views of Lunar Geoscience: An Introduction and Overview

Harald Hiesinger, James W. Head III

1. INTRODUCTION	1
1.1. The Moon in the planetary context	1
1.2. Lunar missions of the last decade	2
1.3. Origin and evolution of the Moon	4
1.4. Internal structure of the Moon	5
1.5. Diversity of lunar rocks	7
1.6. Lunar meteorites	12
1.7. The stratigraphic system of the Moon	13
2. GEOLOGIC PROCESSES	17
2.1. Impact processes	17
2.2. Volcanic processes	30
2.3. Tectonic processes	44
3. GEOLOGIC SETTING AND SIGNIFICANCE OF THE APOLLO AND LUNA LANDING SITES	47
3.1. Overview	47
3.2. Apollo 11 (July, 1969)	47
3.3. Apollo 12 (November, 1969)	49
3.4. Apollo 14 (January-February, 1971)	51
3.5. Apollo 15 (July-August, 1971)	54
3.6. Apollo 16 (May, 1972)	56
3.7. Apollo 17 (December, 1972)	58
3.8. Luna 16 (September, 1970)	60
3.9. Luna 20 (February, 1972)	60
3.10. Luna 24 (August, 1976)	61
3.11. Significance of landing sites for the interpretation of global data sets	62
4. SUMMARY AND OUTSTANDING QUESTIONS	65
5. REFERENCES	67

2 Understanding the Lunar Surface and Space-Moon Interactions

Paul Lucey et al.

1. INTRODUCTION	83
2. THE LUNAR REGOLITH	84
2.1. Some properties of lunar regolith and soil	85
3. LUNAR SAMPLES	86
3.1. Apollo rock samples	86
3.2. Lunar meteorites	87
3.3. Lunar regolith and soil samples	87
3.4. The mare-highlands dichotomy and KREEP	89
4. LUNAR MINERALOGY	91

4.1. Silicate minerals	9
4.2. Oxide minerals	9
4.3. Phosphate minerals.....	10
4.4. Iron metal	10
4.5. Importance of the ratio of magnesium to iron	10
5. LUNAR ROCKS	10
5.1. Pristine nonmare rocks	10
5.2. Breccias	10
5.3. Mare volcanics.....	11
6. REGOLITH COMPOSITION	11
6.1. Chemical composition data for regolith samples	11
6.2. Mineral and rock control of regolith composition.....	11
7. FELDSPATHIC LUNAR METEORITES AS REGOLITH	13
7.1. Composition of the feldspathic upper crust.....	13
7.2. Lunar meteorites as ground truth.....	13
7.3. The magnesium to iron ratio of the feldspathic crust	13
8. REGOLITH EVOLUTION: MICROMETEORITES AND ENERGETIC PARTICLE INTERACTIONS	14
8.1. The Moon's micrometeorite and energetic-particle environment	14
8.2. Recent developments in the detection and studies of these interaction products	14
8.3. Implanted solar-wind gases	14
8.4. Solar cosmic rays.....	14
8.5. Products of galactic-cosmic-ray interactions	14
8.6. Exposure records of lunar meteorites.....	14
9. REGOLITH EVOLUTION: MIXING, SPACE WEATHERING, AND MATURITY	14
9.1. Reworking and mixing	14
9.2. Space weathering products	14
9.3. Compositional variation with maturity in path-1 soils	15
9.4. Compositional variation with maturity in path-2 soils	15
9.5. Compositional variation with grain size.....	15
10. REMOTE SENSING OF LUNAR SURFACE COMPOSITION.....	16
10.1. Gamma-ray spectroscopy	16
10.2. Neutron spectroscopy	17
10.3. X-ray spectroscopy	17
10.4. Spectral reflectance remote sensing of lunar surface composition.....	17
10.5. Spectral remote sensing in the thermal IR.....	19
10.6. Remote sensing of lunar thermal properties.....	19
10.7. Radar remote sensing of the regolith.....	19
10.8. Hydrogen and the lunar poles.....	19
11. THE LUNAR ATMOSPHERE	19
11.1. Introduction	19
11.2. Remote sensing of the Moon's atmosphere.....	19
11.3. Lunar atmosphere generated by meteors.....	19
11.4. Sputtering sources	19
11.5. Sources, recycling and sinks.....	20
11.6. Lunar atmosphere seen during eclipses.....	20
11.7. Summary	20
12. REFERENCES	20
