<i>Preface</i>	<i>page</i> ix
<i>Symbols</i>	xi
<b>1 Purposes and value of geophysical fluid dynamics</b>	<b>1</b>
<b>2 Fundamental dynamics</b>	<b>8</b>
2.1 Fluid dynamics	8
2.1.1 Representations	8
2.1.2 Governing equations	9
2.1.3 Boundary and initial conditions	13
2.1.4 Energy conservation	14
2.1.5 Divergence, vorticity, and strain rate	16
2.2 Oceanic approximations	18
2.2.1 Mass and density	19
2.2.2 Momentum	22
2.2.3 Boundary conditions	24
2.3 Atmospheric approximations	27
2.3.1 Equation of state for an ideal gas	27
2.3.2 A stratified resting state	29
2.3.3 Buoyancy oscillations and convection	31
2.3.4 Hydrostatic balance	34
2.3.5 Pressure coordinates	35
2.4 Earth's rotation	39
2.4.1 Rotating coordinates	41
2.4.2 Geostrophic balance	43
2.4.3 Inertial oscillations	47

<b>3</b>	<b>Barotropic and vortex dynamics</b>	<b>49</b>
3.1	Barotropic equations	50
3.1.1	Circulation	51
3.1.2	Vorticity and potential vorticity	54
3.1.3	Divergence and diagnostic force balance	57
3.1.4	Stationary, inviscid flows	59
3.2	Vortex movement	64
3.2.1	Point vortices	64
3.2.2	Chaos and limits of predictability	72
3.3	Barotropic and centrifugal instability	73
3.3.1	Rayleigh's criterion for vortex stability	73
3.3.2	Centrifugal instability	75
3.3.3	Barotropic instability of parallel flows	76
3.4	Eddy-mean interaction	80
3.5	Eddy viscosity and diffusion	83
3.6	Emergence of coherent vortices	86
3.7	Two-dimensional turbulence	88
<b>4</b>	<b>Rotating shallow-water and wave dynamics</b>	<b>95</b>
4.1	Rotating shallow-water equations	97
4.1.1	Integral and parcel invariants	101
4.2	Linear wave solutions	104
4.2.1	Geostrophic mode	106
4.2.2	Inertia-gravity waves	107
4.2.3	Kelvin waves	109
4.3	Geostrophic adjustment	111
4.4	Gravity wave steepening: bores and breakers	120
4.5	Stokes drift and material transport	126
4.6	Quasigeostrophy	129
4.7	Rossby waves	133
4.8	Rossby-wave emission	134
4.8.1	Vortex propagation on the $\beta$ -plane	135
4.8.2	Eastern boundary Kelvin wave	138
<b>5</b>	<b>Baroclinic and jet dynamics</b>	<b>141</b>
5.1	Layered hydrostatic model	143
5.1.1	Two-layer equations	143
5.1.2	$N$ -layer equations	147
5.1.3	Vertical modes	149

5.2	Baroclinic instability	155
5.2.1	Unstable modes	156
5.2.2	Upshear phase tilt	160
5.2.3	Eddy heat flux	161
5.2.4	Effects on the mean flow	162
5.3	Turbulent baroclinic zonal jet	164
5.3.1	Posing the jet problem	164
5.3.2	Equilibrium velocity and buoyancy structure	167
5.3.3	Zonal momentum balance	171
5.3.4	Potential vorticity homogenization	177
5.3.5	Meridional overturning circulation and mass balance	177
5.3.6	Meridional heat balance	180
5.3.7	Maintenance of the general circulation	181
5.4	Rectification by Rossby-wave radiation	182
<b>6</b>	<b>Boundary-layer and wind-gyre dynamics</b>	<b>186</b>
6.1	Planetary boundary layer	186
6.1.1	Boundary-layer approximations	187
6.1.2	The shear boundary layer	192
6.1.3	Eddy-viscosity closure	196
6.1.4	Bottom Ekman layer	197
6.1.5	Oceanic surface Ekman layer	201
6.1.6	Vortex spin down	205
6.1.7	Turbulent Ekman layer	206
6.2	Oceanic wind gyre and western boundary layer	213
6.2.1	Posing the gyre problem	215
6.2.2	Interior and boundary-layer circulations	219
6.2.3	Application to real gyres	224
6.2.4	Turbulent baroclinic wind gyres	228
	<i>Afterword</i>	233
	<i>Exercises</i>	234
	<i>References</i>	243
	<i>Index</i>	245
	<i>Colour plate section appears between pages 94 and 95</i>
