The Earth's Atmosphere

Its Physics and Dynamics

Springer

Contents

Part I Physics of the Earth's Atmosphere

1	The Sun and the Earth – The Solar System and the Earth's Gravitation	3
1.1	Introduction	3
1.2	Earth's Gravitational Force – Gravity	4
1.3	Geopotential Surfaces	6
1.4	Motion in the Earth's Gravitational Field – The Law of Central Forces	6
2	The Earth's Atmosphere – Its Origin, Composition and Properties ..	9
2.1	Introduction: Origin of the Earth's Atmosphere	9
2.2	Composition of the Atmosphere	10
2.3	Properties and Variables of the Atmosphere	12
2.3.1	Pressure	12
2.3.2	Temperature	15
2.3.3	Density	21
2.3.4	Other Variables of the Atmosphere	22
2.3.5	Observing the Atmosphere	22
2.4	Gas Laws – Equations of State	23
2.4.1	The Equation of State – General	23
2.4.2	The Equation of State of an Ideal Gas	24
2.4.3	The Equation of State of a Mixture of Gases	26
2.4.4	The Equation of State of a Real Gas	26
3	Heat and Thermodynamics of the Atmosphere	27
3.1	Introduction. The Nature of Heat and Kinetic Theory	27
3.2	The First Law of Thermodynamics	27
3.3	Specific Heats of Gases	28
3.4	Adiabatic Changes in the Atmosphere	30

3.4.1	Adiabatic Relationship Between Pressure, Temperature and Volume	30
3.4.2	Potential Temperature	30
3.4.3	Dry Adiabatic Lapse Rate of Temperature with Height ..	31
3.4.4	Static Stability of Dry Air – Buoyancy Oscillations	31
3.4.5	Adiabatic Propagation of Sound Waves	33
3.5	The Concept of Entropy	33
3.6	The Second Law of Thermodynamics	36
3.6.1	Carnot Engine	36
3.6.2	Statement of the Second Law of Thermodynamics	38
3.7	Thermodynamic Equilibrium of Systems: Thermodynamic Potentials	40
3.7.1	Free Energy or Helmholtz Potential	40
3.7.2	Free Enthalpy, or Gibbs' Potential, or Gibbs Free Energy	41
3.8	The Third Law of Thermodynamics	41
3.9	The Atmosphere as a Heat Engine	42
4	Water Vapour in the Atmosphere: Thermodynamics of Moist Air ...	43
4.1	Introduction	43
4.2	Humidity of the Air – Definitions	44
4.3	Density of Moist Air – Virtual Temperature	45
4.4	Measurement of Humidity – Hygrometers/Psychrometers	46
4.5	Ascent of Moist Air in the Atmosphere – Pseudo-Adiabatic Process	48
4.6	Saturated Adiabatic Lapse Rate of Temperature	50
4.7	Equivalent Potential Temperature	50
4.8	Variation of Saturation Vapour Pressure with Temperature	51
4.8.1	The Clausius-Clapeyron Equation	51
4.8.2	Melting Point of Ice – Variation with Pressure	53
4.9	Co-existence of the Three Phases of Water – the Triple Point	53
4.10	Stability of Moist Air	55
4.10.1	Thermodynamic Diagrams	56
5	Physics of Cloud and Precipitation	59
5.1	Introduction – Historical Perspective	59
5.2	Cloud-Making in the Laboratory – Condensation Nuclei	60
5.3	Atmospheric Nuclei – Cloud Formation in the Atmosphere	62
5.4	Drop-Size Distribution in Clouds	64
5.5	Rate of Fall of Cloud and Rain Drops	65
5.6	Supercooled Clouds and Ice-Particles – Sublimation	66
5.7	Clouds in the Sky: Types and Classification	68
5.8	From Cloud to Rain	68
5.8.1	Hydrodynamical Attraction	69
5.8.2	Electrical Attraction	72
5.8.3	Collision Due to Turbulence	72
5.8.4	Differences in Size of Cloud Particles	73

5.8.5	Differences of Temperature Between Cloud Elements . . .	73
5.8.6	The Ice-Crystal Effect	74
5.9	Meteorological Evidence – Rainfall from Cold and Warm Clouds .	75
5.9.1	Rainfall from Warm Clouds	76
5.10	Climatological Rainfall Distribution over the Globe	76
6	Physics of Radiation – Fundamental Laws	79
6.1	Introduction – the Nature of Thermal Radiation	79
6.2	Radiation and Absorption – Heat Exchanges	79
6.2.1	Conduction	79
6.2.2	Convection	79
6.2.3	Radiation	80
6.3	Properties of Radiation	81
6.4	Laws of Radiation – Emission and Absorption	82
6.4.1	Kirchhoff’s Law	82
6.4.2	Laws of Black Body and Gray Radiation	83
6.4.3	Stefan-Boltzmann Law	84
6.4.4	Wien’s Displacement Law	84
6.4.5	Planck’s Law of Black Body Radiation	84
6.4.6	Derivation of Wien’s Law and Stefan-Boltzmann Law from Planck’s Law	85
6.5	Spectral Distribution of Radiant Energy	86
6.6	Some Practical Uses of Electromagnetic Radiation	88
7	The Sun and its Radiation	89
7.1	Introduction	89
7.2	Physical Characteristics of the Sun	90
7.3	Structure of the Sun – its Interior	90
7.3.1	The Core – Nuclear Reactions	91
7.3.2	The Radiative Layer	92
7.3.3	The Convective Layer	93
7.4	The Photosphere	94
7.4.1	Sunspots	95
7.5	The Solar Atmosphere	95
7.5.1	The Reversing Layer	96
7.5.2	The Chromosphere	96
7.5.3	The Corona	96
7.6	The Solar Wind	97
7.7	The Search for Neutrinos	98
8	The Incoming Solar Radiation – Interaction with the Earth’s Atmosphere and Surface	99
8.1	Introduction – the Solar Spectrum	99
8.2	Interactions with the Upper Atmosphere (Above 80 km)	100

8.2.1	Interaction with the Solar Wind: Polar Auroras and Magnetic Storms	100
8.2.2	Interaction with the Solar Ultraviolet Radiation	102
8.3	The Mesosphere (50–80 km Layer)	102
8.4	Interaction with Ozone: the Ozonosphere (20–50 km)	102
8.4.1	Formation of Ozone	103
8.4.2	Destruction of Ozone: the Ozone Hole	103
8.4.3	Warming of the Stratosphere	104
8.4.4	Latitudinal and Seasonal Variation of Ozone	104
8.4.5	Ozone and Weather	105
8.5	Scattering, Reflection and Absorption of Solar Radiation in the Atmosphere	107
8.5.1	Scattering and Reflection	107
8.5.2	Atmospheric Absorption	107
8.6	Incoming Solar Radiation (Insolation) at the Earth's Surface	108
8.6.1	The Solar Constant	108
8.6.2	The Transparency of the Atmosphere – Effects of Clouds and Aerosols	109
8.6.3	Distribution of Solar Radiation with Latitude – The Seasonal Cycle	109
8.6.4	Seasonal and Latitudinal Variations of Surface Temperature	110
8.6.5	Diurnal Variation of Radiation with Clear and Cloudy Skies	111
8.7	Reflection of Solar Radiation at the Earth's Surface – The Albedo	113
9	Heat Balance of the Earth's Surface – Upward and Downward Transfer of Heat	115
9.1	Introduction: General Considerations	115
9.2	Heat Balance on a Planet Without an Atmosphere	116
9.3	Heat Balance on a Planet with an Atmosphere: The Greenhouse Effect	117
9.3.1	The Greenhouse Effect	118
9.4	Vertical Transfer of Radiative Heating – Diurnal Temperature Wave	119
9.5	Sensible Heat Flux	120
9.5.1	Vertical Transfer of Sensible Heat into the Atmosphere ..	120
9.6	Evaporation and Evaporative Heat Flux from a Surface	123
9.6.1	Bowen's Ratio	124
9.6.2	Evaporative Cooling	124
9.7	Exchange of Heat Between the Earth's Surface and the Underground Soil	125
9.7.1	Amplitude and Range	126
9.7.2	Time Lag	126
9.7.3	Velocity	127

9.7.4	Wavelength	127
9.7.5	Diurnal Wave	127
9.7.6	Annual Wave	128
9.8	Radiative Heat Flux into the Ocean	129
9.8.1	General Properties of Ocean Water	129
9.8.2	Optical Properties of Ocean Water – Reflection and Refraction	131
9.8.3	Absorption and Downward Penetration of Solar Radiation in the Ocean	132
9.8.4	Vertical Distribution of Temperature in the Ocean	133
9.9	The Thermohaline Circulation – Buoyancy Flux	134
9.10	Photosynthesis in the Ocean: Chemical and Biological Processes	135
10	Heat Balance of the Earth-Atmosphere System – Heat Sources and Sinks	137
10.1	Introduction – definition of heat sources and sinks	137
10.2	Physical Processes Involved in Heat Balance	138
10.3	Simpson’s Computation of Heat Budget	139
10.4	Heat Balance from Satellite Radiation Data	141
10.5	Heat Sources and Sinks from the Energy Balance Equation	145
10.6	Computation of Atmospheric Heating from Mass Continuity Equation	149
	Part II Dynamics of the Earth’s Atmosphere – The General Circulation	
11	Winds on a Rotating Earth – The Dynamical Equations and the Conservation Laws	155
11.1	Introduction	155
11.2	Forces Acting on a Parcel of Air	156
11.2.1	Pressure Gradient Force	156
11.2.2	Gravity Force	157
11.2.3	Force of Friction or Viscosity	157
11.3	Acceleration of Absolute Motion	158
11.4	Acceleration of Relative Motion	159
11.4.1	Coriolis Force	161
11.5	The Equations of Motion in a Rectangular Co-ordinate System	162
11.6	A System of Generalized Vertical Co-ordinates	162
11.7	The Equations of Motion in Spherical Co-ordinate System	164
11.8	The Equation of Continuity	167
11.9	The Thermodynamic Energy Equation	168
11.10	Scale Analysis and Simplification of the Equations of Motion	169
11.10.1	The Geostrophic Approximation and the Geostrophic Wind	170
11.10.2	Scale Analysis of the Vertical Momentum Equation	171

12	Simplified Equations of Motion – Quasi-Balanced Winds	173
12.1	Introduction	173
12.2	The Basic Equations in Isobaric Co-ordinates	173
12.2.1	Horizontal Momentum Equations	173
12.2.2	The Continuity Equation	174
12.2.3	The Thermodynamic Energy Equation	174
12.3	Balanced Flow in Natural Co-ordinates	175
12.3.1	Velocity and Acceleration in Natural Co-ordinate System	175
12.3.2	The Gradient Wind	176
12.3.3	The Geostrophic Wind	177
12.3.4	Relationship Between the Geostrophic Wind and the Gradient Wind	178
12.3.5	Inertial Motion	178
12.3.6	Cyclostrophic Motion	179
12.4	Trajectories and Streamlines	180
12.5	Streamline-Isotach Analysis	182
12.6	Variation of Wind with Height – The Thermal Wind	183
13	Circulation, Vorticity and Divergence	187
13.1	Definitions and Concepts – Circulation and Vorticity	187
13.2	The Circulation Theorem	188
13.3	Absolute and Relative Vorticity	191
13.4	Vorticity and Divergence in Natural Co-ordinates	191
13.5	Potential Vorticity	193
13.6	The Vorticity Equation in Frictionless Adiabatic Flow	196
13.7	The Vorticity Equation from the Equations of Motion	196
13.7.1	Vorticity Equation in Cartesian Co-ordinates (x, y, z)	196
13.7.2	The Vorticity Equation in Isobaric Co-ordinates	198
13.8	Circulation and Vorticity in the Real Atmosphere (In Three Dimensions)	199
13.9	Vertical Motion in the Atmosphere	200
13.9.1	The kinematic Method	200
13.9.2	The Adiabatic Method	201
13.9.3	The Vorticity Method	201
13.10	Differential Properties of a Wind Field	202
13.10.1	Translation, (u_0, v_0)	203
13.10.2	Divergence, Expansion (D)	203
13.10.3	Deformation	204
13.10.4	Rotation	205
13.11	Types of Wind Fields – Graphical Representation	205
14	The Boundary Layers of the Atmosphere and the Ocean	207
14.1	Introduction	207
14.2	The Equations of Turbulent Motion in the Atmosphere	208
14.3	The Mixing-Length Hypothesis – Exchange Co-efficients	211

14.4	The Vertical Structure of the Frictionally-Controlled Boundary Layer	212
14.4.1	The Surface Layer	212
14.4.2	The Ekman or Transition Layer	214
14.5	The Secondary Circulation – The Spin-Down Effect	217
14.5.1	The Nocturnal Jet	220
14.5.2	Turbulent Diffusion and Dispersion in the Atmosphere ..	221
14.6	The Boundary Layer of the Ocean – Ekman Drift and Mass Transport	222
14.7	Ekman Pumping and Coastal Upwelling in the Ocean	224
15	Waves and Oscillations in the Atmosphere and the Ocean	227
15.1	Introduction	227
15.2	The Simple Pendulum	228
15.3	Representation of Waves by Fourier Series	229
15.4	Dispersion of Waves and Group Velocity	230
15.5	The Perturbation Technique	231
15.6	Simple Wave Types	232
15.7	Internal Gravity (or Buoyancy) Waves in the Atmosphere	239
15.7.1	Internal Gravity (Buoyancy) Waves – General Considerations	240
15.7.2	Mountain Lee Waves	244
15.8	Dynamics of Shallow Water Gravity Waves	244
15.8.1	The Adjustment Problem – Shallow Water Equations in a Rotating Frame	245
15.8.2	The Steady-State Solution: Geostrophic Adjustment	246
15.8.3	Energy Transformations	247
15.8.4	Transient Oscillations – Poicaré Waves	250
15.8.5	Importance of the Rossby Radius of Deformation	251
16	Equatorial Waves and Oscillations	253
16.1	Introduction	253
16.2	The Governing Equations in Log-Pressure Co-ordinate System ..	254
16.2.1	The Horizontal Momentum Equations	254
16.2.2	The Hydrostatic Equation	255
16.2.3	The Continuity Equation	255
16.2.4	The Thermodynamic Energy Equation	255
16.3	The Kelvin Wave	255
16.4	The Mixed Rossby-Gravity Wave	257
16.5	Observational Evidence	259
16.6	The Quasi-Biennial Oscillation (QBO)	260
16.7	The Madden-Julian Oscillation (MJO)	262
16.8	El Niño-Southern Oscillation (ENSO)	266
16.8.1	Introduction	266
16.8.2	El Niño/La Niña	266

16.8.3	Southern Oscillation (SO)	268
16.8.4	The Walker Circulation – ENSO	270
16.8.5	Evidence of Walker Circulation in Global Data	270
16.8.6	Mechanism of ENSO?	271
17	Dynamical Models and Numerical Weather Prediction (N.W.P.)	275
17.1	Introduction – Historical Background	275
17.2	The Filtering of Sound and Gravity Waves	276
17.3	Quasi-Geostrophic Models	278
17.4	Nondivergent Models	279
17.5	Hierarchy of Simplified Models	282
17.5.1	One-Parameter Barotropic Model	282
17.5.2	A Two-Parameter Baroclinic Model	282
17.6	Primitive Equation Models	284
17.6.1	PE Model in Sigma Co-ordinates	285
17.6.2	A Two-Level Primitive Equation Model	288
17.6.3	Computational Procedure	289
17.7	Present Status of NWP	290
18	Dynamical Instability of Atmospheric Flows – Energetics and Energy Conversions	293
18.1	Introduction	293
18.2	Inertial Instability	294
18.3	Baroclinic Instability	295
18.3.1	The Model	295
18.3.2	Special Cases of Baroclinic Instability	297
18.3.3	The Stability Criterion – Neutral Curve	298
18.4	Vertical Motion in Baroclinically Unstable Waves	300
18.5	Energetics and Energy Conversions in Baroclinic Instability	302
18.5.1	Definitions	302
18.5.2	Energy Equations for the Two-Level Quasi- Geostrophic Model	304
18.6	Barotropic Instability	306
18.7	Conditional Instability of the Second Kind (CISK)	308
19	The General Circulation of the Atmosphere	311
19.1	Introduction – Historical Background	311
19.2	Zonally-Averaged Mean Temperature and Wind Fields Over the Globe	313
19.2.1	Longitudinally-Averaged Mean Temperature and Wind Fields in Vertical Sections	313
19.2.2	Idealized Pressure and Wind Fields at Surface Over the Globe in the Three-Cell Model	316
19.3	Observed Distributions of Mean Winds and Circulations Over the Globe	317

19.4	Maintenance of the Kinetic Energy and Angular Momentum	319
19.4.1	The Kinetic Energy Balance of the Atmosphere	319
19.4.2	The Angular Momentum Balance – Maintenance of the Zonal Circulation	320
19.5	Eddy-Transports	324
19.5.1	Eddy Flux of Sensible Heat	324
19.5.2	Eddy-Flux of Angular Momentum	324
19.5.3	Eddy-Flux of Water Vapour	326
19.5.4	Vertical Eddy-Transports	327
19.6	Laboratory Simulation of the General Circulation	327
19.7	Numerical Experiment on the General Circulation	331
Appendices		333
Appendix-1(A) Vector Analysis-Some Important Vector Relations		333
1.1	The Concept of a Vector	333
1.2	Addition and Subtraction of Vectors: Multiplication of a Vector by a Scalar	334
1.3	Multiplication of Vectors	335
1.4	Differentiation of Vectors: Application to the Theory of Space Curves	337
1.5	Space Derivative of a Scalar Quantity. The Concept of a Gradient Vector	338
1.6	Del Operator, ∇	339
1.7	Use of Del Operator in Different Co-ordinate Systems	340
1.7.1	Cartesian Co-ordinates (x, y, z)	340
1.7.2	Spherical Co-ordinates (λ , ϕ , r)	340
Appendix-1(B) Motion Under Earth's Gravitational Force		341
Appendix-2 Adiabatic Propagation of Sound Waves		342
Appendix-3 Some Selected Thermodynamic Diagrams		343
Appendix-4 Derivation of the Equation for Saturation Vapour Pressure Curve Taking into Account the Temperature Dependence of the Specific Heats (After Joos, 1967)		344
Appendix-5 Theoretical Derivation of Kelvin's Vapour Pressure Relation for e_T/e_s		346
Appendix-6 Values of Thermal Conductivity Constants for a Few Materials, Drawn from Sources, Including 'International Critical Tables' (1927), 'Smithsonian Physical Tables' (1934), 'Landholt-Bornstein' (1923–1936), 'McAdams' (1942) and others		348
Appendix-7 Physical Units and Dimensions		349
Appendix-8 Some Useful Physical Constants and Parameters		350
References		353
Author Index		359
Subject Index		363
