Contents

	Preface	*page ix*
1	**Introduction to measurement**	1
	Concepts and indicants	2
	Measurement and theory construction	4
	Language of measurement	6
	Classical test theory	7
	Reformulation of classical test theory	12
	Criteria for assessing reliability and validity	15
	Conclusion	17
2	**Factor analysis**	19
	Factor analysis models	19
	Extraction of factors	25
	Rotation of factors	35
	General factor–analytic framework	46
	Appendix: Natural trigonometric functions for angles in degrees	47
3	**Reliability**	48
	Composites versus single indicants	48
	Types of reliability	52
	Cronbach's alpha	56
	Factor analysis and reliability	59
	Correction for attenuation	63
	A Monte Carlo study	67
	Conclusion	75
4	**Validity**	77
	Types of validity	78
	Effects of systematic error on factor analysis	84
	Detecting method artifacts through construct validation	89
	Measuring self-esteem	91
	Conclusion	100

5	**Evaluating systematic error**	**102**
	Factor analysis, method artifacts, and construct validation	103
	Qmatrix factor analysis and method artifacts	115
	A substantive example: FIRO-B	122
	Conclusion	136
6	**Integrating reliability and validity**	**137**
	Detectable and undetectable method artifacts	137
	Reliability and validity of indicants and scales	144
	Conclusion	158
	Appendix: Functions for Tables 6.5 and 6.6	160
	Appendix: Multiple indicators	**162**
	An empirical example	163
	Costner's path-analytic approach	169
	Jöreskog's analysis-of-covariance-structures approach	173
	Summary	184
	Bibliography	*187*
	Index	*194*
