

Contents

Preface	v
Designs and estimators for variance components, R. L. Anderson	1
Combined intra- and inter-block estimation of treatment effects in incomplete block designs R. C. Bose	31
Updating methods for linear models for the addition or deletion of observa- tions, J. M. Chambers	53
Approaches in sequential design of experiments, H. Chernoff	67
Balanced optimal 2^8 fractional factorial designs of resolution V , $52 \leq N$ ≤ 59 , D. V. Chopra	91
Two recent areas of sample survey research, W. G. Cochran	101
Fitting and looking at linear and log linear fits, A. P. Dempster	117
Tests of model specification based on residuals, J. Durbin	129
Minimal unbiased designs for linear parametric functions, W. T. Federer, A. Hedayat and B. L. Raktoe	145
Optimal experimental designs for discriminating two rival regression models, V. V. Fedorov	155
Multivariate statistical inference under marginal structure, II, L. J. Gleser and I. Olkin	165
The availability of tables useful in analyzing linear models, R. F. Gunst and D. B. Owen	181
Data monitoring criteria for linear models, H. O. Hartley and J. E. Gentle	197
Computing optimum designs for covariance models, D. A. Harville	209
Repeated measurements designs, I, A. Hedayat and K. Afsarinejad	229
Design of genetical experiments, K. Hinkelmann	243
Recent developments in randomized response designs, D. G. Horvitz, B. G. Greenberg and J. R. Abernathy	271
Robustness and designs, P. J. Huber	287
Inference from experiments and randomization, O. Kempthorne	303
Construction and optimality of generalized Youden designs J. Kiefer	333
Tests for the equality of the covariance matrices of correlated multivariate normal populations, P. R. Krishnaiah	355

An asymptotically optimal Bayes solution for group testing, S. Kumar and M. Sobel	367
Distances between experiments, L. Le Cam	383
Design of experiments in medical research, A. Linder	397
Determining subsets by unramified experiments, B. Lindström	407
A two-armed bandit with terminal decision (Bayes rule), D. A. Meeter	419
The interface between simulation experiments and real world experiments, T. H. Naylor and D. S. Burdick	427
Problems of design and of evaluation of rain making experiments, J. Neyman	443
Distribution-free approaches to general linear models, M. L. Puri and P. K. Sen	459
Theory of estimation of parameters in the general Gauss-Markoff model, C. Radhakrishna Rao.	475
On the foundations of survey sampling, J. N. K. Rao	489
Designs for searching non-negligible effects, J. N. Srivastava	507
Some problems in the design and interpretation of experimental data in protein nutrition, P. V. Sukhatme	521
Bayes, Hilbert, and least squares, W. A. Thompson, Jr.	541
Mathematical morphology, G. S. Watson	547
Lower bounds on convergence rates of weighted least squares to best linear unbiased estimators, J. S. Williams	555
Simple conditions for optimum design algorithms, H. P. Wynn	571
The early history of experimental design, P. Yates	581
Designs on random fields, D. Ylvisaker	593
Sequential search of optimal dosages: The linear regression case, S. Zacks and B. H. Eichhorn	609
Aspects of the planning and analysis of clinical trials in cancer, M. Zelen	629
Error structures, projections and conditional inverses in linear model theory, G. Zyskind	647
Abstracts of Contributed Papers	665
Author Index	691
