

TABLE OF CONTENTS

Introduction	1
Chapter I. First Order Number Theory	31
1. The Finitary System $\Psi$	31
2. A Constructive Consistency Proof for $\Psi$	54
3. The Infinitary System $\Omega$ ; $\Psi$ as a Subsystem of $\Omega$	77
4. A Constructive Consistency Proof for $\Omega$	99
5. The Incompleteness of $\Psi$ (Missing Provable Ordinals)	110
Chapter II. Second Order Logic	153
1. Two Formulations of Second Order Logic; Translation Procedures	154
2. Second Order Models and Truth Sets	176
3. Consistency and Completeness Proofs	185
4. Logical Frameworks for Higher Order Logic and Type Theory - The Henkin Completeness Theorem	205
Chapter III. Other Higher Order Systems Due to Schütte	215
1. The System $\Lambda$ of Type-Free Logic	215
2. The System $T$ of Ramified Type Theory	240
3. Systems of Analysis in Ramified Type Theory: $\Gamma$ and $\Gamma^*$	251
4. Transfinite Induction in $\Gamma$ and $\Gamma^*$	273
5. The Interpretation of Analysis	288
Appendix 1. Cut Elimination in First Order Logic as Repetition Introduction	290
Appendix 2. A Translation Procedure between Tableau Systems and Schütte Systems with Positive and Negative Parts	308
Appendix 3. Applications of Gentzen's (Second) Consistency Proof to Intuitionistic Number Theory and Analysis	322
Bibliography	335
