

Table of Contents

Chapter I. Isometric Embedding	1
§1. Introduction	1
§2. Isometric Embedding in Hilbert Space	1
§3. Functions of Negative Type	6
§4. Radial Positive Definite Functions	8
§5. A Characterization of Subspaces of L^p , $1 \leq p \leq 2$	14
Chapter II. The Classes $N(X)$ and $RPD(X)$: Integral Representations	25
§6. Radial Positive Definite Functions on \mathbb{R}^n	25
§7. Positive Definite Functions on Infinite-Dimensional Linear Spaces ..	27
§8. Functions of Negative Type on L^p Spaces	36
§9. Functions of Negative Type on \mathbb{R}^n	38
Chapter III. The Extension Problem for Contractions and Isometries	46
§10. Formulation	46
§11. The Kirszbraun Intersection Property	47
§12. Extension of Contractions for Pairs of Banach Spaces	51
§13. Special Extension Problems	62
Chapter IV. Interpolation and L^p Inequalities	76
§14. A Multi-Component Riesz-Thorin Theorem	76
§15. L^p Inequalities	79
§16. A Packing Problem in L^p	86
Chapter V. The Extension Problem for Lipschitz-Hölder Maps between L^p Spaces	93
§17. K -Functions and an Extension Procedure for Bilinear Forms	93
§18. Examples of K -Functions	97
§19. The Contraction Extension Problem for the Pairs (L^q_2, L^p)	98
Bibliography	102
Author Index	105
Subject Index	106
List of Symbols	108
