

	Page
§1. Introduction	1
1.1. A short history of the problem	1
1.2. Classical results	2
1.3. Later developments	5
1.4. Some questions posed by the classical results	5
1.5. Outline of the paper	6
§2. Results	7
2.1. Geometry of Poincare map (the main result)	8
2.2. Qualitative analysis of the equation-results	10
2.3. An informal explanation of the shape of Poincare map; geometry of Levinson's results	16
A. Global behaviour of the phase flow	17
B. Geometry of Levinson's results	23
C. An application to the large amplitude case	25
2.4. A family of annulus maps	26
A. An example of a family of annulus maps	27
B. Projected circle maps; notations	28
C. Hypothesis	30
D. Analysis of the map	31
§3. Proof of the Hypothesis for an equation of van der Pol type	35
3.0. Statement of the main result	35
3.1. Construction of the window map	37
A. Factorization	37
B. Construction of the window $r$	38
3.2. Global behaviour of the solutions; Linearized and Hessian systems	41
A. Behaviour of the solutions	42
B. Linearized and Hessian systems	44
3.3. Deformation of the window $r$ with the flow	45
3.4. Proof of H1	47
3.5. Proof of H2	56
3.6. Nondegeneracy of the homoclinic tangency	61
§4. Qualitative analysis of the equation - proof of Theorem 2.2	68
Appendix to §2.4. - Proof of Theorem 2.3	74
Appendix to §3.1.	89
A. Two auxiliary lemmas	89
B. Proof of Proposition 3.1	89
C. Proof of Proposition 3.2	94
D. Proof of the auxiliary lemmas	96

Appendix to §3.2	99
A. Proof of theorem 3.2	99
B. Proof of Lemmas 3.2 - 3.6	116
Appendix to §3.4. - Proof of Proposition 3.4	131
A. Connection between $f_{\sigma}$ and $g_{\sigma}$	131
B. Proof of Proposition 3.4	133
C. Proofs of Lemmas A3.4 - 1, 2, 3	134
