CONTENTS

CHAPTER 0: PRELIMINARIES

0.1. Orderings. viii

0.2. Linear spaces. x

0.3. Topological linear spaces. xii

CHAPTER 1: ORDERED LINEAR SPACES

Introduction. 1

1.1. Wedges, cones and orderings. 2

1.2. Order-convexity. 9

1.3. Order-units and Archimedean orderings. 11

1.4. Direct sums and quotient spaces. 16

1.5. Linear mappings and functionals. 18

1.6. Extension and separation theorems. 24

1.7. Decomposition of a linear functional into monotonic components. 27

1.8. Extremal monotonic linear functionals. 31

1.9. Bases for cones. 34

1.10. Regular and maximal order-convex subspaces. 37

CHAPTER 2: LINEAR LATTICES AND RIESZ SPACES

Introduction. 40

2.1. Riesz spaces. 41

2.2. Linear lattices: basic theory. 43

2.3. Positive and negative parts and moduli. 51

2.4. Disjointness and bands. 57

2.5. Order-completeness. 61
2.6. Linear mappings and functionals. 67
2.7. Discrete and extremal monotonic linear mappings. 75

CHAPTER 3: ORDERED TOPOLOGICAL LINEAR SPACES

Introduction. 78
3.1. Elementary theory. 79
3.2. Locally order-convex spaces and allied sets... 86
3.3. Open decompositions. 94
3.4. The duality of self-alliedness and decomposition properties. 99
3.5. Complete metrizable spaces. 105
3.6. Normed spaces. 111
3.7. Order-unit seminorms. 116
3.8. Cones with bases. 120
3.9. Base seminorms. 128
3.10. Intrinsic topologies. 131
3.11. Nearly directed subspaces. 136
3.12. Locally compact wedges and cones. 141

CHAPTER 4: LINEAR LATTICES WITH A TOPOLOGY

Introduction. 148
4.1. Continuity of the lattice operations. 149
4.2. Linear functionals, duality and different topologies. 154
4.3. M-spaces and pseudo-M-spaces. 158
4.4. L-spaces. 167

CHAPTER 5: ORDERED ALGEBRAS

Introduction. 170

5.1. Basic results. 170

5.2. Multiplicative and extreme monotonic linear mappings. 174

5.3. Spectral properties of positive elements. 177

APPENDIX. CS-closed sets. 183
