Preface .. .. .	v
Note to the reader .. .. .	ix
Some terminology, notations and conventions used throughout this book .. .. .	xi
<b>1: Categories and Functors</b> .. .. .	<b>1</b>
1.1 The notion of a category. Examples .. .. .	1
1.2 Special objects and morphisms .. .. .	3
1.3 Functors .. .. .	5
1.4 Inductive and projective limits .. .. .	8
1.5 Adjoint functors. Equivalences of categories .. .. .	11
<b>2: Abelian Categories</b> .. .. .	<b>16</b>
2.1 Preadditive and additive categories .. .. .	16
2.2 The canonical factorization of a morphism. Preabelian categories .. .. .	23
2.3 Abelian categories .. .. .	27
2.4 Fibred products and fibred sums .. .. .	32
2.5 Basic lemmas on abelian categories .. .. .	34
2.6 The isomorphism theorems .. .. .	38
2.7 Direct sums of subobjects .. .. .	45
2.8 Inductive limits. The conditions $Ab$ . .. .. .	50
<b>3: Additive Functors</b> .. .. .	<b>65</b>
3.1 Additive functors .. .. .	66
3.2 Exactness of functors. Injective and projective objects .. .. .	68
3.3 The injective and projective objects in the category $Ab$ . .. .. .	77
3.4 Categories of additive functors. Modules. .. .. .	79
3.5 Special objects in abelian categories .. .. .	88
3.6 Tensor products. A characterization of functor categories .. .. .	98
3.7 Tensor products of modules .. .. .	108
3.8 Flat modules .. .. .	120
3.9 Some remarks on projective modules .. .. .	128
3.10 Injective envelopes .. .. .	135
3.11 Semisimple rings .. .. .	141

4: <i>Localization</i>	148
4.1 Categories of fractions. Calculus of fractions	151
4.2 The spectral category of an abelian category	160
4.3 The quotient category of an abelian category relative to a dense subcategory	165
4.4 The section functor	174
4.5 Localization in categories with injective envelopes	181
4.6 Localization in <i>Ab</i> 3-categories	186
4.7 Sheaves over a topological space	192
4.8 Torsion theories	199
4.9 Localizing subcategories in categories of modules	209
4.10 Localization in categories of modules	219
4.11 Left exact functors. The embedding theorem	226
4.12 The study of the localization ring of a ring	234
4.13 The complete ring of quotients	240
4.14 Some remarks on Grothendieck categories	247
4.15 Finiteness conditions on localizing systems	255
4.16 Flat epimorphisms of rings	258
4.17 Left quasi-orders of a ring	270
4.18 Rings of fractions	280
4.19 Left orders	286
4.20 The left spectrum of a ring	295
4.21 Bilocalizing subcategories	307
5: <i>The Krull–Remak–Schmidt Theorem and Decomposition Theories</i>	316
5.1 The classical Krull–Remak–Schmidt theorem	318
5.2 The structure of spectral Grothendieck categories	323
5.3 Locally coirreducible categories	327
5.4 Decomposition theory	336
5.5 Semi-noetherian categories	343
5.6 Semi-artinian categories	357
5.7 Noetherian and artinian categories	366
5.8 Locally noetherian categories	371
5.9 Noetherian and artinian rings	379
5.10 Primary decomposition theory	387
5.11 Decomposition theories on l.n.-categories	392
6: <i>Duality</i>	402
6.1 Linearly compact subcategories	402
6.2 Topologically linearly compact rings	416
6.3 The duality theorem for Grothendieck categories	423
6.4 Duality theory for l.n. and l.f.-categories	432
6.5 Colocalization	437
Bibliography	451
Subject Index	461
