

# Table of Contents

<b>Chapter I</b>	<b>Convexity in Linear Spaces</b>	<b>1</b>
§ 1.	Linear Spaces	1
§ 2.	Convex Sets	6
§ 3.	Convex Functions	10
§ 4.	Basic Separation Theorems	14
§ 5.	Cones and Orderings	16
§ 6.	Alternate Formulations of the Separation Principle	19
§ 7.	Some Applications	24
§ 8.	Extremal Sets	32
	Exercises	39
<b>Chapter II</b>	<b>Convexity in Linear Topological Spaces</b>	<b>46</b>
§ 9.	Linear Topological Spaces	46
§10.	Locally Convex Spaces	53
§11.	Convexity and Topology	59
§12.	Weak Topologies	65
§13.	Extreme Points	73
§14.	Convex Functions and Optimization	82
§15.	Some More Applications	97
	Exercises	109
<b>Chapter III</b>	<b>Principles of Banach Spaces</b>	<b>119</b>
§16.	Completion, Congruence, and Reflexivity	119
§17.	The Category Theorems	131
§18.	The Šmulian Theorems	145
§19.	The Theorem of James	157
§20.	Support Points and Smooth Points	164
§21.	Some Further Applications	176
	Exercises	191
<b>Chapter IV</b>	<b>Conjugate Spaces and Universal Spaces</b>	<b>202</b>
§22.	The Conjugate of $C(\Omega, \mathbb{R})$	202
§23.	Properties and Characterizations of Conjugate Spaces	211
§24.	Isomorphism of Certain Conjugate Spaces	221
§25.	Universal Spaces	225
	Exercises	231
