

Contents

Preface	ix
1. Introduction	1
Methods for Analyzing Change	2
The Historical Development of Panel Analysis Methods	4
Linear Models for Analyzing Panel Data	6
2. The Algebra of Change	7
Stability and Change	7
Change as a Determinant of Time 2 Status	16
An Illustration: The Stability of Alienation	17
Appendix A: An Analytic Investigation of the Stability Coefficient	21
Appendix B: Brief Introduction to LISREL	23
3. The Causal Analysis of Change	25
Causality in Cross-Sectional Analysis	26
A General Two-Wave, Two-Variable Model	28
Fixing Values of Parameters	30
Constraining Associations with Control Variables	31
Consistency Constraints in Multiwave Models	33
Appendix: Approach to Equilibrium in Two-Variable, Two-Wave Panel Models	46

4. The Components of Change	47
The Decomposition of Change	47
Change in Political Democracy	49
Structural Change	50
The Structure of Black and White Mobility	51
Structural and Exchange Components of Change	52
5. Cross-Lagged Panel Correlations	59
Background	59
CLPC as a Tool for Causal Analysis	60
CLPC as a Test for Spuriousness	65
CLPC as a Control for Spuriousness	68
The Comparison of Contending Models	70
Appendix: CLPC as a Test for Spuriousness	72
6. Separating the Effects of Position and Change	77
Fixing Values of Parameters	79
Constraining Relative Magnitudes of Parameters	80
Elaborating the Causal Model	82
Nonlinear Consistency Models	84
Appendix: The Transformation and Interpretation of Nonlinear Models	85
7. Serially Correlated Errors	87
Sources of Serial Correlation	87
Strategies for Dealing with Serially Correlated Errors	89
8. Initial Model Specification	99
The General Approach	100
Theoretical Correlograms	102
Basic Patterns of Correlograms	106
Diagnostic Implications	111
Extension to More Complex Models	113
Appendix: The Analytical Properties of the Correlogram	118
Extensions	122
9. Sensitivity Analysis	125
The Two-Wave, Two-Variable Model Revisited	127
Incorrect Casual Lag	132
10. Measurement Error	137
Measurement Error in Regression Analysis	137
Measurement Error in Panel Models	140
Measurement Error Models	145
Overview of Results	156

11. Alternative Approaches	157
Pooling Methods	157
Differential Equations	163
12. Design Considerations	175
Designing a Panel Study	175
The Follow-Back Panel	176
Measurement Intervals	179
Number of Waves	181
Panel Attrition	182
References	189
Subject Index	199
