<b>Introduction</b> . . . . .	<b>19</b>
<b>1. Finite-dimensional linear analysis</b> . . . . .	<b>27</b>
<b>A. Basic algebraic concepts</b> . . . . .	<b>27</b>
<b>1.1. Finite-dimensional complex linear spaces</b> . . . . .	<b>27</b>
<b>1.1.1. Complex linear spaces, linear combinations, linear dependence, dimension</b> . . . . .	<b>27</b>
<b>1.1.2. Bases, coordinates, isomorphic spaces</b> . . . . .	<b>28</b>
<b>1.1.3. Subspaces</b> . . . . .	<b>29</b>
<b>1.1.4. Factor spaces</b> . . . . .	<b>30</b>
<b>1.2. Antilinear forms and the adjoint space</b> . . . . .	<b>31</b>
<b>1.2.1. Definition and basis representation, linear combinations</b> . . . . .	<b>31</b>
<b>1.2.2. Adjoint space, scalar product, adjoint basis</b> . . . . .	<b>31</b>
<b>1.2.3. The space <math>X^{**}</math>, annihilator</b> . . . . .	<b>32</b>
<b>1.3. Norms</b> . . . . .	<b>32</b>
<b>1.3.1. Definition and simple properties of norms</b> . . . . .	<b>32</b>
<b>1.3.2. Norms on <math>X^*</math> and <math>X^{**}</math></b> . . . . .	<b>33</b>
<b>1.4. Unitary spaces</b> . . . . .	<b>34</b>
<b>1.4.1. Inner product, norm and adjoint space</b> . . . . .	<b>34</b>
<b>1.4.2. Orthogonality, orthonormal systems, Parseval's equation</b> . . . . .	<b>34</b>
<b>1.5. Linear operators</b> . . . . .	<b>35</b>
<b>1.5.1. Definition and simple properties</b> . . . . .	<b>35</b>
<b>1.5.2. Matrix elements</b> . . . . .	<b>36</b>
<b>1.6. Linear operations for linear operators</b> . . . . .	<b>37</b>
<b>1.6.1. Linear combinations, products, invertibility, determinant and trace</b> . . . . .	<b>37</b>
<b>1.6.2. Powers, operator polynomials</b> . . . . .	<b>38</b>
<b>1.7. Adjoint operator</b> . . . . .	<b>38</b>
<b>1.7.1. Definition and simple properties</b> . . . . .	<b>38</b>
<b>1.7.2. Matrix representations</b> . . . . .	<b>39</b>
<b>1.8. Norms of operators</b> . . . . .	<b>39</b>
<b>1.8.1. Definition (assigned to a given vector norm)</b> . . . . .	<b>40</b>

1.8.2.	Norms of operators as norms on the $N^2$ -dimensional space . . . . .	40
1.8.3.	Norm of $A^n$ , spectral radius . . . . .	41
1.9.	Projections . . . . .	41
1.9.1.	Definition . . . . .	41
1.9.2.	Disjoint systems of projections, completeness . . . . .	42
1.9.3.	Adapted bases . . . . .	42
1.9.4.	Subprojections . . . . .	42
1.10.	Linear operators on unitary spaces . . . . .	43
1.10.1.	Adjoint operators . . . . .	43
1.10.2.	Normal and unitary operators, orthogonal projections . . . . .	43
1.11.	Operator algebras . . . . .	44
1.11.1.	Definition, sum and intersection of algebras . . . . .	44
1.11.2.	Commutants . . . . .	44
B.	Analysis on finite-dimensional complex linear spaces . . . . .	45
1.12.	Convergence . . . . .	45
1.12.1.	Definition . . . . .	45
1.12.2.	Continuity, boundedness, theorem of Bolzano-Weierstrass . . . . .	45
1.12.3.	Infinite series of vectors, absolute convergence . . . . .	46
1.13.	Vector-valued functions of a scalar argument . . . . .	47
1.13.1.	Vector-valued functions of a real argument, limit, continuity, differentiation . . . . .	47
1.13.2.	Riemann integrals . . . . .	47
1.13.3.	Vector-valued functions of a complex argument, Riemann integral, holomorphy, Cauchy's integral theorem . . . . .	48
1.13.4.	Power series, uniform convergence . . . . .	49
1.13.5.	Laurent series; polynomial, rational and meromorphic vector-valued functions . . . . .	49
1.14.	Analysis of linear operators . . . . .	50
1.14.1.	Convergence; continuity of the linear operations, products, norms and $Ax$ . . . . .	50
1.14.2.	Infinite series of operators, absolute convergence . . . . .	51
1.14.3.	Exponential function, Neumann series, continuity of $A^{-1}$ . . . . .	51
1.15.	Operator-valued functions of a scalar argument . . . . .	52
1.15.1.	Operator-valued functions of a real argument; limit, continuity, differentiation and Riemann integrals . . . . .	52
1.15.2.	Operator-valued functions of a complex argument; limit, continuity, differentiation and Riemann integrals . . . . .	53
1.15.3.	Holomorphy and Cauchy's integral theorem . . . . .	54
1.15.4.	Power series; exponential functions, Neumann series; meromorphic operator-valued functions, projection-valued functions . . . . .	54
1.16.	Vector and operator differential equations . . . . .	55
1.16.1.	Real argument . . . . .	55
1.16.2.	Complex argument . . . . .	55
2.	<b>Spectral theory and Jordan structure of linear operators . . . . .</b>	<b>57</b>
2.1.	Eigenvalue problem . . . . .	57
2.1.1.	Basic concepts . . . . .	57
2.1.2.	Spectrum, resolvent . . . . .	58

2.2.	Invariants, reducing and irreducible subspaces (the generalized eigenvalue problem)	59
2.2.1.	Invariant subspaces . . . . .	60
2.2.2.	Reducing subspaces . . . . .	60
2.2.3.	Complete disjoint systems of reducing projections . . . . .	61
2.2.4.	Irreducible subspaces . . . . .	61
2.2.5.	Spectral radius and nilpotent operators . . . . .	62
2.3.	Cauchy-Riesz functional calculus . . . . .	63
2.3.1.	Motivation . . . . .	63
2.3.2.	Cauchy-Riesz integral . . . . .	64
2.3.3.	Spectral mapping theorem . . . . .	65
2.4.	Riesz eigenprojections . . . . .	66
2.4.1.	Definition and simple properties . . . . .	66
2.4.2.	Eigennilpotent (operator) and index . . . . .	67
2.4.3.	Jordan vectors . . . . .	67
2.4.4.	Algebraic multiplicity and the characteristic polynomial . . . . .	69
2.5.	Spectral representation . . . . .	69
2.5.1.	Existence . . . . .	69
2.5.2.	Uniqueness . . . . .	70
2.6.	Partial fraction decomposition of the resolvent . . . . .	72
2.6.1.	Principal parts . . . . .	72
2.6.2.	Reduced resolvents . . . . .	73
2.6.3.	Decomposition into partial fractions. Corollaries . . . . .	75
2.7.	Spectral representation of normal and other special operators . . . . .	76
2.7.1.	Adjoint operators . . . . .	76
2.7.2.	Normal operators . . . . .	77
2.7.3.	Unitary and selfadjoint operators . . . . .	79
2.8.	Continuous perturbations of an operator . . . . .	79
2.8.1.	Spectrum and resolvent . . . . .	79
2.8.2.	Eigenprojections . . . . .	80
2.9.	Jordan structure of a linear operator . . . . .	81
2.9.1.	Eigennilpotent kernels . . . . .	81
2.9.2.	Construction of a Jordan basis in $X$ . . . . .	82
2.9.3.	Jordan operators, Jordan projections . . . . .	83
2.9.4.	Uniqueness of the Jordan structure, Frobenius formulas . . . . .	85
2.9.5.	Jordan structure of an arbitrary operator . . . . .	86
2.9.6.	Complete system of invariants for a class of similar matrices, elementary divisors	86
2.9.7.	Alternate notation for the system of Jordan projections . . . . .	87
2.9.8.	Adjoint operator . . . . .	87
2.9.9.	Lagrange-Sylvester formula . . . . .	88
2.10.	Commutant of $A$ . . . . .	89
2.10.1.	Reduction of the problem . . . . .	89
2.10.2.	Commutant for operators with only one eigenvalue . . . . .	89
2.10.3.	Special case . . . . .	92

2.11.	Algebras and their commutants . . . . .	93
2.11.1.	Schur's lemma . . . . .	93
2.11.2.	Reducing and irreducible projections of algebras . . . . .	96
<b>8.</b>	<b>Spectral theory of meromorphic operator-valued functions . . . . .</b>	<b>98</b>
3.1.	Formal perturbation theory . . . . .	99
3.1.1.	Selfadjoint perturbations in the case $N = 2$ . . . . .	99
3.1.2.	Perturbation theory (according to E. Schrödinger) . . . . .	99
3.1.3.	General perturbation problem . . . . .	102
3.2.	Spectrum . . . . .	103
3.2.1.	Characteristic polynomial . . . . .	103
3.2.2.	Simple and multiple points . . . . .	104
3.2.3.	Function theory of the eigenvalues . . . . .	105
3.2.4.	Holomorphic and polynomial operator-valued functions . . . . .	106
3.2.5.	Local behavior of the eigenvalues in the neighborhood of simple points . . . . .	106
3.2.6.	Local (splitting) behavior of the eigenvalues in the neighborhood of multiple points . . . . .	107
3.2.7.	Splitting points and normal points . . . . .	110
3.2.8.	The case of a simple eigenvalue $\lambda_0$ of $A(z_0)$ . . . . .	110
3.2.9.	Local behavior of the eigenvalues in the neighborhood of poles of $A(z)$ . . . . .	111
3.2.10.	Examples . . . . .	112
3.3.	Eigenprojections of meromorphic operator-valued functions . . . . .	113
3.3.1.	Resolvent . . . . .	114
3.3.2.	The $(z_0, \lambda_0)$ -groups . . . . .	115
3.3.3.	Group projections and eigenprojections . . . . .	116
3.3.4.	Analytic eigenprojection-valued functions on the Riemann surfaces defined by the characteristic polynomial . . . . .	118
3.3.5.	Eigenprojections and spectral representation of $A(z)$ for simple points . . . . .	120
3.3.6.	Algebraoid behavior of the eigenprojections at splitting points . . . . .	122
3.3.7.	Poles of $P(\zeta)$ at branching points . . . . .	124
3.3.8.	Algebraoid behavior of the eigenprojections at points whose trace points are poles of $A(z)$ . . . . .	125
3.3.9.	Global representation of the projection-valued functions $P(\zeta)$ . . . . .	126
3.3.10.	Eigennilpotent . . . . .	127
3.3.11.	Holomorphic and polynomial operator-valued functions . . . . .	128
3.3.12.	Spectral representation of $A(z)$ in $G$ . . . . .	128
3.3.13.	Spectral representation of $A(z)$ in the neighborhood of an arbitrary point . . . . .	129
3.3.14.	Case of a simple eigenvalue $\lambda_0$ of $A_0$ . . . . .	131
3.3.15.	Examples (cf. Subsect. 3.2.10) . . . . .	131
3.4.	Transformation of complete disjoint systems of holomorphic projections . . . . .	133
3.4.1.	Motivation . . . . .	133
3.4.2.	Transformation theorem . . . . .	136
3.4.3.	Transformation of the eigenprojections of $A(z)$ . . . . .	139
3.4.4.	Transformation of the group projections of $A(z)$ . . . . .	140
3.5.	Normal and selfadjoint perturbations . . . . .	142
3.5.1.	Normal perturbations . . . . .	142
3.5.2.	Transformation of normal perturbations . . . . .	144

3.5.3.	Selfadjoint perturbations . . . . .	145
3.5.4.	Transformation of selfadjoint systems of projections . . . . .	146
3.5.5.	Perturbed eigenvectors of a selfadjoint perturbation . . . . .	148
3.5.6.	Branching for selfadjoint perturbations . . . . .	150
3.6.	Perturbations of product type with selfadjoint factors. . . . .	150
3.6.1.	Definition and simple properties . . . . .	150
3.6.2.	Perturbation theorem . . . . .	152
3.7.	Perturbation series . . . . .	153
3.7.1.	Group projection and mean value . . . . .	154
3.7.2.	Perturbation series of the group projection . . . . .	154
3.7.3.	Perturbation series of the mean value . . . . .	156
3.7.4.	Second method for the calculation of the perturbation series of the mean value . . . . .	157
3.7.5.	Linear perturbations . . . . .	159
3.8.	Some coefficients of perturbation series represented with respect to a basis . . . . .	160
3.8.1.	$\lambda_0$ semisimple . . . . .	160
3.8.2.	$\lambda_0$ simple . . . . .	161
3.8.3.	Calculation of $P_1$ ; $\lambda_0$ semisimple . . . . .	161
3.8.4.	Calculation of $P_1$ ; $\lambda_0$ simple . . . . .	162
3.8.5.	Selfadjoint operators $A_0, A_1, A_2$ ; $\lambda_0$ simple . . . . .	163
3.9.	Applications . . . . .	163
3.9.1.	Determination of perturbed groups of eigenvalues . . . . .	163
3.9.2.	Finite selfadjoint perturbations of selfadjoint operators . . . . .	164
<b>4.</b>	<b>Linear operators on linear spaces over commutative fields; first applications . . . . .</b>	<b>167</b>
4.1.	Basic material . . . . .	168
4.1.1.	Algebra of linear operators . . . . .	168
4.1.2.	Polynomial operators . . . . .	168
4.1.3.	Division algorithms . . . . .	169
4.1.4.	Theorem of Cayley-Hamilton . . . . .	170
4.1.5.	Minimal polynomials . . . . .	171
4.1.6.	Determination of the minimal polynomial . . . . .	171
4.1.7.	Consequence . . . . .	172
4.2.	Spectral representation of an operator from $\mathcal{L}(X)$ . . . . .	173
4.2.1.	Characteristic polynomial . . . . .	173
4.2.2.	Reducing projections . . . . .	173
4.2.3.	Spectral representation . . . . .	175
4.2.4.	Consequence . . . . .	176
4.3.	Decomposition of operators whose characteristic polynomials are powers of a prime polynomial into a direct sum of irreducible operators . . . . .	176
4.3.1.	Preliminaries . . . . .	177
4.3.2.	Construction of a direct decomposition of $X$ . . . . .	178
4.3.3.	Direct decomposition of $A$ . Structure of the irreducible parts . . . . .	181
4.3.4.	Special case, $g = 1$ . . . . .	184
4.3.5.	Uniqueness of the generalized Jordan structure . . . . .	184

4.4.	Generalized Jordan structure of arbitrary operators . . . . .	185
4.4.1.	Decomposition of an arbitrary operator . . . . .	185
4.4.2.	Complete systems of invariants of a class of similar matrices; elementary divisors	186
4.4.3.	Decomposition with respect to a given reducing projection . . . . .	187
	Applications . . . . .	187
4.5.	Linear spaces of meromorphic vector-valued functions and their linear operators	187
4.5.1.	Meromorphic vector-valued functions . . . . .	187
4.5.2.	Embedding of $X$ into $X(G, \mathcal{M})$ . . . . .	188
4.5.3.	$X(G, \mathcal{M})$ as a linear space over $\mathcal{M}$ . . . . .	188
4.5.4.	Linear operators on $X(G, \mathcal{M})$ . . . . .	189
4.6.	Meromorphic reducing projections of meromorphic operator-valued functions . .	189
4.6.1.	Construction of meromorphic-irreducible reducing projections . . . . .	189
4.6.2.	Spectral representation of $A(z)$ . . . . .	190
4.6.3.	Decomposition of $P_\rho(z)$ into meromorphic-irreducible projections . . . . .	191
4.7.	Transformation of complete disjoint systems of meromorphic projections . . . .	191
4.7.1.	Transformation of systems of projections from $\mathcal{L}(X(G); \mathcal{M})$ . . . . .	192
4.7.2.	Application . . . . .	193
<b>5.</b>	<b>Jordan structure of meromorphic operator-valued functions.</b> . . . . .	<b>195</b>
5.1.	Algebroid vector-valued and operator-valued functions . . . . .	198
5.1.1.	Algebroid vector-valued functions . . . . .	198
5.1.2.	Algebroid operator-valued functions . . . . .	199
5.1.3.	Transformation of complete disjoint systems of algebroid projection-valued functions . . . . .	200
5.2.	Algebraic determination of the eigenprojections of meromorphic operator-valued functions . . . . .	201
5.2.1.	Characteristic polynomial . . . . .	201
5.2.2.	Construction of the projections $Q(\zeta, \mathfrak{P})$ . . . . .	201
5.2.3.	Fixing of the argument $\zeta$ . . . . .	202
5.2.4.	Identity of $P(\zeta)$ and $Q(\zeta, \mathfrak{P})$ . . . . .	202
5.2.5.	Further properties of $P(\zeta)$ . . . . .	203
5.2.6.	Examples . . . . .	204
5.3.	Eigennilpotents . . . . .	207
5.3.1.	Simple properties. . . . .	207
5.3.2.	Jordan structure of the eigennilpotents . . . . .	208
5.3.3.	Transformation of the system $P_1(\zeta), P_2(\zeta), \dots, P_l(\zeta)$ and of the eigennilpotents . .	209
5.4.	Weakly splitting points . . . . .	211
5.4.1.	Strongly normal points . . . . .	211
5.4.2.	Weakly splitting points . . . . .	212
5.4.3.	Connection between strongly normal and weakly splitting points . . . . .	213
5.4.4.	Examples . . . . .	217
5.4.5.	Index and geometric multiplicity for weakly splitting points . . . . .	218
5.5.	Irreducible projections . . . . .	219
5.5.1.	Construction . . . . .	219
5.5.2.	Behavior at splitting points . . . . .	220

5.5.3.	The coefficients $C_{ij}(z)$ . . . . .	220
5.5.4.	Puiseux-Laurent series . . . . .	220
5.5.5.	Poles of $P_i(\zeta)$ at branching points . . . . .	221
5.6.	Jordan vectors . . . . .	222
5.6.1.	Construction . . . . .	222
5.6.2.	Behavior at splitting points . . . . .	222
5.6.3.	Puiseux-Laurent series . . . . .	223
5.7.	Jordan structure of $A(z)$ . . . . .	224
5.7.1.	Invariance of the Jordan structure . . . . .	224
5.7.2.	Jordan normal form of $A(z)$ . . . . .	225
5.7.3.	Transformation of $N(z)$ . . . . .	226
<b>6.</b>	<b>Analytic perturbations</b> . . . . .	<b>227</b>
6.1.	Invariance of the perturbed Jordan structure and perturbation series . . . . .	227
6.1.1.	Jordan structure . . . . .	227
6.1.2.	Perturbation series for eigenvalues and eigenprojections . . . . .	228
6.1.3.	Perturbation series for the irreducible projections . . . . .	228
6.1.4.	Perturbation series for Jordan vectors . . . . .	229
6.1.5.	Perturbation series for Jordan vectors which are continuous at the point $z = 0$ . . . . .	230
6.1.6.	Examples . . . . .	232
6.1.7.	Summary . . . . .	233
6.2.	Connection between the unperturbed and the perturbed Jordan structures . . . . .	234
6.2.1.	Notations . . . . .	235
6.2.2.	Gochberg-Krein inequalities . . . . .	235
6.2.3.	Geometric multiplicity . . . . .	237
6.2.4.	Examples . . . . .	238
6.2.5.	Diagonal perturbations . . . . .	239
6.2.6.	The operator $A(z)^{-1}$ . . . . .	240
<b>7.</b>	<b>Reduction theory</b> . . . . .	<b>242</b>
7.1.	Simple unperturbed eigenvalues . . . . .	243
7.1.1.	Perturbation of eigenvalues and eigenprojections . . . . .	243
7.1.2.	Perturbation of eigenvectors . . . . .	244
7.1.3.	Holomorphic diagonalization of perturbations . . . . .	246
7.1.4.	Non-simple unperturbed eigenvalues . . . . .	247
7.2.	Reduction process for normal and selfadjoint perturbations . . . . .	247
7.2.1.	Elementary reduction . . . . .	248
7.2.2.	Reduction process . . . . .	249
7.2.3.	Iteration of the process . . . . .	255
7.2.4.	Calculation of group projections and mean values of $(\lambda_0 + z\lambda_0)$ -groups for $A(z)$ . . . . .	257
7.2.5.	Splitting problems . . . . .	259
7.3.	Reduction process for semisimple eigenvalues . . . . .	264
7.3.1.	Reduction process . . . . .	265

7.3.2.	Holomorphy criterion for perturbed eigenvalues . . . . .	269
7.3.3.	Holomorphic diagonalization of perturbations . . . . .	270
7.3.4.	Implications and applications . . . . .	271
7.3.5.	Iteration of the reduction process . . . . .	274
7.4.	Reduction process for non-semisimple eigenvalues . . . . .	276
7.4.1.	Preparatory propositions . . . . .	279
7.4.2.	Application . . . . .	288
7.4.3.	Preparatory propositions (continuation) . . . . .	290
7.4.4.	Reduction operator and its properties . . . . .	290
7.4.5.	Reduction process . . . . .	293
7.4.6.	Lidskii operators . . . . .	297
7.4.7.	Condition 1 and the Lidskii operators . . . . .	301
7.4.8.	Holomorphic decompositions of group projections . . . . .	303
7.4.9.	Subgroups of perturbed eigenvalues and their asymptotics . . . . .	305
7.4.10.	Zero-order approximations of perturbed eigenvectors of $Q_p^g$ -groups . . . . .	308
7.4.11.	Special cases . . . . .	310
7.4.12.	Example . . . . .	313
7.4.13.	Calculation of the perturbation series by recursion . . . . .	314
7.5.	Bifurcation equations . . . . .	317
7.5.1.	Derivation of the bifurcation equations . . . . .	318
7.5.2.	Simple unperturbed eigenvalue . . . . .	319
8.	<b>Numerical analysis for perturbation series — convergence radii and error estimates</b> . . . . .	<b>321</b>
8.1.	Estimates for group projections and mean values (first method) . . . . .	323
8.1.1.	Radii of convergence . . . . .	323
8.1.2.	Special lower bounds for the radii of convergence . . . . .	325
8.1.3.	Further specialization if the unperturbed operator $A_0$ is normal . . . . .	326
8.1.4.	Estimates of the coefficients and errors for the mean value . . . . .	327
8.2.	Method of majorizing series . . . . .	327
8.2.1.	Majorizing series for $H(z) (\lambda - A_0)^{-1}$ . . . . .	327
8.2.2.	Majorizing series for $\lambda(z) - \lambda_0$ . . . . .	328
8.2.3.	Example . . . . .	329
8.2.4.	Other majorizing series . . . . .	331
8.3.	Recursive majorizing series . . . . .	332
8.3.1.	First relation for a majorizing function . . . . .	332
8.3.2.	Second relation for a majorizing series . . . . .	334
8.3.3.	Combination . . . . .	335
8.3.4.	Estimates of radii of convergence of majorizing series . . . . .	336
8.3.5.	Special case, $n = 1$ . . . . .	338
8.3.6.	Iterative methods for calculating eigenvalues and eigenvectors . . . . .	340
9.	<b>Polynomial operator-valued functions</b> . . . . .	<b>341</b>
9.1.	Basic concepts for polynomial operator-valued functions . . . . .	341
9.1.1.	Characteristic values and eigenvectors . . . . .	341

9.1.2.	Keldyš chains, multiplicity of eigenvectors and canonical systems . . . . .	342
9.1.3.	Motivation of the concept "Keldyš chain" . . . . .	343
9.2.	Assignment of linear polynomial operators . . . . .	344
9.2.1.	Assignment . . . . .	344
9.2.2.	Assignment of Keldyš chains . . . . .	345
9.2.3.	Determination of canonical systems. . . . .	347
9.2.4.	Reduction of the problem to linear polynomial operators of the form $1 + \lambda C$ . . . . .	347
9.2.5.	Keldyš chains of $L(\lambda) = 1 + \lambda C$ . . . . .	348
9.2.6.	Canonical systems of $L(\lambda) = 1 + \lambda C$ . . . . .	350
9.3.	Analytic perturbation theory for polynomial operator-valued functions . . . . .	351
9.3.1.	Perturbation theorem . . . . .	351
9.4.	Connection of perturbed and unperturbed canonical systems . . . . .	354
9.4.1.	Notations . . . . .	354
9.4.2.	Gochberg-Krein inequalities . . . . .	355
<b>10.</b>	<b>Analytic perturbations in Banach spaces . . . . .</b>	<b>357</b>
10.1.	Holomorphic vector- and operator-valued functions on Banach spaces. . . . .	358
10.1.1.	Banach spaces and bounded operators . . . . .	358
10.1.2.	Holomorphic vector-valued functions . . . . .	358
10.1.3.	Holomorphic operator-valued functions . . . . .	359
10.2.	Closed operators and elementary spectral properties . . . . .	359
10.2.1.	Definition and elementary properties . . . . .	359
10.2.2.	Spectrum and resolvent for closed operators . . . . .	360
10.2.3.	Decomposition theorem . . . . .	361
10.2.4.	Isolated points of the spectrum . . . . .	361
10.2.5.	Finite systems of eigenvalues . . . . .	363
10.2.6.	Adjoint operator . . . . .	363
10.3.	Holomorphic operator-valued functions whose values are from $\mathcal{C}(X)$ . . . . .	364
10.3.1.	Definition of holomorphic operator-valued functions . . . . .	364
10.3.2.	Holomorphic operator-valued functions of type $\mathbf{A}$ . . . . .	364
10.4.	Holomorphic and closed perturbations of closed operators . . . . .	365
10.4.1.	Behavior of isolated parts of the spectrum . . . . .	365
10.4.2.	Case of a finite eigenvalue system . . . . .	366
10.4.3.	Transfer of some results of the finite-dimensional theory . . . . .	367
<b>Supplement.</b>	<b>Analytic perturbations for linear operators depending on several complex variables . . . . .</b>	<b>371</b>
S 1.	Introduction . . . . .	371
S 2.	Holomorphic operator-valued functions of several complex variables . . . . .	372
S 3.	Holomorphic operator-valued functions of several complex variables whose values are operators acting on a finite-dimensional complex linear space . . . . .	376
S 3.1.	Spectral representation of $A(z)$ . . . . .	377

S 3.2.	Algebraic determination of the eigenprojections . . . . .	381
S 3.3.	Properties of the eigennilpotent . . . . .	385
S 3.4.	Jordan structure of $A(z)$ . . . . .	387
<b>Appendix. Basic material from complex function theory and algebra . . . . .</b>		<b>388</b>
A 1.	$n$ -Valued algebroid functions over a region $G$ . . . . .	388
A 1.1.	Meromorphic elements . . . . .	388
A 1.2.	Analytic continuation . . . . .	389
A 1.3.	Analytic functions over $G$ . . . . .	390
A 1.4.	Singular points. . . . .	391
A 1.5.	Branching and algebroid branching . . . . .	392
A 1.6.	$p$ -Valued algebroid functions. . . . .	393
A 2.	Polynomials with meromorphic coefficients . . . . .	394
A 2.1.	Basic concepts . . . . .	394
A 2.2.	Divisors . . . . .	395
A 2.3.	Division algorithm . . . . .	395
A 2.4.	Euclidean algorithm . . . . .	396
A 2.5.	Greatest common divisor . . . . .	396
A 2.6.	Decomposition into prime factors. . . . .	397
A 3.	Polynomials from $\mathcal{M}[\lambda]$ considered as polynomials from $\mathbb{C}[\lambda]$ . . . . .	398
A 3.1.	Relatively prime polynomials . . . . .	398
A 3.2.	Behavior of irreducible polynomials. . . . .	399
A 4.	Local factor decompositions of polynomials from $\mathcal{M}[\lambda]$ . . . . .	399
A 4.1.	Factor decompositions of normalized polynomials . . . . .	399
A 4.2.	Simple roots . . . . .	402
A 4.3.	Total decomposition of a normalized polynomial . . . . .	402
A 5.	Irreducible polynomials and finite-valued algebroid functions . . . . .	402
A 5.1.	Preliminaries . . . . .	402
A 5.2.	$n$ -Valued algebroid functions over $G$ and their irreducible equations. . . . .	403
A 5.3.	Definition of $n$ -valued algebroid functions by irreducible polynomials . . . . .	404
A 5.4.	Consequences . . . . .	406
A 6.	Algebroid function fields . . . . .	407
