Contents

Preface

Introduction 1

1. Preliminaries 7
   - §1. The marriage problem 7
   - §2. Birkhoff's theorem 11
   - §3. Majorization 11
   - §4. Tensor products 14
   - Notes and references 16

2. Singular values and norms 18
   - §5. Singular values and polar decomposition 18
   - §6. The minmax principle 20
   - §7. Symmetric gauge functions and norms 24
   - Notes and references 31

3. Spectral variation of Hermitian matrices 34
   - §8. Weyl's inequalities 34
   - §9. The Lidskii - Wielandt theorem 38
   - §10. Matrices with real eigenvalues and Lax's theorem 46
   - Notes and references 50

4. Spectral variation of normal matrices 52
   - §11. Introduction to chapter 4 52
   - §12. The Hausdorff distance between spectra 53
   - §13. Geometry and spectral variation I 55
   - §14. Geometry and spectral variation II 63
   - §15. The Hoffman - Wielandt theorem 74
   - §16. Perturbation of spectral spaces 76
   - §17. The cyclic order 82

§18. An inequality of Sunder 85
Notes and references 86

5. The general spectral variation problem 89
§19. The distance between roots of polynomials 89
§20. Variation of Grassman powers and spectra 94
§21. Some more spectral variation bounds 99
§22. Spectral variation for the classical Lie algebras 104
Notes and references 105

6. Arbitrary perturbations of constrained matrices 108
§23. Arbitrary perturbations of Hermitian matrices and Kahan's results 108
§24. Arbitrary perturbations of normal matrices 112
§25. The Bauer-Fike theorem 113
Notes and references 116
