Introduction	
Notational conventions	
Chapter 1. Basic definitions	1
Chapter 2. The invariant bilinear form and the generalized Casimir operator	15
Chapter 3. Integrable representations and the Weyl group	26
Chapter 4. A classification of generalized Cartan matrices	41
Chapter 5. Real and imaginary roots	54
Chapter 6. Affine Lie algebras: the normalized invariant bilinear form, the root system and the Weyl group	69
Chapter 7. Affine Lie algebras: the realization (case $k = 1$)	80
Chapter 8. Affine Lie algebras: the realization (case $k = 2$ or 3). Application to the classification of finite order automorphisms	98
Chapter 9. Highest weight modules	114
Chapter 10. Integrable highest weight modules: the character formula	132
Chapter 11. Integrable highest weight modules: the weight system, the contravariant Hermitian form and the restriction problem	149
Chapter 12. Integrable highest weight modules over affine Lie algebras. Application to η -function identities	166
Chapter 13. Affine Lie algebras, theta functions and modular forms	182
Chapter 14. The principal realization of the basic representation. Application to the KdV-type hierarchies of non-linear partial differential equations	210
Index of notations and definitions	251
